EXCURSUS IV. THE RECONSTRUCTED CAESAREAN TEXT OF MARK I, VI, AND XI	396

THE discussion of the Caesarean text, like so much in the textual criticism of the gospels, really begins with Griesbach,¹ who in 1811 pointed out that Origen used different texts in his commentaries on Matthew and on John. About 1896 either Hort or, more probably, Sanday² made the further statement that Codex 1 resembled the text of Origen. This led to the editing of Codex 1 and its allies³ and their identification as part of a larger family, which included Codices 565, 28, 700, and the Ferrar group. The editor was very doubtful whether the connection with Origen and Caesarea could be maintained, and he did not discuss the point in that volume. He had mentioned it in the first edition of his "Text of the New Testament," but dropped it in later ones, though it has now been restored, thanks to Streeter's investigations, in a new edition.⁴ The reason for his missing the facts was that he was secretly enamored of a suggestion, which he could not prove and therefore did not make, to the effect that the text of family 1 was a degenerate representative of the Greek which underlies the *Evangelion da-Mepharreshe*.

Very little attention was paid to "Codex 1 and its Allies." The next step was taken by Hermann von Soden, who adopted a different classification, and his work appeared at first to have refuted previous theories and rendered them valueless. Von Soden of course recognized the existence of family 1, but he made it part of a larger family (H' or I') of which it and Codex 22 formed sub-groups.⁵ It is very doubtful whether he was right in this, at least in Mark.⁶ His scheme⁷ separated family 1 and family 13 from each other and from the rest of the larger

⁷ Pp. 1276 ff.

group which had been indicated in "Codex 1 and its Allies," and he submerged Θ , 565, 700, and 28 in the group which he called I^a . The group including family 1 he called I' in his apparatus, and H^r in his introduction. Family 13 he called I' in his apparatus and J in his introduction. Unfortunately he also added Codex Bezae to the group I^a . His theory was that this group of mss. forms the best representative of a Jerusalem recension, found in the quotations of Eusebius; that the text of D is much contaminated by Latin influences, but otherwise belongs to the same group as Θ , 565, 700, and 28 and is the best representative of the I-text; and that family 1 and family 13, though generally speaking they preserve the I-text, represent two different and inferior lines of attestation. From the first von Soden was criticized for his treatment of D, but for some time it was not recognized that he was wrong in separating family 1 and family 13 from Θ , 565, 700, 28.

The next step forward was made in 1923 in an article in the *Harvard Theological Review* ⁸ which pointed out the true relations between these mss., reviving and adding to the paragraphs in "Codex 1 and its Allies." The writers then thought not of Caesarea but of a locality farther east as the possible home of the text. It must indeed be admitted that the author of "Codex 1 and its Allies" had entirely forgotten that he had ever thought of Caesarea and could hardly believe it when, a little later, the reviser of his "Text of the New Testament" confronted him with the printed statement in the first edition (p. 21).

Meanwhile Canon Streeter in Oxford was busy in the preparation of his book, "The Four Gospels." ⁹ He accepted the results of the article in the *Harvard Theological Review*, and added to them the very important point that the text of the family was used by Origen in Caesarea. Following the analogy of the symbols 'fam¹' and 'fam¹³' he used the term 'family Θ ' for the whole group.

Streeter was certainly right in saying that the evidence proves

⁸ K. Lake and R. P. Blake, 'The Text of the Gospels and the Koridethi Codex,' in *Harvard Theological Review*, XVI, 1923, pp. 267 ff.

⁹ B. H. Streeter, *The Four Gospels: A Study of Origins*, London, 1924.

conclusively that Origen used the text of family Θ while he was in Caesarea, but unfortunately the suggestion that the change in Origen's text corresponds to his change of residence is not wholly supported by the facts, and we have devoted a section of the present article to a somewhat fuller statement and discussion of the text of Origen.

The next step in the unravelling of the problem was taken in time to be announced by Streeter in his "Four Gospels." R. P. Blake, then in Oxford, called Streeter's attention to the Georgian version, and Streeter at once perceived that the Georgian version in its oldest form clearly belonged to the same group as Θ . The two did not, however, work out the implications of this discovery, which are treated at length in the present article.

Immediately after this, the three writers of the present article formed a committee of inquiry into the Caesarean text. Our original plan was to edit the Caesarean text of the Gospel of Mark. This plan we have not wholly abandoned, but it will require more time than we at first supposed, and we here present an interim report, consisting of three sections:

I. The evidence of Greek mss., with a tabular presentation of the variants in Mark i, vi, and xi, and some suggestions as to the relations between the various manuscripts. For the sake of clearness a discussion of the later widely current text, which is a necessary though subordinate part of this study, is removed to Excursus I; and we have ventured to substitute the term 'Ecclesiastical' for the more familiar, but possibly misleading, 'Antiochian' or 'Byzantine.' In Excursus IV we give the reconstructed text of Mark i, vi, and xi.

II. Patristic evidence, consisting of the quotations in the two great Caesarean writers, Origen and Eusebius. This investigation confirms the localization of the text at Caesarea, but gives a somewhat different color to Streeter's discovery and raises an important problem as to the provenance of the Neutral text.

III. The evidence of Georgian, Armenian, and Syriac versions. It seemed desirable, inasmuch as the Georgian version is one of the best witnesses to this text, to include as Excursus II

a longer statement as to the date of the Georgian version. The Georgian and Armenian versions are probably both based on a Syriac version of Caesarean type, and we believe that we succeed in showing that this version is best represented in Syriac by the so-called Palestinian Syriac, which exists in a tolerably complete lectionary form in the *Evangeliarium Hierosolymitanum* and also in a few older fragments of continuous text. Our researches at one time raised the suspicion that the text of family Θ was used in the margin of the Harclean Syriac. Investigation of this point proved to have little importance for the elucidation of the Caesarean text but to be valuable for the understanding of the Harclean, and we have printed it as *Excursus III*.

Finally, it seems desirable to emphasize again that our studies have been designedly limited to the text of Mark. It is quite possible that the situation is different in the other gospels; but the examination of this question must be reserved for another article.

I. THE EVIDENCE OF GREEK MANUSCRIPTS

THE Greek manuscripts which we discussed in this REVIEW in 1923 were Θ fam¹ fam¹³ 28 565 and 700. Four additions might reasonably be made to these: (a) The group which von Soden calls Φ and Streeter refers to as family 1424, (b) Codex 1071, (c) Berlin P. 13416, (d) Codex W. Of these we have ignored the first because, though Streeter is doubtless right in regarding it as at least containing a Caesarean element, it is probably less important than any of the other witnesses, and properly to reconstruct its evidence would have added more to the labor of preparing this article, and delayed its publication longer, than we thought tolerable. Codex 1071 is certainly a weak Caesarean manuscript, but it seems to us scarcely good enough to include at present, though it would have to be considered in a full edition of the Caesarean text. The Berlin fragment P. 13416 stands on a different level. It is unfortunately very short, but so far as it goes it is extremely good. We have printed it separately before the Tables. Codex W in Mark vi ff. is clearly Caesarean, though not one of the best witnesses, and we have included it in our Tables for chapters vi and xi.

The Berlin Fragment

The most important new contribution to our knowledge of the witnesses for the Θ -family was made by A. H. Salenius of Helsingfors by his publication of P. 13416, from the Berlin collection of papyri, in the *Zeitschrift für die neutestamentliche Wissenschaft*, xxvi, 1927, pp. 101 ff.

Berlin P. 13416 is a vellum fragment of the seventh century, and was purchased at Hermoupolis (Eschmunein) in Egypt. It is not included in von Soden's or Gregory's lists. The following collation of Salenius's transcript with the Textus Receptus shows that the fragment comes from a codex which was strongly marked by Caesarean readings. The variant $\omega\varsigma \epsilon\upsilon\rho\eta\sigma\omega\nu$ for $\epsilon\iota \alpha\rho\alpha \epsilon\upsilon\rho\eta\sigma\epsilon\iota$ in xi. 13 is specially characteristic. But the fragment also contains an unusual number of singular readings,

and suggests either that the variation within the Caesarean text may have been greater than the existing evidence would indicate, or that the correction of manuscripts to the standard of the Ecclesiastical Text went even further than we had thought. Readings marked with an asterisk appear to be singular readings.

Tables of Variants

In the following Tables of Variants (pp. 216–246) we present, as accurately as we can, the evidence of Θ fam¹ fam¹³ 28 565 700 W and the Georgian version, adding at the left the chief supporting evidence from outside for the Caesarean text, and at

the right giving the Textus Receptus with its chief supporting evidence. The letter 'f' indicates that the ms. in question gives the non-ecclesiastical reading. When there is double or triple variation within the family, the divergent readings are given below the main reading with the evidence for each. In the Tables these variants are indicated by the numbers attached to them. In many cases they are merely variations of one original, but this is not always so. We abandoned the attempt to use von Soden's apparatus, and confined ourselves to Tischendorf and to the editions of individual manuscripts. Nor have we quoted the evidence with complete fullness, especially that in support of the Textus Receptus. Variations of spelling have been given only where they seemed of some significance, e.g. *vaṣapeθ* for *vaṣaper*, but not *κραββατοις* for *κραβατοις*.

Fam¹ and fam¹³ are quoted as groups. Singular variants in any manuscript within either group are not quoted; nor are manuscripts of either group cited when they have the reading of the Textus Receptus against a reading in the reconstructed text of the group. In cases, however, where the reconstructed text of the group agrees with the Textus Receptus and one manuscript within the group has a variant reading found elsewhere in the Caesarean family, this variant reading is given. It should be observed that the text of fam¹³ has not yet been reconstructed finally (see pp. 327 f.).

Variants which are not elsewhere attested are given in separate lists at the end of the tables, except when they have already been included as second or third variants.

The Adysh manuscript of the Georgian is quoted as G¹, the two manuscripts of the edition of Benešević as G², and when there is a variant between them, the Opiza manuscript is called A and the Tbet' manuscript B. The Georgian mss. are discussed below, pp. 290–294.

With some hesitation we have not included the evidence of Origen and Eusebius. Their quotations, though invaluable as a 'control,' are not extensive enough to be represented in the Tables without a wrong impression being created when they are silent. For the testimony of these writers the next section (pp. 258–285), in which it is given, must be consulted.

The evidence presented in the two extreme columns, on left and right, is a selection, not a full statement, from Tischendorf's apparatus, which, except in rare instances, we have not attempted to verify. We have, however, added the evidence of the Sinaitic Syriac and, in Mark i, that of Codex W, which in this chapter is probably not Caesarean, but has many interesting readings.

30	αποκριθητε] dicite	“	“
32	post γαρ add prophetam	“	“

Analysis of the Tables

Analysis indicates that the following points are noteworthy⁷:

(1) The Tables show 392 variants found in at least two members of the Caesarean family. Of these

565 contains.....	221 (56%)
Θ	198 (50%)
Georgian.....	178 (45%)
28	168 (42%)
700	167 (42%)
W (not including variants in ch. i, where it is not Caesarean)....	130 (40%)
fam. 1	137 (35%)
fam. 13	125 (31%)

(2) Besides these there are 168 variants from the Textus Receptus found in only one member of the family, but with such outside support as to make them deserve consideration. The distribution of these is as follows:

Georgian.....	49
Θ	27
565	26
W (in two chapters)	18
fam. 1	15
fam. 13	15
700	10
28	8

The character of the outside support given to these variants is remarkably diverse. It is convenient to begin with the Greek

⁷ In these and the other statistics presented in this article the reader must be warned that although great pains have been taken to make the figures accurate, yet absolute accuracy cannot be guaranteed. Slight errors may have been made in computing, and the verification necessary for eliminating these would have produced no commensurate result in a matter where only considerable and noteworthy differences of number and proportion are practically significant. Moreover the statistics had to be made from the form in which the Tables were first completed. Later changes in judgment and corrections due to repeated verification of the Tables have in a very few instances been found necessary. These could not be allowed for in the statistics. To have taken account of them would probably have caused a slight, but not appreciable, difference in the statistics; it would not have affected in the least the inferences to be drawn from them.

mss. The 'singular'⁸ variants in Θ and 565 are about equally numerous but exactly opposite to each other in textual character. Θ has 16 Neutral and Alexandrian readings, 5 'Western' and Neutral, and only 3 'Western' readings, of which one is found both in Latin and Syriac, one in D and the Latin only, and one in the Syriac only. On the other hand 565 has 3 Neutral, 2 Alexandrian, and 16 'Western' variants; of the 'Western' all are found in the Latin 'Western' authorities and only two in the Syriac also. 700, although its singular variants are less numerous, is of exactly the same type as 565; it has 8 'Western' readings (seven in the Latin and one in the Syriac) and one Alexandrian. In the other members of the family the character of the variants is more equally divided, except that W and to a less extent fam¹ seem to have an unusual amount of agreement with the Old Syriac. Thus Θ stands out as having a special strain of Neutral variants, and 565 and 700 show an equally remarkable number of 'Western' readings. It is interesting that a preponderance of Neutral singular readings similar to that found in Θ is also a characteristic of G¹ (see p. 310).

(3) The problem of the Georgian version is more complicated. As is shown on p. 295, it was originally made from the Armenian, which at that time must have been an almost pure representative of the Caesarean text, though with some readings taken from the Old Syriac. In the course of generations both Armenian and Georgian were revised, and neither original version is now extant. The Georgian, however, in the Adysh, Opiza, and T'bet mss. represents an older stage than any now extant in the Armenian. It is, therefore, natural that many Caesarean readings lacking in the extant Armenian should be found in the Georgian.

A consideration of the tables shows that the Georgian is only slightly inferior in value to 565 and Θ, and that its attestation of Caesarean readings is about equally divided between G¹ and G². A majority of the Caesarean readings found in the Georgian are preserved in both recensions, but those found only in one or the other are relatively numerous, and there is no

⁸ That is to say, found in only one member of the family; they are, of course, not 'singular' in the usual sense of being wholly unsupported.

marked superiority in this respect attaching to one recension over the other. This means that the text of the Adysh ms. and that of the T'bet and Opiza mss. (A and B) have been about equally revised by the Ecclesiastical text, probably in both cases through an Armenian text partly conformed to the Ecclesiastical type. These revisions of the Georgian doubtless removed a considerable number of Caesarean readings which were in the original version, but they did not always affect the two recensions at the same points. In their present form the Adysh ms. is slightly less Ecclesiastical than either A or B separately, but A and B together are perhaps slightly better than the Adysh ms.

The Georgian has many more singular variants than any Greek ms.; of these, 15 are common to both recensions, 7 are found only in the Adysh ms., 17 in both A and B of G², 9 in B only, and none in A only. Their character (like that of the Caesarean text in general) is partly Neutral and partly 'Western,' but the Old Syriac supports them more frequently than it does any of the Greek mss. of the family except W. Some of these singular variants (two are confirmed by the Berlin fragment) may represent the true Caesarean text; some may be due to Syriac infection derived from the Armenian. A further complication arises from a comparison of the Caesarean readings in the Georgian with those in the extant Armenian, for it seems to indicate that the recension represented by the Adysh ms. had undergone an earlier revision by a Neutral, rather than an Ecclesiastical, standard, in addition to a later Ecclesiastical revision similar to that undergone by G². This is shown by the fact that in 29 cases A and B preserve Caesarean readings which are neither in the Adysh ms. nor in the Armenian, and that in every one of these cases the attestation for the Adysh reading is Neutral and Ecclesiastical. (There is only one case in which A and B agree with the Armenian and the Textus Receptus against the Adysh ms.) These Neutral readings of course survived in the Adysh ms. chiefly because they were also found in the Ecclesiastical text, but they cannot be regarded as primarily Ecclesiastical, for if they were the result of an Ecclesiastical revision, they would have the mixed

character of that text and not be exclusively Neutral. It is also very important to notice that this Neutral character does not apply to readings found in both Georgian recensions, but is a peculiarity of G^1 when it is unsupported. The variants from the *Textus Receptus* attested by the two recensions have the mixed type of the Caesarean text, and are almost all proved to be Caesarean by Greek attestation.

On historical grounds it is very improbable that this Neutral revision of the Georgian came directly from Greek sources, and consequently the facts seem to indicate that the Armenian version at an early, but not the earliest, stage of its history was revised by a Greek Neutral text. This affected the archetype of G^1 but not of G^2 . Later the Armenian was still further revised by Ecclesiastical texts, and this independently influenced the existing mss. of G^1 and G^2 . Neither of these Georgian recensions was as thoroughly revised as the now extant Armenian; hence many early readings survive in Georgian which have been eliminated from all Armenian mss.

In connection with what has just been said it is natural to think of the Neutral revision which seems to have affected Θ , but a comparison of readings does not suggest any marked connection between the Neutral readings in Θ and those in the *Adysh* ms. Probably all that can be said — and it is not unimportant — is that the evidence of Θ and that of the *Adysh* ms. coincide to prove that at some period later than the first appearance of the Georgian version there was a tendency both in Greek and Armenian circles to correct the Caesarean text by Neutral copies.

(4) That a common text is shared by these authorities is clear, but any attempt to divide the family into smaller groups of manuscripts results in remarkable and instructive failure. Those mss. which have already been grouped as family 1 and family 13 had common ancestors, not far removed from the existing codices; but apart from this no two members of the Caesarean family show evidence of any close relationship.

It is possible, however, that research may establish a family tree, and there are indications which might be followed up. Family 1, W, and the Georgian have more variants in com-

mon with the Sinaitic Syriac than have the other Caesarean manuscripts, and moreover share a rather large number of sub-singular readings. But, on the other hand, 28 and W have several curious errors in common, although there is no other evidence of close relationship between them. 565 and 700 both belong to the more 'Western' branch of the group, in contrast to Θ , yet each shares as many readings with Θ alone as with the other of the two or with the Georgian. In fact these four, the best authorities for the Caesarean text, are all closer to each other than to any of their poorer relations. But this only means that they are better representatives of the original Caesarean text and have been less thoroughly corrected by the Ecclesiastical text.

The relative independence of the individual manuscripts of the family renders all the more striking the fidelity with which one or the other supports a selection of variants for which other attestation oscillates between the most widely separated textual types. The reason for grouping together the manuscripts in the Caesarean family is not merely that they often agree, but that they agree in the character of the selection which they make, giving now a reading from purely Neutral manuscripts, then one found only in D and the European Latin, to be followed by one peculiar to the Old Syriac or found only in the Caesarean family.

II. PATRISTIC EVIDENCE

The preceding discussion proves that the group of manuscripts studied includes remains of a common text corrupted in different ways in the several manuscripts under the influence of Ecclesiastical standards. They do not, however, in themselves afford any evidence as to the date or provenance of the text which was thus corrupted; nor is it demonstrated that the non-ecclesiastical readings all came from the same source. At this stage therefore it is necessary to turn to the evidence of quotations in the church fathers. This evidence is always the guiding star of the textual critic in his effort to localize and date a text. It was, for instance, only by the aid of Cyprian's quotations that the Latin manuscripts Codex Bobiensis (k) and Codex Floriacensis (h) were identified as singularly good representatives of the African Latin of the third century, and the Codex Palatinus (e) as a slightly less valuable member of the same family. Moreover, now that the African text is securely established, its influence can be recognized in many sporadic variants in other Latin manuscripts.

In the Greek field relatively little has as yet been done in localizing the manuscripts or texts by this means, and students of Greek texts have been far outstripped by the investigators of the Latin and Syriac New Testament. We are therefore fortunate in now being able clearly to identify the family text of the manuscripts that have been discussed as the one used in Caesarea by both Origen and Eusebius. It is true that for a short time after reaching Caesarea Origen used not this type but a tolerably pure form of the Neutral text. This raises problems which must be discussed later. But for the present purpose the important point is that for Origen's quotations, from Mark xii-xvi made in the later books of his Commentary on John (beginning with book xi), and for his quotations from all parts of Mark made in his subsequent writings, he used the text of our group of manuscripts. Moreover Eusebius always used that text. This is sufficient evidence to permit us to assign it a date and a locality.

Origen

The textual character of the New Testament used by Origen can be made out from his quotations. The great majority of those from Mark are found, naturally enough, in his commentaries on Matthew and John. There occur also a few quotations in his other works, especially *De Principiis* and the *Exhortation to Martyrdom*, but in many of his writings there are no quotations from Mark of sufficient definiteness to fix the character of the text.

In his book, "The Four Gospels," Streeter drew attention to the fact that the quotations represent two distinct textual types, one which may, roughly speaking, be called Neutral, the other consistently found only in Θ and its allies. He argued that this change of text is to be connected with Origen's change of residence from Alexandria to Caesarea; that he used the Neutral text in Alexandria and the Θ -text in Caesarea.

In the surviving portions [says Streeter] of the first ten books of his *Commentary on John*, Origen used the BS text of Mark; but in the later books of this work, in his *Commentary on Matthew* and his *Exhortation to Martyrdom*, he used a text practically identical with that of *fam.* Θ . The *Commentary on John* was begun in Alexandria but finished at Caesarea, and both the other works mentioned were written at Caesarea (p. 78).

Again he says:

Two points became clear. (a) The difference noticed by Griesbach between the use of an "Alexandrian" and of a "mixed" text of Mark corresponds to the change, not from the earlier to the later chapters of Mark, but from the earlier to the later books of the *Commentary on John*. (b) Both this "mixed" text of Mark and the so-called "Western" text used in the *Commentary on Matthew* and in the *Exhortation to Martyrdom* are practically identical with the text of *fam.* Θ . At once we notice the salient fact that the change in the text used corresponds, roughly speaking, to a change of residence (p. 92).

We know from Eusebius that Origen's *De Principiis* and the first five books of the *Commentary on John* were written in Alexandria, and that all the other books of the *Commentary on John*, as well as the *Commentary on Matthew* and the *Exhortation to Martyrdom*, were written in Caesarea.

Eusebius (*Hist. Eccl.* vi. 24, 1) says:

ἐν μὲν τῷ ἔκτῳ τῶν εἰς τὸ κατὰ Ἰωάννην Ἑξηγητικῶν σημαίνει τὰ πρότερα πέντε ἐπ' Ἀλεξανδρείᾳ ἐτ' ὄντα συντάξαι.

The passage to which Eusebius here refers is *In Ioh.* vi. 2, 8 (p. 107 of the Berlin edition):

καὶ μέχρι γε τοῦ πέμπτου τόμου, εἰ καὶ ὁ κατὰ τὴν Ἀλεξανδρείαν χειμῶν ἀντιπράττειν ἐδόκει, τὰ διδόμενα ὑπηγορεύσομεν, ἐπιτιμῶντος τοῖς ἀνέμοις καὶ τοῖς κύμασι τῆς θαλάσσης τοῦ Ἰησοῦ· καὶ ἔκτου δὲ ἐπὶ ποσὸν προεληλυθότες ἐξειλκύσθημεν ἀπὸ γῆς Αἰγύπτου, ῥυσσάμενου ἡμᾶς τοῦ θεοῦ τοῦ ἐξαγαγόντος τὸν λαὸν αὐτοῦ ἀπ' αὐτῆς. ἔπειτα τοῦ ἐχθροῦ πικρότατα ἡμῶν καταστρατευσαμένου διὰ τῶν καινῶν αὐτοῦ γραμμάτων τῶν ἀληθῶς ἐχθρῶν τῷ εὐαγγελίῳ καὶ πάντας τοὺς ἐν Αἰγύπτῳ ἀνέμους τῆς πονηρίας καθ' ἡμῶν ἐγείραντος, στήναι μᾶλλον με πρὸς τὸν ἀγῶνα παρεκάλει ὁ λόγος καὶ τηρῆσαι τὸ ἡγεμονικόν, μήποτε μοχθηροὶ λογισμοὶ ἐξισχύσωσι τὸν χειμῶνα καὶ τῇ ψυχῇ μου ἐπεισαγαγεῖν, ἥπερ ἀκαίρως, πρὶν γαλήνην τὴν διάνοιαν λαβεῖν, συνάπτειν τὰ ἐξῆς τῆς γραφῆς· καὶ οἱ συνήθεις δὲ ταχυγράφοι μὴ παρόντες τοῦ ἔχεσθαι τῶν ὑπαγορεύσεων ἐκώλουν. νῦν δ' ὅτε τὰ καθ' ἡμῶν πεπτωμένα πολλὰ σβεννύντος θεοῦ βέλη ἡμβλυνται καὶ ἐνεθισθείσα ἡμῶν ἡ ψύχη τοῖς συμβεβηκόσι διὰ τὸν οὐράνιον λόγον φέρειν ῥᾶον βιάζεται τὰς γεγενημένας ἐπιβουλὰς, ὥσπερ εἰ ποσῆς εὐδίας λαβόμενοι οὐκέτι ὑπερτιθέμενοι ὑπαγορεύειν τὰ ἀκόλουθα βουλόμεθα, θεὸν διδάσκαλον ὑπαχοῦντα ἐν τῷ ἀδύτῳ τῆς ψυχῆς ἡμῶν παρεῖναι εὐχόμενοι, ἵνα τέλος λάβῃ ἡ τῆς διηγήσεως τοῦ κατὰ Ἰωάννην εὐαγγελίου οἰκοδομῇ. γένοιτο δ' ὁ θεὸς ἐπήκοος ἡμῶν τῇ εὐχῇ, εἰς τὸ συνάψαι δυνηθῆναι τὸ σῶμα τοῦ ὅλου λόγου, μηκέτι μεσολαβούσης περιστάσεως διακοπῇ τοῦ εἵρμου τῆς γραφῆς ὁποῖαν δῆποτε ἐνεργήσασθαι δυναμένης. ἴσθι δὲ ὅτι ἀπὸ πολλῆς προθυμίας δευτέραν ταύτην ἀρχὴν ποιοῦμαι ἔκτου τόμου διὰ τὸ τὰ προὑπαγορευθέντα ἡμῖν ἐν τῇ Ἀλεξανδρείᾳ οὐκ οἶδ' ὅπως μὴ κεκομίσθαι· βέλτιον γὰρ ἡγησάμην, ὑπὲρ τοῦ μὴ ἀπράκτως μοι τοῦδε τοῦ ἔργου παρελθεῖν καὶ τοῦτον τὸν χρόνον, ἥδη τῶν λοιπῶν ἄρξασθαι καὶ μὴ μετ' ἀδήλου τοῦ εὐρεθῆσθαι τὰ προὑπαγορευθέντα ἡμῖν ἀναμένων, κέρδος οὐκ ὀλίγον ἀπολέσαι τὸ τῶν μεταξὺ ἡμερῶν. καὶ ταῦτα μὲν αὐτάρκως πεπροοιμιάσθω· ἥδη δὲ καὶ τῆς λέξεως ἐχώμεθα.

These statements, though somewhat prolix, are quite clear. Only books i-v of the commentary on John were written in Alexandria, the rest was written in Caesarea. Therefore, if

Streeter's theory were wholly correct the change in text ought to come after book v, where the change in residence certainly comes. But it does not. It does not come until after book x, as Streeter himself points out elsewhere, though without fully seeing the importance of the difference.

Therefore, to make the facts clear, we have arranged the quotations from Mark in these books of Origen in the following six Lists: (1) the quotations in *De Principiis* and (2) in books i-v of the Commentary on John, which were written in Alexandria; (3) the quotations in books vi-x of the Commentary on John, written in Caesarea; (4) the quotations in the remaining books of the Commentary on John, written in Caesarea; (5) the quotations in the Commentary on Matthew, written in Caesarea; and (6) the quotations in the Exhortation to Martyrdom, written in Caesarea. To these Lists might be added an investigation of the work *Contra Celsum*, but the quotations in this are frequently indirect and we did not attempt the task of analyzing them.

(1) *Quotations from Mark in Origen, De Principiis*

(The pages and lines in parenthesis on the left are those of the Berlin edition.)

- (205, 10) Mk. iv. 12 μη βλέπωσι pro βλέπωσι και μη ιδωσι c. Δ
(cf. Mt., Lk.)
ακουσωσι (Codex B) pro ακουωσι c. CM
33 fam¹³
συνωσι (Codex D) pro συνιωσι c. DL fam¹
- (223, 12) iv. 12 μη βλέπωσι (see above)
om ακουωσι και c. 28 a
συνωσι (Codex D) (see above)
- (47, 11; 138, 11) x. 18 deus + pater. This reading is not found in any manuscript but there is some evidence that it is an early Alexandrian reading known to Clement. In Paed. i. 8, 72 Clement says ου μην αλλ οπηρικα διαρρηδην λεγει ουδεις αγαθος ει μη ο πατηρ μου ο εν τοις ουρανοις. In

Paed. i. 8, 74 he says *αλλα και ουδεις αγαθος ει μη ο πατηρ*. In Strom. v. 10, 63 and vii. 10, 58 he alludes to the same reading, and in Strom. ii. 20, 114 quotes the reading from Valentinus without rejecting it. Origen's preference for the reading is shown by his use of it in his Commentary on John and in the Exhortation to Martyrdom, written in Caesarea.

(2) *Quotations from Mark in Books i-v of the Commentary on John, written in Alexandria, and from the Commentary on Lamentations*

Commentary on John, Books i-v

be a composite quotation partly from
Mark, partly from Matthew xii. 32.
(69, 14) x. 18 ο θεος + ο πατηρ (see above)

Commentary on Lamentations

- (261, 4) xiii. 35 οιδας pro οιδατε
36 ευρησει pro ευρη c. 238 300 472

These lists of variants show that there is scarcely sufficient evidence to prove anything decisive about the character of the text of Mark used by Origen in Alexandria. The quotations in *De Principiis* and that in the Commentary on Lamentations

are little more than references, and the variants in them can hardly be taken seriously. The twice-repeated quotation from Mark x. 18, recurring as it does in the Commentary on John, both in the part written in Alexandria and in that written in Caesarea, and also in the Exhortation to Martyrdom, is of a different nature. As the evidence given above shows, it clearly seems to have been known to Clement of Alexandria. It is all the more remarkable that it is not found in any extant manuscript. This is one of the cases where one is inclined to doubt the judgment of Westcott and Hort, that there are no variations in the gospels due to doctrinal reasons.

Streeter's theory, therefore, that Origen used the Neutral text of Mark in Alexandria, must really rest on the quotation of Mark i. 1-3 in Book i. of the Commentary on John. But it is by no means sure that this passage does not really support an opposite conclusion. In the three verses are four variants from the Textus Receptus; their outstanding feature is not that they are found in Neutral mss., but rather in Θ and its allies. All four are found in Θ: one of them is found in all early authorities, one in the Neutral text and the KΠ-group (K^a), one in Ⲛ (alone among the great manuscripts) and in Irenaeus, and the fourth is found exactly in D and in a slightly variant form in the Neutral text.

It would be absurd to base any certain conclusion on such slight evidence as this, but so far as it goes it suggests that the text of family Θ, rather than that of ⲚB, was used by Origen in Alexandria.

This list gives practically the whole of the evidence on which Streeter actually relied for his contention that Origen used a Neutral text of Mark in Alexandria. It is indeed abundantly plain that the Neutral text was used in these books, but the evidence of Eusebius and of Origen (cf. pp. 259 f.) decisively proves that it was used not in Alexandria but in Caesarea. All these quotations are in books written after he had reached Caesarea. It should be noted that they do not consistently agree with any one manuscript of the Neutral family. A large number of them are found in all the authorities **NBCLΔ**. One variant is found only in C and one only in 33, but none is peculiar to either B or **N** or to **BN**, and none is of the curious 'Western' type noticeable in **LΔΨ**.

This list clearly shows that — as Streeter saw — after book x, and in quotations from Mark later than the middle of Mark xii, as is shown in the list given below, there is a change in the character of the text used. It suddenly becomes clearly identical with that of family Θ. That is to say, instead of consistently agreeing with NBCLΔ, it sometimes agrees with this group and sometimes with various 'Western' authorities, and in this oscillation it agrees with family Θ. In his Commentary on Matthew, which was written later, Origen continued to use this text for the quotations from Mark throughout that gospel, not merely for Mark xii ff. After this there was no further change in the character of his quotations, but, so far as we can see, this text was the text which he used for the rest of his life.

Griesbach thought that the variation in the type of text followed by Origen in his Commentary on John was due to a change in Mark xii in the character of the manuscript which he was using. His words — an admirable example of his lucidity and thoroughness — are worth quoting. He says in Part II of his *Commentarius Criticus*, pp. xxviii ff.

Si scripta Origenis, quae graece supersunt, universim spectas, textus locorum Novi Test. in ipsis laudatorum consonat plerumque ad textum codicum Evangeliorum BCL et Paulinarum epistolarum ABC; qui omnes cum Alexandrinam repraesentent textus recensionem, consequitur, codicem,

quo fere utebatur Origenes, ad eandem recensionem fuisse conformatum. . . . Ad eandem hanc alexandrinam recensionem pertinebat etiam Evangelii *Marci codex, qui praesto fuit Origeni commentarium in I o a n n i s Evangelium scribenti*. Docet id lectionum indiculus supra a me exhibitus et litera A insignitus. Sed paullo distinctius haec exponenda sunt. Nempe *a*) Origenes in commentario in Ioannem e capitibus Marci II. III. IV. V. VII. VIII. XIII. et XVI. prorsus nullos, e capp. vero VI. IX. X. et XV. perpaucos, tandem e capp. I. XI. XII. et XIV. sat multos excitavit locos, cujus rei causa posita est potissimum in eo, quod major pars commentarii hujus interiit, Origenes autem tum demum laudare solet Marcum, ubi parallelus apud Ioannem locos tractat. *b*) Codex Origenianus in capp. I. VI. IX. X. XI. (et probabiliter etiam in II. III. IV. V. VII. VIII.) plane consonavit alexandrinis; inprimis memorabiles sunt capituli XI. versiculi 1-12 quos Origenes Opp. tomo 4, p. 181. integros excitat, et ita quidem, ut in ipsos adeo minutiis alexandrinis libris BCL tantopere concinnat, ut hos ipsos ante oculos positos habuisse videre possit; contra vero *c*) in capp. XII. XIV. XV. (et fortasse etiam in XIII. et XVI.) exemplar, de quo hic loquimur, Origenianum non fuit pure alexandrinum, sed admixtas habuit lectiones non paucas occidentales aliasve. Itaque *d*) exemplar istud e duabus partibus fuerat conflatum, altera pure alexandrina, altera itidem quidem alexandrina, sed mixta. *e*) Quod ad lectiones attinet utrique recensionis communes, et in codicibus BCL aequae atque in D. 1. 13. 28. 69. obvias, hae in allegationibus Origenianis ei, quam quoquo loco potissimum sequitur Origenes recensionis ergo, in commentario in Ioannem, alexandrinae, in comment. autem in Matthaeum, occidentali, attribuendae sunt.

Streeter, however, explained the facts as entirely due to a change of residence on the part of Origen, rather than to a variation in the manuscript used. But Griesbach's observation is accurate. According to our collation the change comes in the middle of Mark xii. Everything after that point comes from the Θ -text; nothing before it can be clearly shown to do so; and this is true of passages quoted by Origen after he has begun to use the Θ -text of the later chapters of Mark, as well as before. The first clear instance of the Θ -text in the Commentary on John is from Mk. xii. 41 on p. 306, but on p. 361 in quoting xii. 26 ff. there are six variants, one of them being in the Θ -text; on p. 386 is a quotation from Mk. ix. 1 with three variants, two unattested, the other ($\epsilon\sigma\tau\eta\kappa\omicron\tau\omega\nu \omega\delta\epsilon$ pro $\omega\delta\epsilon \epsilon\sigma\tau\eta\kappa\omicron\tau\omega\nu$) in fam¹ pesh boh; and on p. 409 there is a variant in the quotation of Mk. i. 24, found in $\aleph\Delta$, but not in any Caesarean Greek mss., though it is found in the Georgian, Armenian, and Eusebius, and on p. 561 there are two variants, neither of them with Caesarean support.

On the whole the evidence, though not enough to be conclusive, suggests that Griesbach was at least partly right and that the change of text in the quotations from Mark in the commentary is to be explained as due to a difference in the text of Origen's copy of Mark before and after the middle of chapter xii. But the quotations from Mark xiv in the earlier parts of the Commentary on John are not from the Θ -text, so that Griesbach's theory is not sufficient by itself. The truth is probably a combination of Griesbach's and Streeter's theories; but it is perhaps impossible to reconstruct the situation in detail. In any case it is obvious from the following list that Origen afterwards found a copy which had the Θ -text throughout and used it exclusively in his commentary on Matthew.

This list fully confirms Streeter's view that Origen used the text of family Θ. Moreover, unlike the evidence of the quotations in the Commentary on John (Lists 2, 3, and 4), it is quite homogeneous, and shows the same type of text throughout.

No one will doubt that these variants show the same general agreement with family Θ which is characteristic of the quotations from Mark in the commentary on Matthew. There are, however, a somewhat large number of singular variants, which may be due, and in some cases almost certainly are due, to the textual history of the Exhortation to Martyrdom, but may also point to the conclusion suggested by the Berlin fragment, namely, that there are a certain number of Caesarean variants which have been eliminated by correction in all the extant MSS.

It is also noteworthy that Origen repeats the characteristic Alexandrian variant (*θεος ο πατηρ*) in Mark x. 18.

The whole evidence shows two points clearly, and suggests other possibilities. It is clear that (1) Origen used the Neutral text in the books of the Commentary on John which he wrote soon after his arrival in Caesarea; (2) in his later writings he used the text of family Θ . It is possible that he used either the Neutral text or the text of family Θ while in Alexandria; there is not enough evidence to settle the point, but what there is somewhat favors family Θ . There is also one striking variant which would connect his text with that used by Clement of Alexandria. Thus, so far as the evidence of Origen is concerned, there is no reason to suppose that he used the Neutral text in Alexandria, and then abandoned it, or was unable to find it, in Caesarea. On the contrary, it is certain that he used the Neutral text during his first years in Caesarea, and it is quite doubtful whether he ever had used it before. Moreover the possibility cannot be entirely excluded that he used the text of family Θ in Alexandria, just as he did later on in Caesarea when he was fully settled down after his rather hurried departure from Alexandria. If so, it follows that although the usage of Origen and Eusebius — typically Caesarean writers — justifies us in giving the name Caesarean to the text of family Θ , it may be only because Origen brought it to Caesarea, not because he found it there; in that case the text which he found in Caesarea was the Neutral text.

Finally, it is perhaps desirable to reiterate the warning previously given, that these conclusions are based only on a study of the text of Mark. The facts may prove to be entirely different in the other gospels.

Eusebius

The quotations in Eusebius from the gospel of Mark are chiefly found in the *Demonstratio Evangelica* and in the *Syriac Theophania*. The tables which follow give the quotations from Mark in these two books collated with the *Textus*

Receptus. They prove beyond doubt that the text used by Eusebius in writing these books was the same as that found in a slightly corrupt form in family Θ.

The quotations from the Theophania are of the same general character as those in the Demonstratio. It is of course antecedently probable that the translator was influenced by existing Syriac versions, but the date of the manuscript (411 A.D.) precludes the possibility that he was influenced by the Peshitto. For further discussion of this point see p. 321.

The patristic evidence adduced in the preceding paragraphs, especially that of Eusebius, proves that the method followed in the Tables (pp. 213–246) gives a reasonably accurate presentation of the text used in Caesarea in the third century.

The text of Origen and Eusebius confirms the theory that our existing manuscripts have been corrected in varying ways by later texts. It will be seen that the text quoted by them is found sometimes in one, sometimes in another of the witnesses which have been examined. Moreover these witnesses agree with the quotations in approximately the same way that our Tables had led us to expect. Θ 565 700 and the Georgian version stand out as distinctly more important than the others. Each of the inferior mss., tested by the standard of Origen and Eusebius, is occasionally right against generally better members of the family, but a text based on Θ 565 700 Grg alone would probably represent the text of Caesarea at the end of the third century almost as well as a text based on the Latin manuscripts a b i ff² would represent the European Old Latin text used in the century before Jerome. In producing such texts the editor would be obliged to give alternative possibilities in his margin.

*The text of Mark xiv. 66–72a as given in Eusebius,
Demonstratio Evangelica, p. 127.*

The degree of accuracy actually reached by our tabular method will appear different to different minds; therefore as a ‘control experiment’ we have taken the longest single quotation from Mark made by Eusebius and printed it with an apparatus giving the evidence for the variants in which Eusebius’ quotation differs from the Textus Receptus. This method of presentation shows more clearly how far a text reconstructed by our methods would be corroborated by Eusebius, and how much variation within the family may reasonably be expected. The quotation as found in Eusebius runs as follows:

Mark xiv. 66-72a

(66) και ουτος του Πιερου εν τη αυλη ερχεται προς αυτον μια των παιδισκων του αρχιερεως (67) και ιδουσα αυτον θερμαινομενον εμβλεψασα αυτω λεγει· και συ μετα Ιησου του Ναζωραιου ης. (68) ο δε ηρνησατο λεγων· ουτε οίδα ουτε επισταμαι τι συ λεγεις. και εξηλθεν εις την εξω προαυλιν και αλεκτωρ εφωνησεν. (69) παλιν δε ιδουσα αυτον η παιδισκη ηρξατο λεγειν τοις παρεστωσιν· ουτος εξ αυτων εστιν. (70) ο δε παλιν ηρνησατο. και μετα μικρον παλιν οι παρεστωτες ελεγον τω Πιερω· αληθως εξ αυτων ει, και γαρ Γαλιλαιος ει. (71) ο δε ηρξατο αναθεματιζειν και ομνυειν οτι ουκ οίδα τον ανθρωπον τουτον ον λεγετε. (72) και ευθεως εκ δευτερου αλεκτωρ εφωνησεν.

The text of Eusebius agrees with the Caesarean family against the Textus Receptus with the support of NBD 3 times, of NB 2 times, D 3 times without other major support. This corresponds closely to the general character of the Caesarean text.

Furthermore the apparatus shows that, with two exceptions, every reading in which Eusebius departs from the Textus Receptus is found in the Greek mss. of the Caesarean family. Of these two exceptions one is probably accidental, the other, by a curious accident of transmission, is found in G². In addition, one variant where the Textus Receptus and Eusebius are in agreement occurs in 565 (και ει συ in vs. 67), but is almost certainly a mistake, and another of like character in 700 (ομνναι in vs. 71), but four other readings require some comment. (a) In vs. 66, the omission of του, found in 700 W, may be accidental and is scarcely important. (b) In vs. 68, συ τι for τι συ, found in 565 W fam¹ and in NBCLΔ 33, may well be the right reading. (c) In vs. 69, the reading of Eusebius (ουτος without οτι) is unique; but Θ 565 700 fam¹³ read οτι και ουτος, which is also without support in any major Greek manuscript (though D reads οτι και αυτος), and since this reading is indicated in the Theophania of Eusebius, we should certainly edit it as the Caesarean text, regarding the variant in the Demonstratio as merely accidental. (d) In vs. 70, περιεστωτες (for παρεστωτες) is read in fam¹ and the Georgian, and is virtually supported by W (περιεστηκοτες), so that it is conceivable that this is the true Caesarean text.

Turning to individual manuscripts, a study of the support given to Eusebius by the various manuscripts of the Caesarean family yields the following results. The total number of vari-

ants from the Textus Receptus in this passage of Eusebius is fourteen. In these 14 cases the Eusebian reading is supported by

565	10 times
700	9 "
Georgian.....	8 "
Θ	7 "
W	6 "
fam. 13	7 "
fam. 1	6 "
28	0 "

It will be seen that except in the case of 28, which seems to have changed its character, these figures correspond with considerable accuracy to those obtained (see above, p. 253) when the Caesarean text is reconstructed by the elimination of readings found in the Textus Receptus. There is only one variant which is not found in one of the group 565 Θ Georg, and though Θ comes out of the statistics for this short passage less well than out of those for the longer stretch of three chapters, and the Georgian and 700 come out a little better, 565 appears, as elsewhere, to be the best single witness.

We submit that in view of the accidents of transmission in the text of a patristic writing for which we have no manuscripts earlier than the tenth century this is a closer agreement between the text of Eusebius and the family manuscripts than we had any right to expect.

III. THE EVIDENCE OF THE ORIENTAL VERSIONS

1. *The Georgian Version*

In such study of the Georgian Bible as has hitherto been made, more attention has been devoted to the Old Testament than to the New Testament. The chief reason for this is that for the Old Testament we possess the ancient and fairly complete Athos manuscript, written in the year 978,¹ and that upon it the interest of scholars has concentrated.² The New Testament has hardly been touched; the only detailed discussion which has yet appeared in print is F. C. Conybeare's study of the text of Acts and of the Pauline epistles.³ It has been shown that in both the Old and New Testaments the Georgian translation belongs fundamentally to the northern Oriental group of versions, and is especially close to the Armenian and the Syriac, but that it has also been subjected to direct Greek influence. Up to the present time the gospels have been but little studied, but reason has been shown for concluding that they were not translated by the same writers who worked on

¹ This is the Athos Codex Iveron No. 1; first described in detail by A. A. Tsagareli, *Свѣдѣнія о памятникахъ грузинской письменности*. Выпускъ I, СПБ. 1886, pp. 1 ff.; cf. also N. Marr, *Изъ поѣздки на Афонъ*. Журналъ Министерства Народнаго Просвѣщенія, 1899, March, T. 322, pp. 1 ff., and Th. D. Žordania, *Описаніе грузинскихъ рукописей Тифлискаго Церковнаго Музея Карталино-Кахетинскаго Духовенства*, т. II (Tiflis, 1902 г.), pp. 35-41, with Blake's remarks in *Harvard Theological Review*, XIX, 1926, pp. 285-286. A detailed description of the ms. will shortly be published in this Review.

² The chief studies of the Old Testament in Georgian are from the pen of N. Y. Marr in the series entitled *Замѣтки по священному писанію древнихъ армянъ и древнихъ грузинъ* (*Христіанскій Востокъ*, 2 (1914), 163-179, 263-274; 3 (1915) 249-262; 4 (1916) 229-245); particularly important is his article: *Эч'міадзинскій фрагментъ древне-грузинской версіи Ветхаго Завѣта*, *ibid.*, 2 (1914), 378-388; cf. also R. P. Blake, 'Ancient Georgian Versions of the Old Testament,' *Harvard Theological Review*, XIX, 1926, pp. 271-297.

³ In particular Conybeare's study, 'The Growth of the Peshittâ Version of the New Testament, illustrated from the Old Armenian and Georgian Versions,' in *American Journal of Theology*, I, 1897, pp. 883-912, and also, 'The Georgian Version of the New Testament,' in *Zeitschrift f. d. neutestamentliche Wissenschaft*, XI, 1910, pp. 232-249, and 'The Old Georgian Version of Acts,' *ibid.*, XII, 1911, pp. 131-140; further bibliography is given by J. H. Ropes, *The Text of Acts* (The Beginnings of Christianity, vol. III), pp. clxxxii-iii.

the other books of the Bible.⁴ The extant complete manuscripts of the Old Georgian New Testament, which were written before the eleventh century, are numerous.⁵ In all cases there seems to be a separate manuscript tradition for the gospels and the Pauline writings, and until modern times they are never found bound together. Revelation, which, strictly speaking, never became canonical among the Georgians,⁶ seems to have been first translated by St. Euthymius the Athonite (circa 978 A.D.),⁷ and is connected with the Greek branch of the tradition and not with the Oriental.⁸ The first version of the gospels and of the New Testament in general must go back to the very beginning of Christianity in Georgia.⁹

⁴ This point is especially emphasized by R. P. Blake in the article cited in note 2, especially pp. 288, 290 ff.

⁵ We give a partial list below (note 21), without making any pretensions to completeness.

⁶ This point is very interesting, and forms a striking contrast to the Greek tradition.

⁷ We possess two old mss. of this translation, which is noted among the works of Euthymius in his vita (P. Peeters, *Histoires monastiques géorgiennes*, Bruxelles, 1923, pp. 8 ff.). Both of them belong to the 10th century, and must very probably have been copied from the archetype. The first is No. 1346 of the Society of History and Ethnography in Tiflis, which was written on the Bithynian Olympus in the monastery of Kranion in the year 978. This ms. was formerly in the monastery of Shio-Mghwimé (see *Bibliographie analytique des ouvrages de M. F. Brosset*, St. Petersburg, 1887, col. 292). The ms. is by the same hand as the Athos Apostolos (Tsagareli, No. 11, *Свѣдѣнія* I, pp. 76 f.) from which Conybeare published the fragments of Acts (above, note 3). Conybeare ascribes the Athos ms. to the 13th century; its real date is 965. Euthymius is mentioned in the Tiflis ms., but without any title. The date of the ms. has caused some question, as it does not fit in with the customary chronology of the saint's life, but this latter needs rectification, as K. Kekelidze has shown (*ქართული ლიტერატურის ისტორია* I, ტფილისი, 1923, pp. 183-184). The text on which the version rests is derived from that of the commentary of Andreas of Caesarea (which follows the text in the ms.), and is a late type (as Mr. H. C. Hoskier kindly informs us). Photographs of this ms. are in the J. P. Morgan collection of ms. photographs at Harvard. The second ms. is No. 397 of the Ecclesiastical Museum at Tiflis (*Žordania*, *Описание* I, pp. 392-395). The text is of the same type, as Blake has determined from personal observation. A series of late (18-19th century) copies also exist at Tiflis, also a ms. of an earlier date on Mt. Sinai (No. 85 = 90, Tsagareli, cf. his *Свѣдѣнія* II, p. 97). Another type of text is contained in the printed text of the Moscow Bible, but its textual affiliation has not been studied.

⁸ This is due presumably to Armenian influence. See F. C. Conybeare, *The Armenian Version of Revelation*, London, 1907, pp. 61 ff.

⁹ A detailed study of the sources and tradition, both Georgian and extraneous, is given in the recent article of K. Kekelidze, *ქართველთა მოქცევის მთავარი*

Some recent discoveries have thrown unexpected light on the earlier history of the Georgian gospels and have added a new and interesting chapter to the history of Georgian literature. At about the same time Professors I. A. Djavakhishvili and R. P. Blake became interested in a Georgian-Hebrew palimpsest fragment which had been published many years earlier by P. K. Kokovtsov.¹⁰ He had deciphered the Hebrew text from the photograph, but the Georgian under-writing was not legible. Blake found the original at Oxford and began to study it with reference to its biblical text,¹¹ while Djavakhishvili was led to investigate the photograph in Kokovtsov's article in searching for manuscript evidence to attest certain peculiar forms of Georgian letters which he had observed in the oldest Georgian inscriptions.¹² Meantime Professor A. G. Shanidze had been studying these inscriptions, and had called attention to certain dialectal peculiarities which appeared in them.¹³ When Djavakhishvili and Blake set to work to decipher the text, they discovered that it was written in a new dialect, or

ისტორიულ-ქრონოლოგიური საკითხები, მიმოძიებული I (ტფილისი 1926), pp. 1-53, now published also in German, *Morgenland*, Heft 18, Leipzig, 1928. An earlier critical study by ი . ჯავახიშვილი, ძველი ქართული საისტორიო მწერლობა² (Tiflis, 1921), pp. 73-91. Other literature in K. Kekelidze, ქართული ლიტერატურის ისტორია I, pp. 569 f., and A. von Harnack, *Mission und Ausbreitung des Christentums*, 1902, pp. 470 f.

¹⁰ The photograph was received by Professor N. Marr with no name on the cover of the package, but it subsequently transpired that it had been sent to him by F. C. Conybeare. The photograph was not perfectly clear as far as the Georgian text is concerned, and the Hebrew text, which belongs to the Jerusalem Talmud, was published by P. K. Kokovtsov, to whom Marr turned it over, in the *Записки Восточнаго Отдѣленія Русскаго Археологическаго Общества*, vol. XI, 1899, pp. 195-205, and p. 413 note. A brief description of it is given in A. Neubauer and A. H. Cowley, *Catalogue of the Hebrew mss in the Bodleian Library*, vol. II, Oxford, 1906, under No. 2672 (col. 74).

¹¹ It is also listed as ms. Georgian 2.

¹² ი . ა . ჯავახიშვილი, ახლად აღმოჩენილი უძველესი ქართული ხელნაწერები და მათი მნიშვნელობა მეცნიერებისათვის (წინასწარი მოცხენება ნიმუშებისა და ხურათების დართვით). *Bulletin de l'Université de Tiflis* II (Tiflis, 1922-23), pp. 313-391, with 15 plates.

¹³ ა . გ . შანიძე, უძველესი ქართული ტექსტების აღმოჩენის გამო; *Bulletin de l'Université de Tiflis* II, pp. 392-424.

perhaps it would be safer to say, it contained forms which differed radically from those met with in most Old Georgian manuscripts, but which were akin to those found in the oldest inscriptions.¹⁴ This discovery led to further investigations. Blake, inspired by a reference in J. O. Wardrop's¹⁵ *Catalogue of Georgian Manuscripts in the British Museum*, examined the Genizah fragments at Cambridge,¹⁶ and found among them three more fragments of the same manuscript as the Oxford leaf; another probable fragment is in the British Museum. Djavakhishvili studied the Tiflis palimpsests, where he brought to light and published about twenty leaves with texts of the new type.¹⁷ His new texts were all biblical in character, from both Testaments, with the exception of a fragment of a book of apocryphal Acts of the Apostles.¹⁸ To these codices and their

¹⁴ Djavakhishvili, აზღად აღმოჩენილი უძველესი ქართული ხელნაწერები, pp. 317 ff.

¹⁵ F. C. Conybeare and J. O. Wardrop, *Catalogue of the Armenian and Georgian mss in the British Museum*, London, 1913, p. 406.

¹⁶ In connection with this our thanks are due to Professor F. C. Burkitt, who gathered together the scattered material before Blake's arrival and aided in identifying the vagrant and elusive passages. The manuscript fragments in question are in the Taylor-Schechter collection in the Cambridge University Library, Nos. 12, 183 and 12, 741; and contain Jeremiah 12, 10-17 and 27, 26-28, 6. They unquestionably belong to the same manuscript as the Bodleian leaf, which, though bought in Jerusalem, came from Cairo.

¹⁷ Exactly how many leaves in this dialect have survived in the Tiflis mss. is not quite clear from Djavakhishvili's somewhat inconsistent statements; see N. A. Hencko in the article cited below, note 51, p. 369. Some recent discoveries of A. G. Shanidze have increased the scope of khanmeti literature considerably. A number of bits from John Chrysostom have come to light (from the readings for Lent), and furthermore the former Sinai ms. No. 9 (Tsagareli, *Свѣдѣнія II*, pp. 57-58), which is now in the University Library of Graz, proves to be a fragment of a khanmeti lectionary. Shanidze has published the Chrysostom fragments under the title ხანმეტო მრავალთავო in *Bulletin de l'Université de Tiflis*, VII (1926), 98-159, and is publishing the other document in facsimile.

¹⁸ The texts published by Djavakhishvili contain the following passages:

(a) Old Testament

- | | |
|-----------------------------|---|
| (1) Gen. 9, 11-14. 17-19 | Hist. Eth. 999, f. 85 ^v -87 ^r |
| (2) Prov. 9, 1-4 | ibid. f. 141 ^r , f. 144 ^v |
| (3) Jer. 27, 26-27; 28, 2-8 | Oxford leaf |

(b) New Testament

- | | |
|--------------------|---|
| (1) Matt. 6, 31-34 | Hist. Eth. 999 |
| 7, 1-15 | 122 ^v -128 ^r , 139 ^v -134 ^r , 127 ^r -135 ^r , 135 ^v -138 ^v , 139 ^r -v |
| 7, 4-16 | Eccl. Mus. 844, f.? |

significance for the biblical text we shall return below. Though the exact date of the fragments is for the moment a matter of acrimonious controversy, they are certainly older than any extant complete Georgian manuscript of the Old or New Testament.

Georgian gospel manuscripts fall into three distinct groups, the second of which may in turn be subdivided into two sections. They are discussed in order of age:

1. The Adysh Gospels,¹⁹ written at Šatberd in Tao-Klard-jet'ia in the year 897, is the second oldest dated Georgian manuscript now extant.²⁰ It differs greatly from all other Georgian manuscripts of the gospels in style and language, and to some extent in readings. For its history readers may be referred to Blake's edition of the text of Mark, published in the *Patrologia Orientalis*, 1928, where the facts are given in detail. There is no doubt that the text of the newly discovered dialectal fragments described above is closely related to this codex.

In the following discussion and tables the Adysh Gospels are referred to either by the symbol 'Ad.' or by 'Georgian¹ (G¹).'

2. The second group comprises a series of manuscripts, belonging for the most part to the tenth century and almost without exception written in capitals.²¹ Of these only two have

(2) Mk. 9, 43-50	ibid., f. 42 ^v

Acta Petri seu Pauli	Eccl. Mus. 737, pp. 330, 339, 322

¹⁹ The literature on this ms. is given by R. P. Blake in 'The Old Georgian Version of the Gospel of Mark,' *Patrologia Orientalis*, t. XX, fasc. 3, Paris, 1928, Introduction, pp. 439 ff.

²⁰ The oldest is the Sinai ms. of the year 864; see below, p. 372, note 64.

²¹ The following partial list makes no pretense to completeness:

(1) The Adysh Gospels (A.D. 897) at Adysh in Svanetia. Phototypic edition by E. Takaišvili (МАК, Выпускъ 14, Moscow, 1916).

(2) The Opiza Gospels (A.D. 913) at Iveron on Mt. Athos. See N. Marr, Изъ поѣздки на Аѳонъ, ЖМНП 322 (March, 1899), pp. 13-15. Used by Benešević in his edition of the text of Matthew and Mark.

(3) The Djruč Gospels (A.D. 936). Now in Tiflis. See M. Brosset, *Bibl. Analytique*, col. 307.

been the subject of thorough study: the Opiza manuscript (913 A.D.) and the Tbet' manuscript (995 A.D.).²² These form the basis of the only critical edition of the Georgian gospels hitherto published, that of Professor V. N. Beneševič.²³ The basic text in his edition is that of the Tbet' manuscript, the variants of the Opiza manuscript being given in the apparatus. The variation between the two manuscripts is usually not very great.²⁴ Both show a reinfection of Greek readings,²⁵ presumably derived from manuscripts of the K-type.²⁶ Of the two, the text of the Tbet' MS. is the more fully revised, although the Opiza MS.²⁷ has itself been again corrected, by a later reader, from the Athonite recension.²⁸ So far as we can judge, the two were revised independently,²⁹ and the two revisions do not seem to bear a close relation to the alterations based on the Greek which we find in the Armenian manuscripts of the same period (below, pp. 304–307). The most striking difference between the two codices is that the Tbet' manuscript contains Mark xvi. 9–20, omitted in the Opiza manuscript and also in the

(4) The Urbnisi Gospels (10th cent.) at Tiflis, *Žordania*, Описание, I, pp. 21–23 (No. 28).

(5) The Cqarost'avi Gospels at Tiflis, *Žordania*, pp. 116–117 (No. 98).

(6) The P'arkhal Gospels (A.D. 970), now at Tiflis; cf. E. Takaishvili, *МАК* 12, pp. 139–151.

(7) The Sinai Gospels No. 15 = 8 Tsagareli (A.D. 978); cf. A. A. Tsagareli, *Свѣдѣнія* II, p. 57.

(8) The Sinai Gospels 16 = 7 Tsagareli (A.D. 992); l. c., p. 56.

(9) The Tbet' Gospels at Leningrad (A.D. 995), used by Beneševič in his edition; cf. Tsagareli, *Свѣдѣнія* I, pp. 17–22.

²² The literature dealing with these MSS. is cited in the introduction to Blake's edition of Mark (cf. note 19), pp. 443 f.

²³ *Quattuor Evangeliorum Versio Georgiana vetus. E duobus codicibus* (aa. p. Ch. n. 913 et 995) edidit Vladimir Beneševič: fasciculus I, *Evangelium secundum Matthaeum*; fasciculus II, *Evangelium secundum Marcum*, Petropoli, 1909, 1911 (title also in Russian and Georgian).

²⁴ This can best be seen by glancing through the apparatus of Beneševič's edition.

²⁵ The influence of the Greek text is observable in the structure and turn of the Georgian phrase rather than in specific Hellenisms.

²⁶ We shall return to this point below (pp. 301–302). This influence appears to have come in by way of the Armenian.

²⁷ See below, p. 302.

²⁸ See N. Marr, *Изъ поѣздки на Афонъ, ЖМНП*, Т. 322 (March 1899), pp. 10 f., and Beneševič's apparatus, *passim*.

²⁹ We have discussed this point below, pp. 304–307.

Adysh Gospels.³⁰ These two manuscripts are, however, not isolated examples or peculiar types. We possess at least one other codex of each type: the so-called Cqarost'avi or K'san Gospels belongs to the Opiza group, while the Urbnisi manuscript falls in line with the Tbet' codex.³¹ Thus we have clear evidence of two recensions, both of which go back to Tao-Klardjet'ian sources. Undoubtedly the other manuscripts of this period belong in large measure to these two groups, although it is possible that other recensions and hybrid manuscripts may still be discovered. Until the individual manuscripts have been examined, all hypotheses as to their character must remain provisional.³²

In the following discussion and tables this recension is called 'Georgian² (G),' and the Opiza codex is referred to as 'A,' the Tbet' codex as 'B.'

3. The third group, to which belong the great majority of the manuscripts, including (with one exception³³) all the minuscule gospels, is the only one to which a reviser's name can be definitely attached. This recension was the work of the Atho-nite school of translators, and one manuscript, the so-called Alaverd Gospels,³⁴ contains the statement that its text is that

³⁰ See Blake's Georgian text of Mark, *Patrologia Orientalis* XX, fasc. 3, pp. 573 f.

³¹ This point was made by the late H. Goussen, 'Die altgeorgische Bibelübersetzung,' in *Oriens Christianus* VI, 1906, pp. 300-318, on the basis of the article of Dimitrii Bakradze, Древние Варианты Грузинского Четверо-Евангелия, Труды V-го археологического Съезда, Tiflis, 1887, pp. 215-220. Goussen (p. 317) prints a photograph of the *desinit* of Mark in Codex A. Brief descriptions of the mss. in question in Th. Žordania, Описание, I, No. 28 (pp. 21-23, the Urbnisi ms.) and No. 98 (pp. 116-117, the Cqarost'avi ms.).

³² The Georgian scholar A. S. Khakhanov had been working before his death on the history of the Georgian gospels, but had only published the theses which he intended to sustain. Takaishvili repeats them in the introduction to his edition of the Adysh Gospels (Предисловіе, p. 1, note 1). Some scattered passages from photographs of Tiflis mss. are given in the article of Conybeare cited above, p. 232, note 3. Much material on the gospels has been collected by M. G. Djanashvili, but has never been published.

³³ The exception is formed by the tenth-century ms. No. 4927 of the Society for the Extension of Literacy among the Georgians. An investigation of the text of this ms. would be highly desirable.

³⁴ A.D. 1054, written on the Black Mountain near Antioch, now ms. 484 of the Ecclesiastical Museum at Tiflis. This is a magnificent codex with gorgeous miniatures and illuminations of the Byzantine type; on it see Th. D. Žordania, Описание II,

of St. Euthymius the Athonite. There is no reason to doubt this,^{34a} but such brief inspection of the text as has been made shows that it is almost identical with that of St. George the Athonite.³⁵ This latter text, probably to be dated between the years 1040 and 1050, became the vulgate of the Georgian church,³⁶ and was followed almost without deviation by the later manuscripts. It is printed in the Bible Society's most recent edition of the Georgian gospels with a fair degree of accuracy, such as cannot be claimed for all the older editions.³⁷ We know that this vulgate text was revised directly from the Greek,³⁸ and the presumption is that the manuscripts used for the revision were of the K-type.³⁹ It is not, however, in any sense a fresh translation, but probably a revision of the text of St. Euthymius, which in its turn was a revised version of the Tao-Klardjet'ian types.⁴⁰ We know of no further revision of the

pp. 46-51. On St. Euthymius and his work, see P. Peeters, *Histoires monastiques géorgiennes*, Bruxelles, 1923, pp. 8 ff.; კ . პეპელოძე, ქ . ლიტ . ისტ . I, Tiflis, 1923, pp. 182 f. and some additional considerations by R. P. Blake, *Journal of Theological Studies*, October, 1924, pp. 54-57.

^{34a} It is not included in the list of his works in the *vita* (Peeters, pp. 34-36).

³⁵ This impression was confirmed by information from M. G. Djanashvili.

³⁶ On George the Athonite, see P. Peeters, *Histoires monastiques géorgiennes*, pp. 69 ff.; კეპელოძე, ქ . ლიტ . ისტ . pp. 212 f.; and R. P. Blake, *Journal of Theological Studies*, 1924, pp. 57-58. The chief point of difference is that the pericope adulterae (Jn. 7, 57-8, 13) appears in this text, but in none of the earlier ones (Khakhnov, cited by E. S. Takaishvili, p. 1, note 1).

³⁷ So Father K. Tsintsadze, who had charge of the printing of the recent editions, informed Blake. That this is true for the Tiflis edition of 1913 in Acts was verified by Blake, who collated the ms. Eccl. Mus. 584 (A.D. 1083), a copy of George's autograph (cf. *Žordania*, l.c., II, pp. 97-99).

³⁸ This is specifically stated in George's *vita* (Peeters, p. 110).

³⁹ This is not a mere guess, but a deduction from the following facts:

(1) The vast majority of the Greek gospel mss. on Mt. Athos are of the K-type, and according to von Soden a sub-species (K^r) seems to have originated there.

(2) The recension of the liturgical books produced by George was based on that of Constantinople (Peeters, p. 95), and Constantinople is the centre of the K-recension.

⁴⁰ A detailed proof of this contention would lead us too far afield. Definite confirmation from the gospel text cannot be adduced, but the apostolic writings afford a cogent parallel. The older text of this section of the New Testament seems to show such uniformity that we can take it to be a definite recension. The three oldest mss. are as follows:

(1) Athos, Iveron No. 11, A.D. 965. Some pages of this are published in facsimile from photographs taken by K. Lake for F. C. Conybeare in the latter's article, 'The

gospels in Georgian by any writer later than George the Atho-nite, though the gospel text was translated in the lemmata of the commentaries of Theophylact of Bulgaria and in other works from the pens of John Čimčimeli and the later scholastics.⁴¹ No continuous revised text, however, was ever issued by them.

Of these three families the third is relatively unimportant for the reconstruction of the Greek text of the gospels, but the first and second, having been corrupted in divergent ways, are both important. By comparing them we can approach more closely to the original version, and thus to the Armenian from which it was made.

The exact date of the original Georgian is, however, an obscure subject to which we have devoted an Excursus.

We have now to discuss the sources of the Georgian version itself. There can be no possible doubt that it was derived directly from an Armenian original. This, however, was not identical with the printed Armenian text nor even with the text of the oldest extant Armenian mss.⁴² Its existence nevertheless is demonstrated by a series of errors or misunderstandings in the Georgian which can only have arisen in Armenian;

Old Georgian Version of Acts,' *Zeitschrift f. d. neutest. Wissenschaft*, XII, 1911, pp. 131-140. He ascribes them to the 13th century, but in fact they are of the year 965 and were written in the monastery of Kranion on Mt. Olympus in Bithynia by the same scribe who wrote the ms. of the Apocalypse (A.D. 978), now Cod. 1346 of the Society of History and Ethnography in Tiflis. Photographs of Cod. 1346 are in the J. P. Morgan Collection at Harvard.

(2) and (3) The other two mss. are in Tiflis in the Library of the Society for the Extension of Literacy among the Georgians, Nos. 407 and 1139 (= Eccl. Mus. 346). Both these have Euthalian apparatus, and both are of the 10th century. The text is very similar in all the three mss.

Now the text of George is evidently based on the earlier version. The alterations consist for the most part in the addition of points omitted in the earlier mss. The language, style, etc., are perfectly similar. George revised carefully on the Greek rather than retranslated, completing and rectifying the work of Euthymius. Similar conditions seemed to have prevailed in the descent of the gospel text.

⁴¹ On these and similar works see გ. კეკელიძე, ქ. ლიტ. ისტ., I, pp. 57 ff., and the fragments of texts published by მ. ჯანაშვილი, ქართული მწერლობა II, pp. v-xxxiv; see Blake in *Journal of Theological Studies*, 1924, pp. 59-60.

⁴² See below, pp. 305 f.

in some cases their Armenian prototypes have survived in our present Armenian, in others they have been eradicated. A large number of passages might be cited,⁴³ but a selection of the most striking points will suffice:

(1) The use in the sense of the French *il y a* of the verb დგომა, დგომა *dgomay, dgmay*, meaning in Georgian 'to stand.' This use arises from the double sense of *կալ kal* in Armenian, which means both 'to stand' and 'to exist.' Cf. Mk. viii. 2, 18, etc.

(2) The use of the Armenian word *շիճ* *šiš*, 'bottle,' 'jar,' in Mk. xiv. 3. This word, homophone with the Georgian *შიში* *šiši*, 'fear,' would probably have been incomprehensible to the later Georgians.⁴⁴

(3) The expression ფერგი დაიპყრა (Mk. x. 49), 'he stopped, halted.' The Georgian literally means 'he seized his foot,' and is sheer nonsense. The printed Armenian, however, gives *դտեղի առ* literally, 'he held his place'; evidently the idiomatic double sense of the verb *առ* 'held,' 'took,' escaped the translator.

(4) Most striking of all, however, is a passage in John ii. 15. The Adysh has the amazing expression⁴⁵ და პილენბი თებლის მოფარდულთა მათ განუბნია 'and the copper of the seed-sellers he scattered.' The Armenian has *ԷԼ զպղինձս հատալժաճառացն ցրուեալս*; that is, the syllable *հատ hat* in *հատալժաճառաց hatavačarac* had become disconnected, was understood as *հատ hat* 'seed,' and was so translated: T. R. καὶ τῶν κολλυβιστῶν ἐξέχεε τὸ κέρμα.

An attentive reading of the Georgian will show a large number of places where the structure of the phrase is evidently derived from that of the Armenian, but these we can pass over here. Likewise no account is taken of the Armenian loan-words found in the Georgian, inasmuch as it has long since

⁴³ See the passages cited in Blake's edition of Mark, *Patrologia Orientalis*, XX, p. 416, note 1.

⁴⁴ The word is used in the Armenian. The Georgian construction is wholly puzzling until the Armenian is compared. The later Georgian mss. read *პლაძახტრი* with the Greek *ἀλάβαστρον*.

⁴⁵ The text of A and B is not yet published; the passage is on plate 159b of the Adysh ms.

been pointed out that these words were in current usage in the Georgian dialect into which the original translations were made. Not infrequently we find in the corresponding places in the Armenian text words different from those which appear in the Georgian. With the exception of special instances, this type of evidence is not pertinent.

The superior antiquity of the form of the version as preserved in the Adysh ms. is deducible from the general method of the translator. This can best be seen by reading the text of the Adysh Gospels, keeping an eye at the same time on the apparatus of the revised codices. Even the Latin rendering reveals the turns of Greek phraseology in the lemmata drawn from the Opiza and Tbet' Gospels and cited in the apparatus criticus. The text of the Adysh ms. follows a different model. Now and again a word is misunderstood or clumsily translated, but the more complex constructions which appear in the revised codices are absent from the Adysh. Simple parataxis, avoidance of participial constructions, and a tense-usage which is native and primitive, are striking tendencies of the translator of the Adysh. Greek loan-words are absent, except for such as are also common both to Syriac and to Armenian. A striking instance in point occurs in Mk. xiv. 20, where the Georgian⁴⁶ has *ჰოფჰბს* *pinaksa*, 'platter,' from the Greek *πίναξ*, while all Greek mss. have the reading *τροβλίον*.

For various reasons (see Excursus II) Meskhian influence may be suspected in this codex. The chief phenomenon, which occurs sporadically in other manuscripts but is here very widespread, is a great uncertainty in the use of the three letters, *ჰ* *v*, *ჟ* *u* and *ჴ* *w*, *ü*. The comparative grammar of the Caucasian languages shows that in Georgian the *v* has developed from various antecedents, and that it is sometimes stable, sometimes unstable. On the whole, Old Georgian orthography in normal manuscripts is relatively consistent in the use of these letters, but the Adysh ms. shows considerable unsteadiness in this regard, which in turn implies an unstable tradition and probably also an unstable dialectal pronunciation. It has

⁴⁶ All three mss.

ჲ for ჳ
 ჳ for ჳ
 ჴ for ჳ

ჲ for ჳ
 ჴ for ჳ

These are not vulgarisms, but evidently represent some local dialect, and there is some reason to believe that this phenomenon was true of the speech of Meskhia.⁴⁷ It is also evident that the scribe had no steady tradition about the use of the letter *ey* η. -ე -e stems are mostly written without *ey* in the nominative, and the letter appears sporadically in places where it is not justified by the rules of Old Georgian grammar. The language on the whole is distinctly archaic. We find a series of 'vulgarisms' (mostly, perhaps, apparent and not actual), such as plurals in -ებო -ebi, წებწებო 'continually' (in Cod. I of the Old Testament), and the like, but along with them a series of rare words, the translation of which is sometimes highly doubtful: შეჴებუნებ 'collapse,' საარებულნი 'going' or 'interfered with,' ატრბანა 'to writhe,' დაწენარებულად 'clearly,' etc.⁴⁸

The variants given in our tables make, we think, reasonably clear the connections between the Adysh ms. and the codices from Opiza and from Tbet.' The amount of verbal difference, of alteration in vocabulary and syntax, is very considerable; the divergences in textual readings are fairly numerous but far less abundant than the verbal differences. Nevertheless the vocabulary and style of all three mss. manifest a fundamental kinship, just as the khanmeti fragments in their turn evince a common ancestry with the Adysh codex. The common ancestor of the entire clan must have had a strongly Caesarean text, but in its descendants a number of Caesarean readings have been revised out by the influence of Ecclesiastical mss. The following tables will illustrate this point:

⁴⁷ It is clear that (1) ჲ *u* in closed syllables, (2) ჳ *ü w* in general, came to be represented as ჳ and ჴ in the Meskhian dialect, as we can see from Šota's work. Certain Tao-Klardjet'ian mss., such as Eccles. Mus. No. 95 (10th cent.), show considerable variation (N. Marr, *Дѣянія трехъ св. близнецовъ мучениковъ Спевсипа, Еласипа Меласипа*, ЗВО xvii (1906), pp. 285-344). In the majority of cases the normal tradition is meticulously maintained; hence I am inclined to think that the scribes came from the adjoining areas.

⁴⁸ Doubts as to the rendering of certain of these were cleared up by Professor N. Marr.

TABLES OF READINGS FROM THE CAESAREAN TEXT IN THE
GEORGIAN VERSION OF MARK I, VI, and XI

In these tables the families described above (pp. 290-292)
are referred to as Georgian¹ (G¹) and Georgian² (G²).

1. *Caesarean Readings found in G¹ and G²* 16

- Mk. i. ✓2 εν τοις προφηταις] εν ησαια τω προφητη
✓8 om μεν post εγω
—10 απο] εκ
caelos apertos
✓11 εν ω] εν σοι
✓12 εκβαλλει αυτον hoc ordine

 31 *om αλλα*
 33 *αποκριθεις ο ιησους λεγει αυτοις* hoc ordine
ταυτα ποιω] *facio hoc*

This list shows that many Caesarean readings are found only in the Adysh ms. — that is, have been revised out of the Georgian² recension. But it can also be shown that the Opiza ms. (A) and the Tbet' ms. (B) contain many non-ecclesiastical readings which are absent from the Adysh. The natural assumption is that A and B have retained Caesarean material which they

found in the archetype but which has been lost in the Adysh. Moreover, a distinction can be observed between the two mss. of Georg². In general they are closely related, more closely than either is to the Adysh. B has certainly not been revised by A, for it contains some Caesarean material not found in A, and sometimes agrees with the Adysh against A. On the other hand B unquestionably shows more Greek influence and contains more Ecclesiastical readings than A.

This is shown by the following tables.

3. Caesarean Readings in G² 7 am

(a) In both Codices A and B, but not in the Adysh ms.

- Mk. i. ✓ 5 παντες post ιεροσολυμιται
 8 om κυψas
 ✓ 10 post πνευμα add του θεου
 13 πειραζομενος] et tentabatur
 ✓ 14 μετα δε] και μετα
 ✓ 17 om γενεσθαι
 18 και] illi autem
 ✓ 20 ευθεως ante αφεντες solum
 ✓ 24 οιδα] οιδαμεν
 31 διηκουει] surrexit et ministrabat
 ✓ 40 οτι εαν] κυριε εαν
 vi. 3 ο τεκτων ο υιος μαριας] ο του τεκτονος υιος και μαριας
 ✓ post αδελφος om δε
 ✓ 6 κυκλω κωμας
 9 αλλα] μητε
 10 εκειθεν εξελθητε hoc ordine
 ✓ 11 om τον υποκατω
 13 εξεβαλλον] εξεβαλον
 14 ηρωδης ο βασιλευς hoc ordine
 ✓ 17 εν τη φυλακη] και εβαλεν εις φυλακην
 22 om και ωμοσεν . . . δωσω σοι
 24 post ειπεν 2^o add αιτησαι
 25 om ευθεως
 27 om ο βασιλευς
 31 post αυτοις add ο ιησους

- vi. 33 αυτους] αυτον
 επεγνωσαν] εγνωσαν
 om αυτον 1°
- 34 πολλης ωρας
 λεγουσιν] ελεγον
- 36 απολυσον αυτους] απολυσον ουν τους οχλους
- 37 φαγειν] ινα φαγωσιν
- 38 εχετε αρτους hoc ordine
- 53 γενεσαρεθ
 ηπτοντο] ηψαντο
- 56 om αυτου 2°

The preceding discussion has shown that the Old Georgian version, represented at present by the Adysh manuscript and by Codices A and B, was one of the best witnesses to the Caesarean text. It has been corrected by Ecclesiastical copies in the Adysh manuscript and somewhat more extensively, but quite independently, in Codices A and B. Further, this Old Georgian was made from the Armenian. But the Armenian from which it was made has been greatly revised in the manuscripts which are the basis of the printed text and in all of the oldest Armenian manuscripts which have been the object of special study. The extent of this revision is shown by the following list of Caesarean readings which are not in the printed Armenian but may be claimed for the original version because they are preserved in one or both of the Georgian recensions.

This list seems to prove the important conclusion that when the Georgian version was made, an Old Armenian version existed which must have been a far better representative of the Caesarean text than is any extant Armenian ms. The only possible alternative to this conclusion would be that the Old Georgian version was made from the Armenian now existing, and then revised, both in the Adysh manuscript and in Codices A and B, by the help of Caesarean Greek manuscripts. But, entirely apart from the fact that this theory would be so improbable as to be almost a *reductio ad absurdum*, it is decisively opposed by the complete absence of any historical or linguistic evidence of direct connection between the Georgian version and any Greek manuscripts. It seems, therefore, certain that the Old Armenian was a relatively pure Caesarean text. Was it a direct translation from the Greek? That is a question of so much importance that it is desirable to state fully what is known of the early history of the Armenian version.

2. *The Armenian Version*

The history of the investigation of the Armenian versions has been set forth in detail by F. Macler in his book, "Le texte arménien de l'évangile d'après Matthieu et Marc."⁵⁷ In a section entitled 'Opinions des Modernes' he summarizes the work of New Testament critics from Richard Simon (1684) to the beginning of the late war. In the main this accumulation of authorities is nothing but a 'summa testimoniorum.' For the most part the scholars there named give no detailed exposition as to why they hold their views, but either content themselves with citing their predecessors or else give a priori reasons for adhering to one or the other of the two current hypotheses.

⁵⁷ Annales du Musée Guimet, XXVIII, Paris, 1919.

These hypotheses are (1) that the Armenian is a faithful representative of the Greek and (2) that on the contrary the Armenian (on the testimony of Moses of Khorene) was a translation from the Syriac.

The data from Armenian sources which we possess about the translation of the Bible into that tongue point to a dual tradition. Grecophil sources, like Lazar of P'arp and Koriun, naturally seek to emphasize the influence of Hellenic models and tradition, while on the other hand Moses of Khorene, who, it may be observed, not infrequently cites versions of documents in forms distinctly older than those now otherwise extant, offers the tradition of Syriac origin. The evidence of the alphabet, as cited below (pp. 360-361), favors a dual source for the script. More value attaches to the discussions subsequent to the discovery of the Old Syriac and especially of the Sinaitic manuscript than to earlier publications. It is not, however, too much to say that until Macler attacked the problem, only one scholar had really examined the Armenian in detail and set forth his results. This was J. Armitage Robinson in his "Euthaliana."⁵⁸ Macler gives a detailed refutation of Robinson's views (pp. xlix-lv), which is at some points convincing, at others not satisfactory.

Macler is a strong partisan of the theory that the Armenian is derived directly from the Greek.⁵⁹ In many respects his work marks a distinct advance over earlier treatments of the problem. He gives us a detailed analysis of the texts of Matthew and Mark, in which he not merely uses the printed editions, but employs for the first time a number of old manuscripts of great merit. In the discussion of the readings the other versions are quoted to explain and illustrate the Armenian rather than to interpret the Syriac or the Greek. He is acquainted both with Syriac and with Armenian to an extent which has not usually been characteristic of New Testament scholars. On the other hand some grave defects of method⁶⁰

⁵⁸ Texts and Studies, III. 3, Cambridge, 1895.

⁵⁹ P. 403: "l'évangile arménien semble calqué sur le grec."

⁶⁰ See Robert P. Blake, 'Macler's Armenian Gospels,' in Harvard Theological Review, vol. XV, 1922, pp. 299-303.

must be noted. He gives no systematic collation of the Armenian materials. He relied too much on von Soden's theories, especially with regard to the position of D among the I-group of mss.⁶¹ And his fundamental hypothesis led him to assume that when a reading of the Armenian is found in any Greek ms., it must have been directly derived by the Armenian from Greek sources, even though it may also appear in Syriac. Even in the case of readings which show affinity to the Syriac, he argues that any direct relation with the Syriac can be denied, first, by reason of the many divergences between the extant Syriac and Armenian texts, and secondly, because of the preponderance of Greek idiom in the Armenian version, so that the readings in question were either derived there also from Greek mss. or else were fortuitous and translational in character. Moreover in many instances, when dealing with the Syriac, he fails to point out that one or the other of the Syriac texts actually preserves the reading which he attributes to Greek influence. But his most serious, though excusable, deficiency is his neglect of the Georgian evidence, so that he has really told only half the story.

Macler makes it plain that the Armenian is related to the group of codices which we regard as Caesarean, but he fails to see that in the extant Armenian this relationship is comparatively weak. The Armenian contains as much K-material as it does Caesarean, and may have suffered revision by the aid of other Greek manuscripts, not of the Caesarean type. We have shown above (pp. 304-307) that the Armenian which underlies the Old Georgian was a strongly Caesarean text without any pronounced peculiarities that betray direct Greek influence.⁶² Therefore the K-elements present in the extant Armenian can only have come in as the result of a secondary recension, in which the Armenian codices were revised from Greek manuscripts containing a strong admixture of K-readings. The variants of this nature found in the text of G² do not

⁶¹ See K. Lake and R. P. Blake, 'The Text of the Gospels and the Koridethi Codex,' *Harvard Theological Review*, XVI, 1923, pp. 267-286.

⁶² See above, p. 255. The Georgian shows that the original Armenian must have been somewhat more literal and less idiomatic than the present texts.

coincide with those found in Macler's Armenian manuscripts, and we are forced to conclude that there is no connection between these two revisions. The presence of the Caesarean stratum in the Armenian, together with the history of the Georgian version, make it practically certain that the ancestor of our present Armenian had the same text (strongly Caesarean) which lies at the basis of the Adysh ms. This being the case, the close kinship with the Greek, which is the distinguishing characteristic of the extant Armenian manuscripts, is not primary in the original Armenian, but a secondary phenomenon in the history of that version.

To sum up, it is certain that the original Armenian was a strongly Caesarean text; this is demonstrated by the Georgian evidence. But this original version is not extant; it was probably revised at an early date, by predominantly Neutral mss. Of this revision no mss. are known to exist, but its existence seems a necessary corollary from the Neutral element in the Adysh ms. of the Georgian (see pp. 254 ff.). It is possible that further investigation will show traces of it in Armenian mss. Later on it was revised again by Greek manuscripts of the K or Ecclesiastical type, and most of Macler's arguments for a Greek original are derived from readings introduced by this revision, not from the readings of the original version. Thus his arguments for the direct dependence of the Armenian on Greek lose their force, and we are justified in accepting the otherwise more probable view that the Armenian is based on the Syriac. The following list of Syriasms preserved in Armenian or Georgian confirms this view, and shows that just as a consideration of the Georgian led to an investigation of the Armenian, so the investigation of the Armenian necessarily leads to a study of the Syriac evidence.

It has seemed best to divide these Syriasms which we have observed into two sections. In the first list we give a series of passages pointed out by A. Merk, in his article 'Die armenischen Evangelien und ihre Vorlage,' in *Biblica*, VII, 1926, pp. 40-71, and add for these the Georgian evidence.

Syriasms surviving in the Armenian noticed by Merk (p. 64)

(The readings first cited in each case are those of the Textus Receptus.)

Mark

Out of ten passages the Georgian supports the Syriasm in eight, has an allied construction in the ninth (i. 23), and in the tenth (i. 44) omits the word because the Georgian შეწირე is absolute in sense.

Other Syriasms found in the Armenian

The group of passages in the Table inserted opposite were detected by ourselves while working over the Palestinian Syriac. We make no claim to having gathered an exhaustive collection, but the instances we have found we consider decisive.

3. The Syriac Versions

The history of the Syriac version of the New Testament falls into two sections according to the dialect used. By far the most important literary dialect of Syriac is that of Edessa and Nisibis, in which the earliest literary monuments in Syriac appear to have been composed. Into that dialect was translated the oldest extant Syriac version, the *Evangelion da-Mepharreshe* or 'separated gospels,' presumably so called to distinguish it from the probably earlier *Diatessaron* of Tatian, which was written in (or translated into) the same dialect but is now extant only in fragmentary and imperfect translations into Armenian, Arabic, and Latin. We know practically nothing about the history of the *Evangelion da-Mepharreshe*. It may have been used, at least in some instances, by Aphraates and the author of the Syriac Acts of Judas Thomas, but throughout the third and fourth centuries the *Diatessaron* seems to have been the dominant version of the gospels among Edessene Christians. At the beginning of the fifth century a new or revised version was made for Rabbula, bishop of Edessa. This revision has been satisfactorily identified by Burkitt with the *Peshitto*, and it became the vulgate of the Syriac-speaking church, both in its Nestorian and Monophysite (or Jacobite) branches. It would be natural that Rabbula should use Greek manuscripts of the type common in Antioch in the fourth century, but whether, as often stated, the text of his gospels is closely related to that of Chrysostom and Theodoret is by no means certain.⁶³

⁶³ Gwilliam, 'The Place of the Peshitto Version in the Apparatus Criticus of the Greek New Testament,' in *Studia Biblica et Ecclesiastica*, V, 1903, pp. 189-237, finds (p. 208) that in Matt. 1-14, of the cases available for comparison, the Peshitto agrees with the "traditional text" 108 times, with *Codex Vaticanus* 65 times, while in 137 cases the Peshitto departs from both, usually with the support of the Curetonian or

According to Burkitt the renderings, as distinct from the underlying Greek text, show that the reviser or revisers who made the Peshitto were familiar with the *Evangelion da-Mepharreshe*. In the sixth century the Jacobite Syrians produced another translation made for Philoxenus, or, as the Syrians call him, *Mar Xenaia*. Of this we have an edition made in the seventh century by Thomas of Heraclea, who added variant readings from manuscripts found by him in the monastery of the Enaton near Alexandria, thus producing the first critical edition of the gospels. (See *Excursus III.*)

A different dialect, which appears to have been spoken by the population of Coele-Syria, is usually called 'Palestinian.' Of the meagre literature in this dialect the best account is given by F. C. Burkitt in his article, 'Christian Palestinian Literature,' in the *Journal of Theological Studies*, vol. II, 1901, pp. 174 ff. The fragments which we possess are almost wholly biblical. The most extensive text is a complete lectionary, found in three mss. of the 11th century, one being now at Rome and two at St. Catherine's on Mt. Sinai. The text of the Roman manuscript (Cod. Syr. Vat. 19) was published at Verona in 1861-1864 as *Evangeliarium Hierosolymitanum* by Count F. Miniscalchi-Erizzo. Some fragments of the gospels in this dialect were also published at Leiden in 1875 by Land in *Analecta Syriaca*, IV, pp. 142, 216 f. The text of the Roman manuscript was republished by Lagarde in an emended form in *Bibliotheca Syriaca*, Göttingen, 1892. The Sinai manuscripts were discovered by Mrs. Gibson and Mrs. Lewis, and published in *A Palestinian Syriac Lectionary*, 1899. Their text is approximately the same as the Roman manuscript, and for those who read Syriac with difficulty the presence of a literal Latin translation in the Italian edition is a great assistance. Among the fragments published by Land is at least one which apparently does not belong to a lectionary, but to a continuous text. In

the Sinaitic Syriac or of the Old Latin, etc. He gives a list of 31 cases where the Peshitto stands alone (pp. 217 f.). In Acts the Peshitto contains "considerable survivals of a more primitive 'Western' Old Syriac in the midst of a text substantially like that of the Old Uncials"; see J. H. Ropes, *The Text of Acts* (*The Beginnings of Christianity*, vol. III), 1926, p. cxlix, and the tables, pp. 291-316.

1906 H. Duensing added a further fragment of Mark in his *Syropalästinische Palimpsestfragmente*, Göttingen, 1906. These fragments apparently came from the Damascus mosque; they have now been lost, or lost sight of. Finally, in 1909, Mrs. Lewis published some fragments, probably of the continuous text, from the palimpsest manuscript of John Climacus at Sinai, in *Horae Semiticae*, VIII, 1909, pp. 68 and 70.

The text of Mark in the lectionary shows some of the variants which occur in all lectionaries in consequence of the use for which they were intended, and, as might be expected in relatively late manuscripts, the lectionary text has been somewhat conformed to the late Ecclesiastical standards. In general, however, our investigations suggest that the Palestinian lectionary preserves, directly or indirectly, the Syriac text from which was made the original Old Armenian, the existence of which we have inferred from the Georgian (above, pp. 294 f.). As the text of the Palestinian Syriac is very imperfectly represented in Tischendorf, we give a collation with the *Textus Receptus* of the lectionary for those parts of Mark i, vi, and xi which are preserved in it, and also of Land's, Duensing's, and the Climacus fragments of these chapters.

Collation of Palestinian Syriac, Mark i, vi, and xi

In this collation 'G' in all cases means 'Georgian.'

The various fragments are denoted by the following symbols:

(1) Lectionary, Mark i. 1-11, i. 35-44, vi. 1-5, vi. 14-30, xi. 22-25, found in the three mss. mentioned above and quoted here, in conformity with Mrs. Lewis, as a, b, c.

(2) *Codex Climaci Rescriptus*, Mark i. 1-10, *Horae Semiticae* VIII, p. 68, quoted as d; and Mark i. 20-29, *Horae Semiticae* VIII, p. 70, quoted as e,

(3) Fragment, Mark vi. 41-50, edited by Duensing, p. 134, quoted as f.

(4) Fragment, Mark xi. 2-3, edited by Land, *Anecdota Syriaca* IV, p. 142, quoted as g.

(5) Fragment, Mark xi, 18-31, edited by Land, *Anecdota Syriaca* IV, pp. 216 f., quoted as h.

These variants seem to prove that the Palestinian Syriac in its present form is a debased representative of the Syriac which underlies the Armenian. Nor can it be doubted that it was based on Caesarean Greek manuscripts. It does not, however, follow that the original Syriac version of this type was made

from the Greek directly into the Palestinian dialect. There is indeed no proof that it was not so made, but the Palestinian form may be a revision of an earlier text in the literary, or Edessene, dialect. In favor of this possibility is the fact that we have no reason to suppose that any extensive Palestinian-Syriac literature ever existed, and that the best Syriac scholars think that the Palestinian dialect was not used for literary purposes until the sixth century, when political and ecclesiastical troubles divided the Syriac-speaking Christians of Coele-Syria from those of Mesopotamia. It is conceivable that the Syriac text of the Theophania of Eusebius, which is extant in the Edessene dialect in a manuscript written in the year 411, and is thus earlier than the Peshitto, may contain traces of the original version. The quotations from Mark in the Syriac Theophania undoubtedly represent the same Caesarean text as is found in the Greek of Eusebius elsewhere; of course they may have been translated directly from the Greek, but they may owe their origin to an earlier Syriac of Caesarean type.

This question has been discussed, but for a different purpose and from a different point of view, by F. C. Burkitt in his *Evangelion da-Mepharreshe*, vol. II, pp. 166 ff. He was anxious to show that there is no evidence earlier than Rabbula for the use of the Peshitto; and it was obviously essential to show that the translation of Eusebius contained in a manuscript dated A.D. 411 did not use it. His conclusion is that the translator probably translated the Greek of Eusebius into Syriac without actually replacing the quotations from scripture by the corresponding passages from a Syriac version, but that he was influenced in his renderings by a knowledge of the *Evangelion da-Mepharreshe*. Plainly the question may now be raised whether the translator was influenced by the *Evangelion da-Mepharreshe* or by the version which we have postulated on Georgian and Armenian evidence. The passages discussed by Burkitt happen not to include quotations from Mark; we therefore append the text of the Syriac Theophania, the *Evangelion da-Mepharreshe*, and the Peshitto for the longest quotation from Mark found in the Theophania.

The difficulty is that in any case the textual character of the quotations in Eusebius and of the 'postulated' Syriac version is the same; both belong to the Caesarean family. Doubtless complete knowledge of the 'postulated' version and of the Caesarean Greek text would reveal some difference between them. We suspect, for instance, that the 'postulated' version was influenced somewhat more by the *Evangelion da-Mepharreshe* than the Caesarean Greek manuscripts were by the text from which the *Evangelion da-Mepharreshe* was made. But this distinction between the 'postulated' version and the Greek manuscripts has not yet been examined; nor can this be done without further study of the Georgian and Armenian, as well as of the Greek text. For the present it will be well to keep an open mind on the question of the relation between the 'postulated' version and the Syriac *Theophania*.

In any case, even if no help can be found in the *Theophania*, the three manuscripts of the Palestinian lectionary are probably somewhat nearer to the Syriac version from which they are derived than is the Armenian of Zohrab's edition to the earliest Armenian version, and it ought to be possible for Orientalists by the use of the Georgian, Armenian, and Syriac to come appreciably nearer to the original form of the version. To reconstruct this Syriac text is a task cognate to, but not identical with, the reconstruction of the Caesarean Greek text which underlies it. The Syriac problem demands a highly specialized linguistic knowledge of Syriac in all its forms which we are far from possessing, and ultimately we should like to ask three questions of those who have it.

(1) How far did this Syriac version which must underlie the extant Palestinian Syriac fragments differ from the Greek text of Caesarea, as that can now be reconstructed? Was it, for instance, in any way influenced either in rendering or in text by the *Evangelion da-Mepharreshe*?

(2) Does this version appear to have been known either to Rabbula or to Thomas of Harkel?

(3) Did the Syriac translator of Eusebius use this version or did he translate Eusebius's quotations without reference to any Syriac version of the gospels?

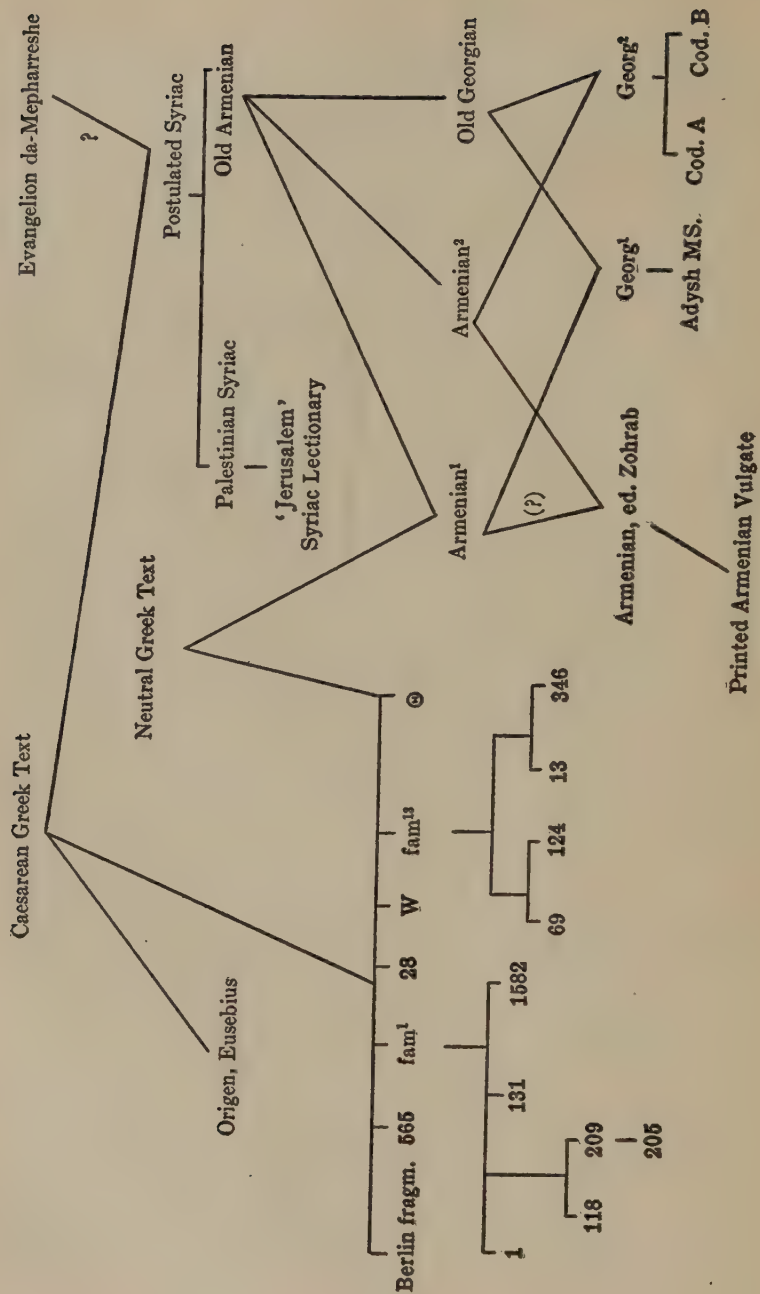

IV. CONCLUSION

The preceding investigations appear to prove three points.

(1) The comparison of the Greek manuscripts studied shows that, though all represent the same underlying text, each has been partly but independently corrected by the influence of the Ecclesiastical text. The tabular presentation given above (pp. 213-246) indicates that no one of these manuscripts is perfect, and that no one of them can be wholly neglected. The patristic evidence, more especially the long quotation in the *Demonstratio Evangelica* of Eusebius, confirms this result. No single manuscript is as good as the quotations in the *Demonstratio*, but the group of manuscripts taken together represent very exactly the text which Eusebius used. Codex Theodoraë (565), which is certainly the best of the group, has been corrected by an Ecclesiastical type of text in perhaps 20 or 30 per cent of variants, but in almost every case one or another codex of the group supports Eusebius, and a reconstruction based on the principle of eliminating Ecclesiastical readings in each manuscript would produce a text substantially true to type. This has been attempted in Excursus IV. There are also a very few readings where either the text of Eusebius has suffered in transmission or else variants in the text represented by the group were already present in the fourth century. Obviously both these possibilities are intrinsically likely and neither excludes the other.

(2) The Patristic evidence discussed in Part II (pp. 259-285) carries the investigation further. It partly confirms and partly modifies the conclusion of Streeter that this text was found by Origen in Caesarea. It was certainly used by him there, and (contrary to Streeter's view) was also used by Eusebius. But was it found by Origen in Caesarea or brought thither by him? On that question we have no firm convictions; the problem, which is stated more fully below, remains to be worked out.

(3) The evidence of the Oriental versions set forth in Part III (pp. 286-323), extends our knowledge of the use made of this Caesarean text. It shows that it was the basis of the Old Armenian version, now best preserved in the Old Georgian

version, which was made from it. We believe that the evidence points clearly to a Syriac rather than a Greek original for the Old Armenian. But this point has been disputed, and the question will have to be examined by experts in the light of the new Georgian evidence. In any case, since the Caesarean text is found in the Palestinian Syriac, we think we may tentatively postulate a Syriac version of it as existing in the fourth century, and may assume that the Palestinian Syriac Lectionary is in some way dependent on this 'postulated' Syriac version. Such a version must have been older than the Peshitto, especially if our suspicion be right that it was known to the translator of the Theophania of Eusebius.

The diagram opposite presents a picture of the results, some of them tentative, reached by our investigation. It must be viewed as subject to the necessary limitations of any such diagram in so complicated a matter. In the diagram extant forms are indicated by Clarendon type. To avoid a bewildering multiplicity of lines the Ecclesiastical Greek has been omitted; it should be understood to have affected, in varying ways, all stages except that of the Neutral text, the Old Syriac, the original Caesarean text, and perhaps of the 'postulated' Syriac, the Old Armenian, and the Old Georgian.

The most important result of these conclusions lies in the problems which they raise, and it seems expedient to consider briefly the course which future study might profitably take. We begin with the more detailed and narrower questions and then proceed to the wider issues.

(1) The evidence of Origen and Eusebius is sufficient to prove that in Caesarea in the third century a text was used which can be reconstructed with a relatively small margin of doubt from our group of manuscripts. The evidence of the Georgian, Armenian, and Palestinian Syriac versions probably shows that a text almost, though not quite, the same as this was current in Syriac in the fourth century. So much seems tolerably certain. The problems begin to increase in number and in difficulty when we come to readings where the authorities differ among themselves. If Origen and Eusebius differ, which is to be regarded as presenting the Caesarean text? If Origen and

Eusebius are on one side and the postulated Syriac text on the other, with the Greek mss. of the family divided between them, what explanation are we to give? What is the relation to the Old Syriac of readings not found in the Greek mss., but assumed for the postulated Syriac version on Georgian and Armenian evidence?

The only answer we can offer is the suggestion that the Caesarean text was never a definite single entity like the Vulgate or the Peshitto, but is analogous to the European Latin, which is not only its contemporary in time but remarkably similar to it in character (though not in detail). Both in the Caesarean text and in the European Latin we find a mixture of readings which seems to leave out the more striking features of the 'Western' text but to preserve many of its minor ones. Nevertheless, the evidence does not indicate that the ecclesiastical circle which used these texts followed clearly defined textual standards.⁶⁴ The mss. of the European Latin can be easily recognized as neither African nor Vulgate; they were used at one period in one place, but they are full of variation. That is exactly the situation revealed by the Caesarean authorities. Excursus IV gives a reconstruction of the text for the three chapters which we have been studying, with an apparatus criticus of all the readings which seem to us to belong to the complex of variants which we call the Caesarean 'text.' This reconstructed text seems to us to show clearly that if time and opportunity permit it will be possible to edit a text of the gospels which can reasonably claim an authority equal to that of a fourth- or even third-century Greek ms. used in Caesarea, just as an edition of a *b i f f*² could claim an authority equal to that of a fourth-century Latin ms. used in Italy. Each claim would be subject to a certain amount of deduction for fortuitous error, but it would be substantially sound.

But before such a reconstruction could be made with perfect accuracy (though it may prove desirable not to wait for perfection), certain preliminary investigations are desirable.

⁶⁴ Did such standards exist for the New Testament before the fifth century? The earliest fixed texts that we know with certainty are the Peshitto and the Vulgate. Did Lucian or Hesychius standardize in the same way that Jerome did?

(a) We greatly need a proper edition of the Old Armenian. In our study of this version use was made among others of photographs of the gospel codex, Jerusalem 2555. The number of Caesarean readings which it contains is striking, and a glance at the evidence published by Macler shows that this is true of other early Armenian codices. Would it be impossible for European and American scholars to coöperate with native Armenian scholars to produce an edition of the Armenian New Testament in which the pertinent evidence of Georgian and Syriac sources should be incorporated in a manner comparable to Wordsworth and White's treatment of the Old Latin (especially of the Acts and epistles) in their edition of the Vulgate?

(b) The Greek mss. with which we have dealt are for the most part well edited and accessible. But there are certain exceptions.

Codex 28 has not been accurately published. We were fortunate enough to have access to an admirable collation of this very difficult ms. by H. C. Hoskier, and this is the basis of our statements as to its readings, but other students have not this advantage and Codex 28 certainly ought to be published. Meanwhile we are immensely indebted to Mr. Hoskier for his kindness.

Again, since the publication of the text of Family 13 and of Family 1 our knowledge of the members of these two families has been increased. Family 1 is now known to include another ms. (1582 = Vatopedi 949), and family 13 includes 543, 788, 826, 828, and 983 as well as the original four (13, 69, 124, and 346) collated by Ferrar. Of these only 543 has been published (in *Scrivener's Adversaria Critica Sacra*). They are included in von Soden's apparatus, but too obscurely and often too inaccurately for convenient use. Codex 1582 adds little to our knowledge of family 1, though it certainly ought to be published, and we hope before long to print a collation of it which has been made by Mrs. Frederick Winslow. It was written, according to a colophon, in 949, a date earlier than can be assigned to any of the previously known members of the family, and although this date may be questioned, the manuscript was certainly written not later than the 11th century. Its text is

closely like that of Codex 1, though perhaps not quite so good; the addition of its readings would not lead to any serious change in the reconstruction of the text of family 1. Ultimately it will also be desirable to consider the relation of family 1 to Codex 22 and other mss. grouped with the latter by von Soden, but a preliminary investigation leads us to expect relatively small results from such a study. The new mss. of family 13 are more important. We hope to publish at least some parts of them before long, chiefly from photographs in our possession. They show that there are two sub-families within the Ferrar group. A collation will probably increase considerably the number of Caesarean readings, and the question of the relation between the two sub-families will prove interesting and difficult.

(c) Perhaps the most important piece of work which remains is the double task of collecting and studying the quotations from the other gospels in Origen and Eusebius. The studies which we have published have been intentionally limited to the text of Mark, and their results cannot safely be applied to the other gospels. Moreover, although we understand that Streeter's researches have led him to the conclusion that the text of the quotations from John in Origen's commentary on that gospel is consistently Neutral, little evidence has as yet been published on the point. A doubt arises when we remember that Streeter was misled in thinking that Origen abandoned the Neutral text when he removed to Caesarea; may it not be that Origen did not use the Neutral text in Alexandria at all? In the quotations from Mark the evidence shows (1) that he used the Neutral text after his arrival in Caesarea, (2) that the copy which he used was a mixed type (Neutral up to the middle of Mark xii and thereafter of the type of family Θ), and (3) that in later writings he used only the text of family Θ . For Mark there is not sufficient evidence to prove conclusively what text Origen used in Alexandria. We must return to this point later, but plainly the important question whether he used the Neutral text at all in Alexandria, can perhaps be answered by investigating the quotations from all the gospels in books i-v of the Commentary on John. Unfortunately we did not see this point until too late to deal with

it in this article, but we hope to report on it before long. The matter is complicated by the facts that there are very few quotations from Matthew and Luke in these books, that there are noticeably fewer variants in John than in Mark, and that some of the family- Θ manuscripts of great value in Mark may desert their allegiance in the other gospels.

Scarcely less important than the quotations of Origen are those of Eusebius, for which the manuscript tradition, though not perfect, is far better. These must be collected, gospel by gospel, and compared with the reconstructed text of family Θ . We hope to do this in the course of time, but it is not a small piece of work.

By such methods as these, and with these preliminaries completed in full or in part, it would be entirely possible to reconstruct a fair picture of the text in use in Caesarea in the fourth century, or even in the third, and of the amount of variation in it.

What light would this throw on the history of the gospel text in general?

The first problem which for many years is likely to engage at least the intermittent attention of all students of the New Testament is the origin of the Neutral text. The little more which can be said about it today as compared with fifty years ago intensifies rather than relieves the problem. Let us state the facts as we see them.

In the fourth century the Neutral text was used by Athanasius. This statement we take on trust from von Soden and others, who have examined the question; we do not ourselves know from actual study whether it is true, still less whether it is possible to determine the type of Athanasius' text as that found in B or in \aleph or in $L\Delta$; the statement is commonly made that the Athanasian text is in the main that of B. It is certain that these questions cannot be settled without considering the places in which Athanasius wrote. He was indeed bishop of Alexandria, but something like half his episcopate was spent in exile. Was he using the same type of manuscript throughout? The situation discovered in the case of Origen's

quotations may well be found repeated with Athanasius. We will assume, however, for the moment that the quotations of Athanasius, when studied in detail, will confirm the accepted view that he always used a Neutral text of the B-type, and that he did so because it was the text used in Alexandria.

Almost at the same time that Athanasius was writing, \aleph and B were being made. A good case can be made for the Alexandrian origin of B. As to \aleph claims are made both for Alexandria and for Caesarea, and we shall probably never know with complete certainty. The case for Alexandria is stated in Lake's introduction to the photographic facsimile of the Codex Sinaiticus. Some fresh arguments for Caesarea have been recently urged by Lagrange in the *Revue Biblique* (January, 1926, p. 91). It should be noted in this connection that one point which seems not to have been brought out before is that the corrections made in the gospels by \aleph^c (who probably worked in Caesarea) appear to have no connection whatever with the Caesarean text, but to have considerable affinities with the text of L. We have some statistics bearing on this subject which we hope to publish before long. Another line of evidence, which can hardly be brought into doubt, for the Egyptian use of the Neutral text of the other gospels in the fourth century is to be found in the papyrus fragments, but unfortunately it does not apply to Mark, of which no early papyri have been discovered.

Thus, though there is no doubt that the Neutral text was in existence in the fourth century, and was used in Egypt, the evidence is less extensive than is often supposed. And if we go back seventy years, from Athanasius to Origen, although we still find the same text, yet so far as the gospel of Mark is concerned there is no evidence that clearly connects it with Alexandria, and it may belong to Caesarea.

This unexpected conclusion is the result of the investigation on pp. 261 ff. That shows that nothing enables us to identify certainly the type of text of the gospel of Mark used in Alexandria by Origen. There is only one really significant quotation (from Mark i. 1 f.), and in this the Neutral text and the Caesarean are almost the same. There are however two variants,

both pointing to the Caesarean rather than the Neutral text, though not decisively, and it is interesting to notice that the Codex Sinaiticus is once more a factor in our hesitation.

The first is the omission by Origen of *υιου του Θεου* in Mark i. 1. This is undoubtedly a Caesarean reading, for it is supported by Θ 28, the Georgian, Armenian, and Palestinian Syriac. Since it is also found in Irenaeus, it may be the 'Western,' and even the 'true,' text, but was it the Neutral reading? The only evidence that it was is the support given to it by **Σ**. Thus in order to prove that Origen while in Alexandria used the Neutral text of Mark, it is necessary to maintain that in this passage **Σ** alone among the ancient codices has preserved the Neutral text. It seems to us more probable that there is a Western or a Caesarean element in **Σ**.

The second variant is less striking. In vs. 2 all the early authorities, including both Caesarean and Neutral, read 'in Isaiah the prophet,' instead of 'in the prophets' of the later texts, but the Caesarean text has *Ἡσαία*, and the Neutral text *τῷ Ἡσαίᾳ*. Origen's quotation omits the article and is in so far definitely Caesarean. Of course no one would build a large theory on the omission of an article, but it is a significant fact that at the only two points where the Caesarean and Neutral texts vary in this quotation from Mark i. 1 f. Origen stands on the Caesarean side.

Thus, so far as the evidence goes, and it obviously does not go far enough to give certainty, it would seem that for his text of Mark Origen during his early days in Alexandria used a codex akin to family Θ, then deserted it in favor of a copy of Mark with a Neutral text (at least in the first twelve chapters) which he found in Caesarea, and finally, some years later, reverted to the Θ-text which he had formerly used in Alexandria.

But if this is so, we are as far as ever from knowing the origin or history of the Neutral text of Mark. We can assume with fair probability that when Origen left Alexandria — in some perturbation and rather hurriedly — he did not take with him any manuscript of Mark. He would consequently use at first those which he found in Caesarea. Later on he was able to obtain copies of the text which he had formerly used. But we

ern' text. So far as we can see, the text used by Clement of Alexandria was of the same nature, and those who claim knowledge of the text used by Tatian generally put it into the same class. What more do we really know of the text of the second century? It is often stated that the Old Syriac and Old Latin belong to that century. It is quite possible that they do. But proof has never been given. Who can say with complete certainty whether Tertullian used a Latin version or himself translated the Greek, and who can prove that the Old Syriac existed before the year 200? If, however, the hypothesis be accepted that both Old Latin and Old Syriac belong to the second century, we have merely greatly increased the evidence for the existence of two local texts, one belonging to Africa and the other to Mesopotamia, which are classed together as 'Western' in the sense that they are not Neutral, but for no other good reason. They differ very markedly from each other, though they also frequently agree against all the later types.

Turning to the third century proper, we find that certainly in Carthage and probably in Edessa, locally the two extremes of Christianity, the second-century 'Western' text was still preserved. It was used by Cyprian in Carthage and, a little later, by Aphraates in Mesopotamia, though in his case the question is complicated by his use of the Diatessaron. And in Africa the same text was used for at least another century and a half. Augustine still used the African text, substantially unchanged since the time of Cyprian, until he was converted to the use of the Vulgate. Ephrem Syrus never used anything but the Diatessaron in the gospels and a strongly 'Western' text of Acts of which no manuscript has survived.

Leaving these two extremes and turning to the central districts, we find that at the end of the third century and the beginning of the fourth three texts were dominant. In Italy the European Latin was supreme; in Caesarea the Caesarean text was in use, and there is no further trace of the Neutral text there, although it had earlier been used in Caesarea by Origen; in Alexandria the Neutral text had become dominant. These three texts — European Latin, Caesarean, and Neutral — seem to hold an interior position both in time and place. They

stand half-way in point of time between the 'Western' text of the second century and the Ecclesiastical text of the fifth, and they occupy a geographical position in the centre of Christianity between Carthage and Edessa. The problem is whether they are revisions or 'primitive' texts. Unfortunately we do not know what were the central texts in the second century. Did Italy and Palestine use at that time the same type of text as they did in the third century, or had they then the same type as the exterior districts, and did they revise it so as to produce the Caesarean text and the European Latin? The European Latin is thought by many of the best Latin scholars to be a revision of the African, but textually it not infrequently agrees with the Neutral and Caesarean against the African; or, to put the matter in another way, when there is a difference of reading between Carthage and Edessa the Italian, Alexandrian, and Palestinian texts agree sometimes with one, sometimes with the other, and we suspect, though we do not at present know the facts, that the text of Rome will prove more often to agree with Carthage and the text of Caesarea more often with Edessa. Does this mean survival or revision? If it be revision, by what standard was the revision made?

If Burkitt be right in holding that the *Evangelion da-Mepharreshe* represents the Greek text used in Antioch in the second century, and C. H. Turner right in holding that the African Latin version was made in Rome, the 'geographically extreme' character of the evidence for the text of the second century is unimportant. There is much to be said for both of these views, especially for Burkitt's; if they are accepted, the case for regarding the third-century texts as revisions is certainly strengthened. But at present it is safer not to treat either of the two theories as established.

The general picture which is presented is that of a widespread tendency toward a more uniform text, a movement which culminated in the fourth and fifth centuries in the production of the Antiochian and Ecclesiastical texts. The view of Westcott and Hort, that the Neutral text was always in existence, would probably lead to the conclusion that knowledge of it brought about this tendency to assimilation. A plausible

suggestion is that of J. H. Ropes, that the Neutral text represents the text of the gospels before the four-fold canon was adopted, and the 'Western' text a reworking of it for the purposes of the four-fold canon. It may be so, or it may be the other way. The African Latin and the Old Syriac may have been the 'pre-canonical' text. In any case Ropes would agree with us that the only way in which this can be proved is by the consideration of internal probability of readings, in that limited number of cases which lend themselves to this method of inquiry. Which is, in itself, the better text — that is, the one more likely to have been written first — the 'Western' text or the Neutral? The introduction of this question makes the situation today curiously like that which existed in the time of Westcott and Hort. In those days Burgon maintained vehemently that the text of the minuscules represented an old text which had been forgotten at the time of the making of \aleph and B but was later recovered by the church. The answer made to him was that the Neutral text was proved to be the 'true' text by the objective evidence of MSS., versions, and fathers which supported it against the Textus Receptus. Against the minuscules of the Middle Ages Hort successfully advanced the superior antiquity of \aleph B Origen and Athanasius. Now the position of the text is reversed. The evidence of Origen has proved ambiguous, and the most that can be said is that the Neutral text is one of the Greek texts, but not the only one, current in the third century. The evidence of the second century, fragmentary though it be, supports (as Westcott and Hort frankly admitted) the claims of a text which neither Burgon nor Hort advocated, though Rendel Harris inclined to it — the 'Western' text. The 'Western' evidence is earlier than the Neutral, though that does not necessarily prove that the 'Western' text is the earlier. If, however, we are after all to believe that the text of the later witnesses is better than that of the earlier ones it can only be by reversing the method of Hort, who was followed by Sanday, and by insisting on subjective rather than objective criticism. This we believe is right. Ultimately all intelligent criticism is subjective.

Meanwhile something remains for objective methods. It may be that Westcott and Hort did not reconstruct, as they believed themselves to have done, the 'original text' of the Greek Testament; but they at least printed a text which with very slight change and the addition of a simple apparatus would give us one of the great 'central' texts of the third century. Wordsworth and White's Vulgate includes (especially in Acts and epistles) an adequate presentation of the European Latin; we hope that the present article has shown how the same could be done for another 'central' text — the Caesarean. Finally, it would not be impossible, though it would be somewhat more difficult, to give in a usable form all the available evidence for the text of the second century. Until these things are done the stage is not really set for intelligent discussion of the ultimate questions which criticism will have to face.

EXCURSUS I

THE ECCLESIASTICAL TEXT

Kirsopp Lake

It is well known that as compared with the early recensions the vast majority of manuscripts contain a different text. But within the limits of this text, which von Soden called K (*Koinḗ*), there is considerable variation. Although in itself relatively unimportant, this variation complicates the investigation of mixed texts such as are found in the group of manuscripts which witness to the Caesarean text.

The situation is this. Speaking generally, all the Caesarean witnesses have been corrupted by the influence of the late Greek text. The true Caesarean text can be reached by comparing the various manuscripts, and accepting as the family reading that which is not found in the late text. For this purpose it is generally sufficient to take the printed *Textus Receptus* as the late Greek text. Indeed, to do so is the only practicable course. But difficulty arises in two directions.

1. In a considerable number of readings the *Textus Receptus* differs from the majority of late mss. In these cases the mechanical application of the rule of taking the reading which is not in the *Textus Receptus* yields a result exactly the opposite to the one desired.

2. Cases of triple or multiple variation. The cause here may be genuine variation within the Caesarean group. Each early type, Neutral, Western, or Caesarean, has variants within its own limits, and the editor of any one recension would be obliged to print a considerable apparatus criticus of readings which can lay legitimate claim to be considered true variants within the type, rather than corruptions introduced from outside. On the other hand, the triple or multiple variation may be due to the fact that the several Caesarean manuscripts were corrupted by various late texts different from one another.

For these reasons it is desirable to know the history of the late text. How far does it differ from the *Textus Receptus*?

How far does it contain variants? How far can these variants be regarded as forming separate recensions or groups?

To answer these questions only two practicable lines of approach offer themselves—the study of von Soden and the study of a mass of late manuscripts.

Von Soden, in the second Abteilung of the first Part of his work, pp. 712–892, gives an elaborate analysis of the K-text. This must be supplemented by his discussion of those I-texts which have been largely corrected to a K-standard and of which he treats on pp. 1109–1275.

His results are these. There was originally a pure K-text, of which the uncials Ω and V are typical examples. This he calls K^1 . It was later twice revised, and these revisions he calls K^x and K^* . There are also many manuscripts which represent the attempts of scribes to correct the I-text to a K-standard. Of these the types $BO\Phi\Sigma\Pi$ and K^a are the ones most thoroughly corrected, and K^a was specially popular.

Unfortunately von Soden's statement of the facts is so obscure that the student is continually at a loss to know what he is to regard as the reading of any given group, nor does von Soden's apparatus criticus make matters much better.

Despairing of ever being able to obtain clear results from von Soden's pages, and questioning the validity of some of his conclusions, we determined to take one chapter — Mark xi — and collate it in as many manuscripts as possible. It was obviously impracticable within the limits of reasonable time to collate all the gospels or even the whole of one, but we believed that a single chapter would show how much variation can be expected, and how far it is possible to detect groups.

We collated this chapter with the Textus Receptus (Lloyd's edition, Oxford, 1894) in all the manuscripts (excluding lectionaries and commentaries) on Mt. Sinai, at Patmos, and in the Patriarchal Library and the collection of St. Saba at Jerusalem.

We omitted from consideration Codex 1241, which we hope to publish fully before long, as it has a remarkable text, for which von Soden's classification is inaccurate. We did not include 1192 and 1210, which von Soden classed with his H^r -group (that is, fam^1), because, though not specially related to family 1, they

seem to us to have weak Caesarean texts; but we have included 1188, classed by von Soden in his Φ -group, for in this chapter it is in fact not substantially different from the K-codices.

It is desirable to emphasize that the collation is only relatively accurate. No collation can be fully trusted unless it has been checked at least twice; and in the nature of the case our collations could not be checked. In von Soden's collations one detail of the method employed (which we have been able to avoid) increased, as it were mechanically, the gravity of the collators' errors. Von Soden's collations appear to have been made with a modern critical text — certainly they are printed as an apparatus to his own critical text. The standard with which the collations were made thus contained all the 'good' readings, and consequently in collating a late ms. every failure to observe a variant resulted in introducing the erroneous indication that the ms. positively contained an early reading of a type contrary to the general type of the ms. If the collation had been made with the Textus Receptus, such slips would merely have caused individual (and often fortuitous) variants to be omitted from the apparatus. Under von Soden's method the result of error in collation is to make a late ms. appear more like the modern critical text than it really is; under the opposite method the result is merely to make the ms. appear closer to the Textus Receptus than it really is.

We print our collation in full (pp. 349–357) because we were surprised by two things — first, by the large number of variants, and secondly, by the absence of close relationship between the mss. — and because we think that many students will be glad to see the result of a full collation of a considerable body of late mss.

Using our collations, we came to the conclusion that in Mark xi the most popular text in mss. of the tenth to the fourteenth century (hereinafter referred to as the 'Ecclesiastical' text) differed from the Textus Receptus in the following variants:

1188	π	<i>Rome</i>	xi. 1	$\beta\eta\theta\phi\alpha\gamma\eta]$ $\beta\eta\theta\sigma\phi\alpha\gamma\eta$	T	<i>fam' fam 13</i>
	π	<i>S</i>	32	$\alpha\pi\sigma\tau\epsilon\lambda\epsilon\iota]$ $\alpha\pi\sigma\tau\epsilon\lambda\lambda\epsilon\iota$	K	<i>fam</i>
	π	<i>S</i>	18	$\alpha\pi\omicron\lambda\epsilon\sigma\omicron\upsilon\sigma\iota]$ $\alpha\pi\omicron\lambda\epsilon\sigma\omega\sigma\iota$	<i>fam</i>	
	π	<i>S</i>	32	$\alpha\lambda\lambda\ \epsilon\alpha\nu]$ $\omicron\mu\ \epsilon\alpha\nu$	T	<i>4ABCK fam 1</i>

In the group given below the evidence is such that we may fairly say that this later, or Ecclesiastical, text was not homogeneous. Some of this variation is probably due to admixture, especially with K^a, but part of it is merely accidental. The readings in the following list may fairly be regarded as variants within the late text. Those marked with an asterisk are also found in K^a and are quite common in the Ecclesiastical text. For the discussion of K^a see pp. 342-346.

- xi. ✓2 ουδεις] *ουπω ουδεις
 ✓4 τον πωλον] *om τον S
 5 εστηκοτων] εστωτων T
 6 ενετειλατο] ενετειλατο αυτοις.
 ✓8 εις την οδον bis] *εν τη οδω bis S¹ Rmc
 ✓18 οι γραμματεις και οι αρχιερεις] *οι αρχι- Rmc
 ερεις και οι γραμματεις
 21 εξηρανται] εξηραται S
 ✓22 ιησους] *ο ιησους TS Rmc π
 29 καγω] και εγω TS
 ✓31 ελογιζοντο] *διελογιζοντο Rmc

Other judgments might reduce or enlarge this list, but probably not very much. It should be noted that it represents somewhat less variation 'within the family' than would be found in a similar treatment of the Neutral or Caesarean texts.

Speaking generally, the evidence in our collations for the grouping of the codices which contain this text is singularly negative. There is extraordinarily little evidence of close family relationship between mss. even in the same library. They have essentially the same text with a large amount of sporadic variation.

It seems to us that this text is clearly that of the Byzantine church, certainly after the ninth century, and possibly some centuries earlier. In all probability it is the same as von Soden's K^x.

We cannot at present distinguish anything which can be identified with von Soden's K^r, nor do we feel any confidence in his K¹-text as a really distinct text. Taking Ω and V, to

which access is easy, as representing the K^1 -text, we find that in this chapter it varies from the Textus Receptus only in the following places:

- xi. 3 αποστελει] *αποστελλει
 4 τον πωλον] om τον
 18 απολεσουσι] *απολεσωσι
 22 ιησους] ο ιησους Τ
 32 αλλ εαν] *om εαν Τ

The readings marked with an asterisk are those of the Ecclesiastical text; the omission of τον in vs. 4 is a K^a -reading which is often found in late mss.; and ο ιησους for ιησους in vs. 22 is also common, though not in K^a , which omits ιησους altogether. On the other hand Ω and V both read βηθφαγη, not βηθσφαγη, and this is characteristic of the K^a -text but rare in mss. of the more common Ecclesiastical text. Our collations show that out of the 119 mss. which we collated 20 agree in omitting τον in vs. 4 and reading ο ιησους in vs. 22, but only one (1324) reads βηθφαγη. It is possible that further research would confirm von Soden's distinction between K^1 and the later text, but at present we do not feel convinced.

More important is the case of von Soden's K^a -family. The K^a -text is undoubtedly akin to the K -family, but is clearly distinguishable from the common Ecclesiastical text.

It is described by von Soden in I, II, pp. 850-893, 1160-1170, and 1460-1468. In the first of these places he discusses the evidence for the K^a -text; in the second, its nature and relation to other texts; in the third he deals with it incidentally in connection with the quotations of Chrysostom, the Cappadocian fathers, and Theodoret. There are also some important references to it in the section dealing with the 'Antioch' commentary (pp. 805-844).

His general position is that K^a represents a revision of an I-text by K^1 . The reviser chose always the variant which had a parallel in the gospels. In details of spelling and the like he followed K^1 . This appears to us to mean merely that the mss. are late; in manuscripts, as in printed texts, orthography is a matter of fashion.

The evidence for K^a is divided by von Soden into two groups, of which the second may be disregarded for the present.

The best representatives are:

von Soden		Gregory	von Soden		Gregory
*71	=	K	1018	=	114
*73	=	II	*1045	=	1079
*79	=	1500	*1056	=	1816
*1089	=	1346	δ358	=	1398
1095	=	652	1330	=	1008

285	=	265✓	*210	=	178
δ161	=	796	1166	=	1781
*110	=	72	249	=	116✓
{ *1121	=	1219 }	*285	=	265✓
{ *δ459	=	489 }✓	1236	=	1154
4001	=	904	334	=	537
{ *1144	=	1478	4015	=	1699
{ 461	=	775	1265	=	1009

He also classed the Codex Alexandrinus (A) with this group.

Those marked with an asterisk are the best, in von Soden's opinion. It is, however, extremely hard to discover from von Soden's apparatus exactly what he regards as K^a-readings. Fortunately A is easily accessible,⁶⁵ and KΠ are quoted fully by both Tregelles and Tischendorf. Using the consensus of two out of three MSS. we can get a rough idea of the K^a-text and judge its degree of variation from the Ecclesiastical text and from the Textus Receptus. A collation with the Textus Receptus yields the following variants; the three marked with an asterisk are also Ecclesiastical, that is, are cases in which the Textus Receptus happens to have preserved unusual readings.

xi. § βηθφαγη] sic 1219. 1312.
 — 2 ουδεις] ουπω ουδεις — 4.
 3 αποστελει] *αποστελλει ✓ ✓ —

⁶⁵ We are, however, far from convinced that Codex Alexandrinus really belongs to this group.

- 4 τον πωλον] om τον ✓ 4. " "

- 32 αλλ εαν] *om εαν T ✓ 1220.1313. ✓
- 33 ο ιησους αποκριθεις] αποκριθεις ο ιησους

Using this list as a guide, the following mss. can be clearly identified from our collations as presenting a relatively pure K^a-text. The numbers used, here and elsewhere in this Excursus, are those of Gregory's list.

These are given in the order of their apparent merit, and the first four certainly would be important in any attempt to edit the K^a-text.

Besides these the following represent a mixture of K^a and the Ecclesiastical text:

1166 1196 1198 1201 1203 1204 1208 1215 1216 1217 1224 1233 1319 1338 1386 1389.

The most important observation made by von Soden is that the K^a-text was used by Theodoret, and in Luke and John by Chrysostom. He thinks that in Matthew and Mark Chrysos-

tom preferred a K¹-text, though he is inclined to ascribe to him the creation of the K^a-text.

If it be true that K^a is the text of Theodoret, there is a presumption that it, as distinct from the Ecclesiastical, is the Antiochian text of the fifth century. Rahlfs holds ("Der Text des Septuaginta-Psalters," p. 171) that in the LXX Theodoret used a pure Lucianic text, and without assuming too positively the existence of a Lucianic text in the New Testament, there is some attractiveness in the supposition that K^a is the Lucianic recension and was used as the chief basis of the Ecclesiastical text, thus reversing von Soden's theory.⁶⁶

It appears clear that it would not be impossible, on the basis of collations which could be obtained with relative ease, to reconstruct the K^a-text and the Ecclesiastical text. If this could be done, it would afford a far firmer basis for collations than

⁶⁶ It has sometimes been overlooked that the late standardized texts in Greek, Latin, Syriac, and Coptic represent revisions of the 'central' texts of the third or fourth century, not of those found in the outlying districts. The Vulgate is a revision of the European Latin; the Peshitto is probably based on a text drawn from Antioch, though in our ignorance of that text its exact relation to it is by no means clear; the Bohairic represents the text of Alexandria; the later Greek texts were apparently formed as the result of a compromise between Antioch and Alexandria. It is this last point which calls for more investigation. We have endeavored to show that there is reason to distrust von Soden's analysis of the later texts. If it be thought worth while, to borrow a classic phrase, to 'do so much to learn so little,' it will probably be possible to make generalizations from the small differences which divide the mass of late mss. into divergent groups. It seems to us that the text which von Soden calls K^a is probably the oldest form of the late text. As Streeter has suggested, it may very well be the Lucianic text and it would not be at all difficult to reconstruct it with tolerable certainty. But we do not know whether the presence of a considerable number of K^a-readings in the Caesarean text means that the Caesarean mss. have been corrected by the K^a-text, or that the K^a-text was partly based on the Caesarean. The point is not one of capital importance, but it affects our judgment concerning a certain number of readings in Caesarean mss. Speaking generally, it seems to us extremely likely that the Caesarean text was really one of the ingredients which entered into the making of the later texts, and to those who think as we do — that the mental attitude of an age is apt to be reflected in its texts, we would commend a study of the difference between the general character of the Caesarean and Neutral texts on the one hand and the K^a and Ecclesiastical texts on the other. The third and fourth centuries used the Neutral and Caesarean texts; both are marked by clearness of choice and decision between alternatives. It is not an accident that these centuries were those which formulated the great doctrines of Catholic Christianity, and that the fifth century, which used the Antiochian and Ecclesiastical texts, was in the East chiefly characterized by compromise in doctrine and by conflation in text.

the Textus Receptus, and would often help to elucidate questions of mixture in the corrupt mss. of early texts.

One other group appears clearly in our collations; it is quite plain, but we have failed to identify it with any of von Soden's groups. It consists of four mss.: 1169, 1173, 1204, and 1385, and the collation of it with the Textus Receptus is as follows:

- xi. 1 ιερουσαλημ] ιεροσολυμα 1169 1173 1385 *61.*
 ✓ βηθφαγη] βηθσφαγη 1169 1173 1204 1385 *S Pm 61.*
 3 αυτον αποστειλ. ωδε] αποστειλ. αυτον ωδε 1169 1173 1204
 1385 *Rmc*
 ✓ αποστειλει] αποστειλλει 1169 1173 1204 1385 *S Rmc*
 4 om τον before πωλον 1173 1204 1385 *S 61.*
 6 καθως] καθα 1169 1385
 7 επ' αυτω] επ αυτον 1169 1173 1204 1385
 8 εις την οδον 1^ο] εν τη οδω 1169 1173 1204 1385 *S Rmc*
 17 ⁹ επιδασκεν λεγων αυτοις] επιδασκεν αυτους λεγων 1204 1385
 (1169 1173)
 21 ¹⁸ εξηρανται] εξηραται 1169 1204 1385 *S*
 22 ιησους] ο ιησους 1169 1173 1204 1385 *S Rmc*
 26 αφησει] αφησει υμιν 1173 1385
 om τα παραπτωματα υμων 1169 1173 1385
 27 om παλιν 1169 1173 1204 1385
 31 προς εαυτους] εν εαυτοις 1169 1173 1204 1385
 ✓ ελογιζοντο] διελογιζοντο 1169 1173 1204 1385 *Rmc 61.*
 32 εφοβουντο] φοβουμεθα 1169 1173 1385
 απαντες] παντες 1169 1173

Moreover it is noteworthy that this group agrees with the Textus Receptus in the following passages in which the Textus Receptus has readings not found in most mss. of the Ecclesiastical text:

- xi. 18 απολεσουσι, not απολεσωσι
 29 υμας καγω, not καγω υμας *S*
 32 αλλ εαν, not αλλ without εαν

The case is a little different with regard to the text which von Soden regards as typical of the group of mss. which contain the Antiochian commentary (his A^c-group). He ascribes

to this recension the following variants in Mark xi (see von Soden, I, II, p. 825). We give from our collations the codices supporting each variant.

- xi. 1 βηθφαγη] βηθσφαγη c. paene omn
 4 εξω] ante προς την θυραν c. 1197 1227 1163
 6 ενετειλατο] add αυτοις c. 1186 1216 1230 1232 1240
 1242 1243 1164* 1167 1169 1181 1317 1320
 8 ιματια] χιτωνας c. 1190 1197 1211 1227 1163 1176
 1388 1321
 εις την οδον bis] εν τη οδω bis c. 1196 1197 1200 1201
 1204 1214 1217 1219 1220 1223 1226 1230 1233 1169
 1171 1173 1385 1313 1318 1319
 13 συκην] add μιαν c. 1200 1219 1220 1225 1233 1313 1319
 21 εξηρανται] εξηραται c. 1190 1195 1196 1197 1204 1208
 1211 1214 1215 1217 1227 2293 2294 1169 1176
 1181 1385 1966 1315 1321
 23 πιστευση] πιστευσει c. 1201 1202 1163 1164 1171 1181
 1966 1314 1317 1318 1320

Of these variants βηθσφαγη is undoubtedly the typical Ecclesiastical reading and proves nothing. But though there is here clear proof of the existence of the variants which von Soden regards as typical of the A^c-text of the Antiochian commentary, they are not found in any special group of our codices. Apart from the reading βηθσφαγη there are seven variants: of these four are supported by 1197 and three by 1227, but no other codex supports more than two.

Therefore, whether this special combination of variants really represents a recension must be settled by an investigation of all the mss. of the Antiochian commentary. So far as our mss. go, they merely show sporadic variation, and no group of this type can be distinguished.

These results are both instructive and disconcerting. They are disconcerting because they substantiate fully only two of von Soden's subdivisions of the K-text. Of course the others may prove to be realities, but one would have supposed that the difference between K¹, K^x, and K^r would have been plain

in a collation of over a hundred mss. for any chapter. It is impossible to repress a doubt whether von Soden's analysis of the K-text is not as incorrect as his classification of the I-codices.

The results are instructive, especially in their negative aspects. This collation covers three of the great ancient collections of mss.; and these are not modern conglomerations, brought together from all directions. Many of the mss. now at Sinai, Patmos, and Jerusalem must be codices written in the scriptoria of these monasteries. We expected to find that a collation covering all the mss. in each library would show many cases of direct copying. But there are practically no such cases. What does this mean?

Before answering the question, it may be well to put another. Why are there only a few fragments (even in the two oldest of the monastic collections, Sinai and St. Saba) which come from a date earlier than the 10th century?

There must have been in existence many thousands of manuscripts of the gospels in the great days of Byzantine prosperity, between the fourth and the tenth centuries. There are now extant but a pitifully small number. Moreover, the amount of direct genealogy which has been detected in extant codices is almost negligible. Nor are many known mss. sister codices. The Ferrar group and family 1 are the only reported cases of the repeated copying of a single archetype, and even for the Ferrar group there were probably two archetypes rather than one. Family 1 is much smaller. Codices 1 and 1582 may be direct copies of a single archetype, and it is possible that 118, 209, and 131 are direct descendants from the same archetype. Codex 205 is a copy made at Bessarion's request from 209. Thus we have at most nine Ferrar mss. representing one exemplar, and five mss. of family 1 representing another; and even this result is doubtful. Apart from these two there seem to be no groups of mss. which are conceivably descendants of a single lost codex. There are cognate groups — families of distant cousins — but the manuscripts which we have are almost all orphan children without brothers or sisters.

Taking this fact into consideration along with the negative

result of our collation of mss. at Sinai, Patmos, and Jerusalem, it is hard to resist the conclusion that the scribes usually destroyed their exemplars when they had copied the sacred books. !!

COLLATION OF GREEK MSS. FOR MARK XI

It will be noted that the designations of the mss., which follow Gregory's system, are not all arranged in numerical order. This is because the numbers in our collations naturally pursue the order of the several libraries containing our mss.

EXCURSUS II

THE DATE OF THE GEORGIAN GOSPELS

Robert P. Blake

What is the date of the Georgian Scriptures? The answer we give to this question depends first on what we conclude to be the date when Christianity was first brought into Georgian territory, and secondly on the view we hold as to how the Georgian literary language originated.

The first information we have about the introduction of Christianity into Georgia is given us by Rufinus, whose trustworthiness is doubted by many scholars.¹ Rufinus tells the story of the miracles which accompanied the missionary activities of a Christian slave named Nina — in Georgian Nino(y) — who came into the hands of the heathen king of Georgia, Bakur. The conversion of the king took place in the days of Constantine. From Rufinus this story was taken over by the later ecclesiastical historians,² and in the tenth century a romantic version of the legend obtained wide circulation in Georgia under the title of მოქცევაჲ ქართლისაჲ (*Mok'c'evay K'art'lisay*), "The Conversion of Georgia."³ Another tradition attributes the conversion of the country to St. Gregory the Illuminator, the apostle of Armenia, and his disciples. This would fix it at

¹ Rufinus, *Hist. Eccles.* i. 10 (Migne, P. L. 21, col. 480B-482C). On Rufinus in general see H. M. Gwatkin, *Studies of Arianism*, 2nd ed., pp. 97-102, and A. Glas, *Die Kirchengeschichte des Gelasios von Kaisareia als Vorlage für die beiden letzten Bücher der Kirchengeschichte Rufinus*, Leipzig, 1914 (*Byzantinisches Archiv*, VI). If we grant that Glas has to some extent rehabilitated Rufinus, we must none the less follow the latter's statements with due caution.

² Socrates, H. E. i. 20; Sozomen, H. E. ii. 7; Theodoret, H. E. i. 24.

³ Full bibliography of the Russian and Georgian literature and monographs on this document in კეკელიძე, *op. cit.*, I, pp. 569 ff.; Djavakhishvili's study in his ძვ. ქ. საისტ. მწერ. (ტფ. 2nd ed., 1921, pp. 85 f.) was formerly the most important discussion of the problem, but this has now been superseded by Kekelidze's study in the მიმდმხილველი I, pp. 1-53 (see above, pp. 287 f.). We can afford to pass over the activities of the Apostle Andrew; see I. Džavakhov, Проповѣдническая дѣятельность Апостола Андрея и св. Нины въ Грузіи, ЖМНП 1901, v. 333 (January), pp. 77-113.

approximately the same date as that given in Rufinus's story.⁴ Thus two independent branches of tradition assign the founding of the Christian church in the country to the first half of the fourth century. No objection is to be made to this as a date for the appearance of Christian missionaries in Georgia, but there is no extraneous evidence whatever to show that at this early period Christianity became actually established in those parts.⁵ Christian bishops appear in Armenia before Constantine, but the conversion of the country came later.

"The Conversion of Georgia" can be summarily dismissed as a *Tendenzschrift* of the Grecophile period. The Armenian tradition, in the form in which it has come down to us, is both late in date and strongly biased.⁶ As we shall see, early Christian influence penetrated Georgia almost solely through Armenian channels,⁷ and that part of the assertions of the Armenian tradition we can safely retain,⁸ but other portions of that tradition are shown by indirect evidence to be less secure. The earliest historical document which has come down to us in Georgian, the "Passion of Queen Šušanik," by Jacob the Priest (c. 470),⁹ implies the existence in Georgian at that time of *acta martyrum* and of the Scriptures,¹⁰ and indicates that Christianity had made considerable progress in the country, although for political reasons a faction of the nobility had accepted Mazdaism. The substantial accuracy of this statement is not easily to be denied. Contemporary evidence from Palestine shows us the Georgians already present¹¹ in the monasteries of

⁴ See კეკელიძე, *op. cit.*, pp. 5 f., and especially N. Marr, Крещение армянъ, грузинъ, абхазовъ и алановъ святымъ Григоріемъ, ЗВО, 1905, pp. 66-148.

⁹ Critical edition by S. R. Gorgadze, იაკობ ბერგისი მე-Ⅴ საუკუნე წამებაჲ წმიდისა შუშანიკისი, ქუთაისი, 1917 წ., with valuable notes.

¹⁰ P. 7, ll. 4-5.

¹¹ In general on this topic see the book of A. A. Tsagareli, Грузины на Синаѣ и въ Св. Землѣ, СПб. 1888 г. (Православный Палестинскій Сборникъ, Вып. 10).

St. Saba¹² and St. Theodore,¹³ and expressly states that the liturgy was celebrated by them there in their own tongue. Procopius mentions a monastery of the Laz at Jerusalem.¹⁴ All this would enable us to fix 450 A.D. as a date before which the Scriptures were translated into Georgian.

Let us now consider the palaeographical and linguistic evidence which we have in Georgian itself. It is reasonably evident that the Armenian and Georgian alphabets are derived from a common original, but exactly what this original was is not easy to ascertain. The older theory that the Armenian letters were derived from some Aramaic source, and then revised with the help of the Greek alphabet, does not hold.¹⁵ For the Armenian script Marquart¹⁶ has shown that its history was much more complicated, and Meillet¹⁷ has suggested a strain of Péhlevi influence. That hybrid alphabets were in use in the Armenian area before the Christian era has been recently demonstrated by the parchments from Kurdistan published by E. Minns.¹⁸ The cardinal weakness of the old theory, however, lies in the fact that in the vowel-signs are to be seen

¹² A. A. Dimitrievskii, *Тутика*, Kiev, 1895, I, pp. 222–223.

¹³ Vita S. Theodosii, ed. H. Usener, 1890, pp. 45–46.

¹⁴ Procopii de aedificiis v. 9, 6–7, ed. Haury, III, 2, 164, 16–17.

¹⁵ This is the general statement in the tradition.

¹⁶ J. Marquart, Ueber den Ursprung des armenischen Alphabets in Verbindung mit der Biographie des hl. Mašt'oc', Vienna, 1917; an Armenian translation of this work has been published, Vienna, 1920.

¹⁷ Heinrich F. J. Junker, 'Das Awesta Alphabet und der Ursprung der armenischen und georgischen Schrift,' in *Caucasica*, Heft 2, 1925, pp. 1–91; Heft 3, 1926, pp. 82–139. Marquart had in general argued that the forms of the letters showed the influence of an Aramaic alphabet, but that they had been conventionalized and stylized under the influence of Greek writing and especially of the capital script. Junker, while accepting the second part of Marquart's thesis, makes out a good case for a Péhlevi origin of the characters. Much of the argument turns on the technicalities and peculiarities of the script of the Iranian idioms and must be judged by linguists; certain of the comparisons made of the Armenian and Georgian do not appear sound, but the general results of Junker's investigation seem convincing. Meillet suggested Péhlevi influence in his review of Marquart's book (*Rev. ét. arm.* I, fasc. 2, 1920, pp. 163–164). Much interesting material is contained in I. Djavakhishvili's *ქართული პალეოგრაფია* (Tiflis, 1927); but the general theses: (1) that the Georgian alphabet is very ancient and an independent development, (2) that it is not connected with the Armenian, (3) that many of the letters are derived from ligatures, hardly seem to me tenable. I hope to discuss the whole question in detail in another place.

¹⁸ *Journal of Hellenic Studies*, vol. 35, 1915, pp. 22 ff.

the clearest traces of Aramaic influence. This influence is evident for both Georgian and Armenian, sometimes in the same, sometimes in different, characters.¹⁹ Therefore we cannot say, as has often been maintained, that the languages of this district were first reduced to writing when Christianity came in, though it is by no means unlikely that the systematization of the local alphabets is connected with the appearance of the Christian faith.

Again, it is essential to realize that we have in the Old Georgian texts a literary language.²⁰ It is not a dialect native to one area, but it is the lingua franca of the upper class and the medium in which communications, oral and written, were carried on between various districts²¹ which spoke mutually incomprehensible languages. Dialectal forms appear, as do words derived directly from other neighboring languages, or from those tongues out of which the neighboring languages later arose. Yet the vocabulary of the texts is standardized to a very considerable extent, and morphology and orthography also appear to follow fairly stable rules. The time which elapsed between the introduction of Christianity and the date of our oldest manuscript fragments is insufficient for the completion of this process.

The essential uniformity of literary Old Georgian, however, does not imply that the language as we have it is in any sense a 'pure' one. Apart from the alien accretions (non-caucasian, or perhaps better 'non-japhetic,' to use a term coined by N. Marr), which are present in Georgian as in every other language, the philological analysis of Georgian, coupled with a comparison with the other allied or related tongues of the Caucasus, shows that on the southern slopes of the range we have to deal with three well-marked branches of a primal linguistic stock.²²

¹⁹ See above, note 17.

²⁰ It is a *κοινή*, which is superimposed upon, but has not supplanted, the dialects. See in particular N. Marr, К изучению современного грузинского языка, Leningrad, 1922 r.

²¹ Georgian has been until modern times the written medium of communication in Mingrelia and Abkhazia and in Swanetian territory.

²² The fundamental working out of this conception has been one of the great contributions which Professor N. Marr and his pupils have made to the scientific study of

The South Caucasian dialects which survive as spoken tongues at the present day are in no sense pure representatives of any single one of these three branches.²³ In some cases they are hybrids, in others a basic stratum has been subjected in varying degrees to the influence of the allied branches. Comparative studies of the different modern and ancient dialects have established with reasonable certainty the essential characteristics of each of the three groups. The most striking criterion for divergence lies in the treatment of the sibilant *s*. In the first group we find an *s*, which in the second is either represented by a spirant (*h*, or *y*) or else disappears entirely (*0*), while the third group has *sh* (*š*). Marr has accordingly termed these three branches respectively the 'sibilant,' 'spirant,' and 'his-sing' languages.²⁴ There can be no doubt that Georgian, fundamentally speaking, belongs to the first, or sibilant, group within these languages, but it has none the less been subjected to the influence of the other two branches at different epochs and to varying degrees.²⁵ To a certain extent this influence can be separated into its component parts by the help of phonetic and dialectal criteria. The older stratum antedates the formation of the ancient literary language and appears consistently in the modern dialects. The influences which operated at a later period were less pervasive and less extensive, and affected for the most part only limited regions within the Georgian area.²⁶

the Caucasus. His theory has naturally varied and altered from time to time as new materials turned up and new points of view presented themselves. A guide, in brief and compendious form, to the scattered and often enigmatic literature, is provided by the recently published list, N. Marr, *Классифицированный Перечень печатных работ по яфетологии*, Leningrad, 1926.

²³ Abkhasian and Swanetian belong to the first category, the rest of the group to the second.

²⁴ Compare the table appended to the conclusion of Marr's article, *Определение языка второй категории ахеменидских клинообразных надписей по данным яфетического языкознания* (*Записки Восточного Отделения Русского Арх. Общества*, т. xii, 1914, pp. 31-106).

²⁵ See in particular N. Marr, *Грамматика древнегрузинского литературного языка*, Leningrad, 1925, pp. III ff.

²⁶ To the first class of these influences belong for example two layers or currents which have penetrated into Georgian:

(1) A series of words which are akin either phonetically or actually to Swanetian (N. Marr, *Изъ поѣздокъ въ Сванію*, *Хр. Востокъ* II, 1 ff.; *Яфетическія названія деревьевъ и растений*, *ИАН* 1915, pp. 769-780, 821-852, 937-950).

Such studies as have been made of the modern dialects show that the Old Georgian literary language is fundamentally one whose home was in Eastern Georgia; it is most closely akin to the present-day K'art'lian speech (in the upper valley of the Kura and the Aragwa), but was probably reduced to writing in the form employed in the ancient manuscripts in Gogarene (Γογαρηνή) or Gogark' (to-day the Borčalo district south-east of Tiflis).²⁷ Until the first third of the sixth century after Christ this area was the political centre of Georgia. Political troubles, the conflict between Rome and Sassanid Persia, and the ensuing Arab invasion, led to the break-up of this centre.²⁸ New rallying points for the oppressed Georgian population were formed in the mountainous region further west and south,²⁹ and the foci of literary activity tended to yield to this westerly drift.³⁰ Once, however, the literary language had left its original home, it was affected by new influences — a new dialect and cultural currents different from those which had hitherto been dominant.³¹ At the same time it remained fundamentally what it had originally been — a dialect of Eastern Georgia, and the new surroundings only gradually altered certain of its more superficial characteristics. We by no means seek to imply that literary Old Georgian necessarily first came into being with the appearance of Christianity in the Caucasian area, as a similar

(2) A series of words related to the Lazo-Mingrelian tongues (N. Marr, Яфетические элементы въ языкахъ Арменіи, Извѣстія Академіи Наукъ, 1911-1914, 1916, 1918-19, *passim*), a stratum which strongly affected the Armenian. To the second class belong the attrition of the pronominal prefixes, the loss of the secondary vocalic element in vocalic noun-endings (-ება, -ობა for -ებოა, -ობოა), many categories of partially assimilated and erratically distributed loan-words, etc.

²⁷ A good summary of the arguments in favor of this is given by K. Kekelidze, ქართ. ლოც. ისტ. v. I, pp. 37 f.

²⁸ Cf. ო. ს. ჯავახიშვილი, ქ. ერის ისტ., v. 1, pp. 7 ff.

²⁹ A brilliant sketch of the later section of this development is given by N. Marr, in his Жизнь св. Григорія Хандэт'йекаго, ТР 7 (Спб. 1911), Дневникъ поездки въ Шавшетію и Кларджетію, pp. 1 ff. A general review of the situation in the Arab period in Djavakhishvili, II, pp. 1 f. and, for Armenia in general, J. Laurent, L'Arménie entre Byzance et Islam depuis la conquête arabe jusqu'en 886, Paris, 1919.

³⁰ This point has been particularly emphasized by Kekelidze, *op. cit.*, I, pp. 41 f.

³¹ Certain dialectal phenomena in the Adysh ms. perhaps reflect this change; see above, pp. 296 f.

lingua franca of the upper classes had existed before,³² but the needs of Christianity undoubtedly affected both the vocabulary and the style. Thus the literary language of the earlier period (after the sixth century) may be defined as an inter-provincial dialect, retaining an eastern base, but removed from its original milieu and exhibiting, as time goes on, a growing infusion of western forms; this idiom was stabilized but not petrified by being reduced to written form.

Nevertheless the divergence between the literary monuments and the tongue of the people never became so marked in Georgian as in Armenia, where almost the entire body of the literature underwent two, and probably three, conscious dialectal overhauls.³³ This process had made large progress by the middle ages: the literary language became so artificial that it had to be learned by authors in mature years as the medium of literary expression. In consequence an extensive corpus of grammatical literature arose in Armenian,³⁴ based upon Greek textbooks, which a similar need had brought into being. In modern times (and in part in the middle ages) this artificial, or classical, language was supplanted by the popular idiom gradually working up from below.³⁵ Georgian, however, was less differentiated, and hence did not become standardized or classicized³⁶; accord-

³² On this point in particular see N. Marr's brochure, *К изучению современного грузинского языка*, Leningrad, 1922.

³³ It is reasonably clear that the original literary dialect of Armenia must have been located in the south, as the earliest translations are those from the Syriac (Eusebius, Ephrem, etc.). Later on, after the Arab conquest, the literary centres shifted to the north and west, where the Grecophil school of teachers began its activity. With the destruction of the national kingdom in the 11th century, the centre of activity was transferred to Cilicia. All of these movements have left their trace on the manuscript tradition, but owing to the complete absence of early MSS. we cannot ascertain the true dialectal character of the early texts.

³⁴ Cf. N. G. Adonts, *Діонисій Оракійскій и армянскіе толкователи*, Petrograd, 1915.

³⁵ On this point many Armenists remain stubbornly blind. In one case the facts observed brought home later the true state of affairs, namely to J. Karst, *Historische Grammatik der kilikisch-armenischen Sprache*, Strassburg, 1900. The earlier chapters of this work appeared separately, but the palinode of the author is to be found on pp. 132 ff.

³⁶ The nearest approach to this came in with the neo-scholasticism of the 18th century, when the Kat'olikos Antoni sought to reintroduce a somewhat altered form of John Petritzi's style into Georgian literature. The old scholastic literature had been snuffed out by the invasion of the Mongols; the new shipwrecked on the popular ro-

ingly it was never unreceptive of new dialectal elements and to some extent gradually altered its form in accordance with its new dialectal surroundings. Hitherto it has been possible to trace this process in Georgian only in a general way, nor were the stages of the mutations definable, but owing to the discovery of the *khanmeti* palimpsest texts, referred to above,³⁷ new and unexpected light has fallen upon the history of the Old Georgian literary tongue, and we are now in a position to trace to some degree how its dialectal complexion was altered.

We have already mentioned these documents, but in order to explain the term here applied to them it is necessary to touch on certain phenomena of the morphology and syntax of the Georgian verb. The most striking peculiarity connected with this part of speech is that the regimen (that is, the cases in which the logical subject and the logical object of a verbal form respectively stand) varies in accordance with the tense employed. We should also point out here that the dative case in Georgian fulfils in addition the functions of the accusative and the locative.

The specific meaning of any verbal form is determined in Georgian, as in other languages, by various suffixes and prefixes attached to the stem. These are, on the one hand, the morphological elements which determine the limitation imposed on the given verbal form, or, in other words, the personal and tense endings of the verb, and, on the other hand, the elements which express the pronominal subject and object of the verbal form.³⁸ The formatives of the first category are for the most part suffixes, while the pronouns are largely represented by prefixes. Differences of mode (or better, 'aspect,' to use a term borrowed from the grammar of the Slavic languages) are expressed in Georgian by prefixing to the root the vowels *a*, *i*, *e*, which impart to the root a transitive-causative, a passive, and a reflexive sense respectively.

matic movement. Hence no grammatical literature appeared in Georgian until the 18th century.

³⁷ See above, pp. 288 f.

³⁸ The best and clearest exposition of this (from the point of view of the modern tongue) is by A. Dirr in his *Grammatik der grusinischen Sprache*, Wien o. J., pp. 68 ff.; also his *Einführung i. das Studium der kaukasischen Sprachen*, Leipzig, 1928, pp. 61 f.

To illustrate the statements just made, two tables follow, in which are set forth: (1) the regimen of the various tenses in Georgian; (2) the pronominal and objective prefixes used both in Old Georgian and in the modern language (on page 367).³⁹

<i>Tense</i>	<i>Regimen</i>	
	Logical Subject	Logical Object
I. Present, imperfect, optative, negative, imperative	nominative	dative
II. Aorist, subjunctive-future, imperative, philosophical present	dative pronominal (<i>man</i> in singular)	nominative
III. Perfect, future-subjunctive, impersonal verb, and reflexive forms	dative (<i>mas</i> in singular)	nominative

The new documents, which are unquestionably written in literary Old Georgian from the point of view of vocabulary and syntax, diverge strikingly from the normal texts in certain morphological particulars. The most important of these is that a different group of pronominal prefixes, partly subjective, partly objective, are employed. These appear in some instances before vowels where the normal texts do not employ them.⁴⁰ The pronominal categories as reconstructed from these texts present a distinctly different appearance.

	<i>Subjective</i>		<i>Objective</i>	
	Singular	Plural	Singular	Plural
1. pers.	ბჟ — before o i ბჟ by crasis	ბჟ — თ before o i ბჟ by crasis	მ —	ბჟ (ზ) —, მ —
2. pers.	ბ —	ბ — თ	მ —	მ —
3. pers.	0 — [ბ, 0]	0 — [ბ, ბ]	ბ —	ბ — ბ

2. pers.	χ —	χ — t'	გ —	გ —
3. pers.	0 — [ს, 0]	0 — [ნ, ს]	χ —	χ — ნ

³⁹ In the tables, when the subject is in the plural in regimens II and III, the case or form is the same in both types. The philosophical present, or (in Shanidze's terminology) permansive, is a form (confined to the 3rd person) which expresses continuous or customary action. The pronominal prefix მ h becomes ბ s before dentals or their palatalized equivalents, მ s before Tzischlaute, and disappears before vowels.

⁴⁰ For example, ბაქუნდებს for აქუნდებს; შეხეწიობს for შეგწიობს, etc.

The differences between the two systems may be summed up as follows:

(1) In the first person the subjective prefix is ზუ- *χu-* in place of ვ *v*; before following ი *i* it takes the form ზჳ *χü* by crasis.

(2) In the second person of the subjective category and the third person of the objective, prefixed ზ- *χ-* takes the place of ჰ *h* (respectively *s/š/0*) of the normal texts. ზ *χ* is retained before vowels, where ჰ *h* disappears in the normal texts.⁴¹ In addition the prefix უ- *u-* of the comparative forms of adjectives appears in the form ზუ *χu-*; e.g., ზუმჯობესი *χumjobeysi* for უმჯობესი *umjobeysi*, 'best.'

The appearance of these texts led to the solution of a riddle which had long perplexed Georgian scholars. In the colophon attached to his version of the gospels George the Athonite begs copyists to keep the text of his edition pure, and not to conflate it with the საბაწმიდური და ხანმეტი *sabacmiduri* and *khanmeti* texts.⁴² The sense of the first of these words was obvious; it refers to the monastery of St. Saba in Palestine, but what *khanmeti* meant no one was able to make out.⁴³ A. G. Shanidze now realized that the newly-discovered texts were what George referred to, and that the enigmatic name meant exactly what its component parts implied: ხან *khan*, the letter ზ *χ* and მეტი *meti*, 'more,' 'addition,' 'surplus.' The word signifies the text in which *khans* are added, and manuscripts of this type in George's day can have been no great rarity, to judge from his words. This showed, furthermore, that such texts were no sporadic phenomenon, but a well-recognized type.

To the significance of this discovery from the linguistic point of view we shall return below; we must now turn our attention to the chronology which Djavakhishvili has set up for his documents. He begins his argument with what is undoubt-

⁴¹ In other words the subjective prefixes are wholly different but the objective prefixes in part the same.

⁴² This colophon has frequently been printed, but the last and only critical edition is by A. Shanidze in his article, უძველესი ქართული ტექსტების აღმოჩენის გამოც, *Bull. Univ. Tifl.*, II, 1923, pp. 402-403.

⁴³ Shanidze enumerates a most amusing series of guesses, pp. 407-409.

edly the oldest of the three inscriptions containing khanmeti suffixes — that on the church at Bolnisi.⁴⁴ According to the “Conversion of Georgia” this church was built by a bishop Eliay (Elijah).⁴⁵ On somewhat conjectural grounds Djavakhishvili assigns this dignitary to the beginning of the fifth century.⁴⁶ He identifies the Bishop Davit’, mentioned in the inscription with the Bishop Davit’ of Bolnisi, whose name appears in the Armenian collection of documents known as the *Գիրք Թղթոց* Girk’ T’γt’oc’, “The Book of Letters,” as having attended the anti-chalcedonian council at Dvin at the beginning of the sixth century.⁴⁷ The inscriptions on the Church of the Cross at Mtskheta are placed by Djavakhishvili between the years 590 and 650.⁴⁸ In the latest of these the letter ð b *ban* has a slightly opened head, which leads him to believe that the change in its form began to take place at this period.⁴⁹ In the second place the same expression occurs in two of the Mtskheta inscriptions: *ձցօճ օցօճ meox iqav*, ‘be our intercessor.’ In the earlier inscription (that of the ypatozi *ῥπατος* [i. e. consul] Dimitre) the *ḅ χ* appears in the word *ḅօցօճ χiqav*; in the second (that of Adarnase) the *ḅ χ* is omitted *օցօճ iqav*.⁵⁰ This instability in the usage leads Djavakhishvili to conclude that the *ḅ χ* began to disappear in the first half of the seventh century, and he accordingly concludes that these palimpsests must have been written before that date and belong to the sixth century.⁵¹

Djavakhishvili’s argument in general and his chronology in particular have been sharply criticised by Hencko (Генко).⁵² He quotes, and agrees with, the present writer’s original sugges-

⁵² Hencko, pp. 35–36.

tion (contained in a letter to Professor Marr) that the date of the palimpsests should be fixed at about 750 A.D.⁵³ After castigating Professor Djavakhishvili for a number of careless or misleading statements and for twisting the sense of certain passages, Hencko points out the statement of Abraham (Abraam), the writer of the letter in the Girk' T'γt'oc' (whence Djavakhishvili derived the statement about Davit' of Bolnisi) that the list of bishops present at the council was not drawn from the original acts of the council, since these had been destroyed.⁵⁴ It was a retranslation from a 'Roman' (that is, Greek) list, which had been obtained from Edessa, and, says Hencko, is consequently worthless.⁵⁵ Hencko furthermore attacks the palaeographical part of Djavakhishvili's argument, which he considers to be entirely a priori, and to fail to distinguish between palaeographical and epigraphical evidence; further Hencko points out that the Sinai Codex 64 (864 A.D.),⁵⁶ of which he prints a photograph, shows in a number of cases the closed form of the letter *ban* and "almost" the same forms of *qar* and *vie*.⁵⁷ He shows further that Djavakhishvili fails to take into account the fact that in general in the palaeographical history of a script we become acquainted only with the main palaeographical centres and with the hands developed in them; we rarely know or can identify provincial, regional hands.⁵⁸ Hencko likewise remarks that all our old dated Georgian mss. are demonstrably either of Tao-Klardjet'ian or of Palestinian origin, and suggests that the home of the khanmeti texts was in Georgia proper or K'art'li.⁵⁹ They can have been no rarity in the days of George the Athonite, and in one instance at least (Eccl. Mus. no. 799) a codex survived more or less intact until the 14th century, that being the date assigned to the second, or upper, writing.⁶⁰

What measure of truth is contained in these contradictory views? We cannot be certain that Bishop Davit' of Bolnisi and the Davit' mentioned in the inscription are one and the

same person, but certain of Hencko's other strictures lack cogency. The accuracy of the episcopal list is not necessarily to be impugned, for Abraam insists upon two points: (a) the list obtained from Urha (Edessa) was an official translation; (b) not *all* of the names of persons or places could be recognized with certainty in their Greek guise.⁶¹ The name of Davit' and that of his see, however, are perfectly clear.⁶² The identification is, indeed, not certain, but it seems to be possible. Djavakhishvili's dating of the Mtskheth' inscriptions appears to me sound. As far as the palaeographical side of the argument is concerned, we must remember that the differences in ductus which inevitably exist between palaeographical and epigraphical documents of the same epoch are much less marked in the case of capital letters, which are drawn and not written. On the other hand, there can be no doubt that the palaeographical arguments derived from the forms of the letters are seriously damaged by Hencko's statements and by observations on Caucasian MSS. subsequently made by Č'ikobava.⁶³

Before proceeding to set forth my own view, I will sum up the points which the two scholars mentioned seem to me to have definitely determined. It is certain that the prefixes ხ ჯ ხუ ჟ were used in K'art'li during the years 590-650, but it may well be that the literary tradition began to waver after that period. The closed forms of the letters *ban*, *qar*, and *vie* are also found in those inscriptions, but the palaeographical tradition did not die out at this time, and is still observable in the oldest extant manuscripts.

In addition the following points can be urged. A careful

⁶¹ Ibid., p. 47.

study of the hand of the Sinai ms. (in the original)⁶⁴ and of the Bodleian fragment (from the excellent photograph in the writer's possession) leaves no doubt in my mind that the Bodleian ms. is the older of the two. In the first place the letters of the Bodleian ms. are of the epigraphic type. They are square; the vertical and horizontal axes of letters with bellies or bodies tend to be of equal length: but the characters in the Sinai ms. are rectangular, the vertical axes being longer than the horizontal. Secondly, in the Bodleian fragment the letters are widely spaced, while the letters in the Sinai ms. are written close together. Thirdly, in the Bodleian fragment the heads of the three letters under discussion are really closed, the top of the curve being joined to the top of the hasta by a hair-line, but this is not the case in the Sinai ms., where the curve frequently approaches close to the hasta,⁶⁵ but there is never any hair-line connecting them.

All these considerations lead me to date the Bodleian fragment considerably earlier than the Sinai ms., a century earlier in any case, and more probably (as I now think) about 700 A.D. Whether it should be put further back than this I cannot say, as the materials for comparison are lacking. In the second place Shanidze⁶⁶ has pointed out that in the Adysh Gospels we have traces of a third divergent system of pronominal prefixes in which the characteristic consonant is \mathfrak{z} *h*; to this we shall return below.⁶⁷ This observation shows beyond question that the Adysh ms. is a copy of an old ms. which has been revised in accordance with the later established orthography; and this receives additional confirmation when we compare the text of the Adysh ms. with that of the khanmeti fragments.⁶⁸ An unquestioned kinship exists between the two both in readings

⁶⁴ This was inspected by me during a visit there in April, 1927. A large number of the disputed letters were examined by all members of the party and by the *σκευοφύλαξ*, Father Ioakim.

⁶⁵ In about 30 per cent of the cases of the letter *b* and in about 15 per cent of the other letters.

⁶⁷ See below, p. 375.

⁶⁸ A careful comparison of the text in Mark and Matthew with the Adysh ms. was undertaken by B. H. Streeter and R. P. Blake. For the most part the fragments come from the parables, and are textually not very interesting.

and in vocabulary. We must accordingly infer that both the Adysh codex and the khanmeti fragments belong to a class of manuscripts not touched by the revisers who have left their traces in the Opiza and T'bet' Gospels. In other words we are dealing with a stratum of textual tradition which antedates the Grecophil movement, while the dialectal peculiarities in the case of the khanmeti texts point towards Eastern Georgia or K'art'li.

Over the interpretation of the khanmeti dialectal peculiarities another acrimonious controversy has arisen. Some years ago Marr presented the theory that since a number of words found in Old Georgian texts bear evident morphological and philological relationship to Swanet'ian forms, we must infer that at an earlier period Swanet'ian tribes, now confined to the mountain-locked valley of the Ingur, must have inhabited the slopes of the Anticaucasus, and in particular have dwelt in the mountainous district of Meskhia. Only in this way can the presence of such Swanet'ian forms in the literary language be explained.⁶⁹

This theory has been sharply attacked by Djavakhishvili, but his arguments in rebuttal are for the most part not very weighty.⁷⁰ The forms ხვ and ხ for the pronominal prefixes of the subjective category in the first and second persons actually occur in Swanet'ian,⁷¹ and as Marr had surmised that the original translation of the Scriptures might have been into Swanet'ian,⁷² the discovery of these texts led me to assume that we had here, if not a Swanet'ian text, at least one which employed Swanet'ian forms to a far greater extent than any which had previously been discovered.⁷³ Of this view I am no longer sure. My doubts are based on the fact that a large num-

ber of texts have come to light among the palimpsests in the Caucasus in which the pronominal prefixes are employed as in the khanmeti texts, but in which in place of ხ χ we find ჰ h. Shanidze, who has been making a special study of these texts, has termed them, by analogy with the expression khanmeti, ჰანმეტო *hañmeti* (from ჰან *hañ*, the name of the letter ჰ h).⁷⁴ Traces of a text of this type have been observed by Shanidze, as we mentioned above, in the Adysh Gospels.⁷⁵ Djavakhishvili⁷⁶ explains the problem as to how the ხ χ disappeared by assuming a progressive degeneration or attrition of the pronominal prefixes. He points out that *omnium consensu* the earliest Georgian literary monuments were characterized by prefixes of the *khan* type, for the roots \sqrt{ar} and \sqrt{slv} , *esse* and *ire*, still use, even in the modern dialects, the ხ in the second person of the present tense, where we have the forms ხარ, ხართ *χar, χart*, 'thou art,' 'you are,' and ხვალ, ხვალთ *χval, χvalt*, 'thou goest,' 'you go,' and he accordingly assumes that the prefixes in other verbal forms degenerated, while these remained. I must confess that this hypothesis seems to me highly doubtful. There is in any case a survival, but it is much easier to suppose that a different type of prefix came into use in the other forms, and not that the forms themselves wore down, a process which does not occur in Georgian.⁷⁷ I am convinced of the superior probability of Shanidze's explanation, that the areas in which literary work was carried on gradually shifted.⁷⁸ The data afforded by the dialectal distribution of the prefixes in modern Georgian tend to confirm this: the prefixes of the ხუ- ხ- χუ- χ- type are East Georgian.⁷⁹ Now it is reasonably certain that our early Christian texts, or in any case the earliest of which we have any definite trace, were composed in the

province of Gogarene (Γογαρηνή) or Gogark' (now the Borčalo district).⁸⁰ Later on the centre of literary activity seems to have shifted southward and westward into Meskhia, which may well have been the home of the 'haëmeti' texts.⁸¹ Unfortunately this area has become de-georgianized, and our knowledge of the older dialect of the district is practically nil. What evidence we have does not run counter to this theory, and I would also hazard the conjecture that the instability in the Adysh ms. of what are usually stable and basic 3 v's may possibly be due to Meskhian influence.⁸²

The importance of these dialectal documents is considerable in another respect: they show that we look at Georgian texts almost wholly through Tao-Klardjet'ian glasses.⁸³ We can infer that the process of stylistic revision was gradual,⁸⁴ and to some extent preceded the reconstitution of the text. The Adysh Gospels escaped the second half of the process, and it is noteworthy that from the textual point of view they are closely connected with the khanmeti fragments. The actual date of these latter documents is perhaps more important palaeographically than it is for textual purposes, for the fact that the manuscripts are written with the khanmeti peculiarities shows that they are descendants of the ancient version, whatever their date may be. I see therefore no reason for doubting that the Adysh ms. and the khanmeti fragments substantially represent the type of New Testament text current in Georgia about 600 A.D. and probably earlier, though I doubt if any of the fragments themselves are as old as this date.

⁸⁰ See above, note 27.

⁸¹ So Shanidze, *Bulletin Univ. Tifl.* II, 411.

⁸² Some evidence is afforded by the language of the Georgian epic Vep'khis Tqaosani by Šota Rust'aveli, but the uncertainties of the textual tradition make any deductions highly dubious. Cf. J. O. Wardrop in the Introduction to his sister's translation, *The Man in the Panther's Skin*, London, 1912, pp. viii-ix, and N. Marr, *Грузинская поэма «Витязь въ барсовой шкурѣ» Шоты изъ Рустава и новая культурно-историческая проблема. I. Племенная среда. II. Культурная среда и эпоха.* ИАН 1917, pp. 415-446, 475-506; see above, p. 297.

⁸³ A point insisted upon by Hencko; see above, note 51.

⁸⁴ A good instance of how expressions came to be replaced is found in the colophon of Cod. Jerus. 36, discussed by N. Marr, *Антиохъ Стратигъ, Плѣненіе Іерусалима персами въ 614 г.* TP ix (Спб. 1909), p. 69.

EXCURSUS III

THE HARCLEAN VERSION OF THE GOSPELS ¹

Silva New

Since the facts of the Armenian and Georgian versions of the gospels seem to show that there once was a Syriac text of Caesarean type, the apparatus of the Harclean version suggested itself as possibly preserving traces of such a text. This has led to a study of the marginal notes and the gospel text of that version, and to certain conclusions as to the problems of the Harclean text itself.

There is no adequate edition of the Harclean gospels with their complicated apparatus criticus. White's edition (1778) is drawn from two manuscripts (Oxford, New College 333 and 334), and the editor added, in notes at the end of the volume, some information about other manuscripts. In 1789 Adler ² published a discussion of the three Syriac versions which he knew, and added to the already known material the evidence of two manuscripts in the Vatican and of one in Paris. Since that time more manuscripts have been found, but no critical edition has combined all the evidence. As Adler's notes suggest, White's two manuscripts were in fact not so complete as to make another edition superfluous, and when in 1927 an opportunity presented itself to examine superficially all but four of the manuscripts hitherto catalogued, considerable variation showed itself among them in both text and apparatus. Judged by the completeness and distinctiveness of their apparatus or by the quality of their continuous gospel text, the following Harclean mss. appear to deserve chief attention:

¹ [The bearing of this Excursus on the views presented in the treatment of the Philoxenian and Harclean versions in J. H. Ropes, *The Text of Acts* (*The Beginnings of Christianity*, vol. III), 1926, and especially in respect to certain assumptions therein made without adequate discussion, will not be overlooked by the student of these subjects. J. H. R.]

As Adler's published list of variants had already indicated, many marginal readings found in other manuscripts are not included in the apparatus of either of the New College manuscripts. Some idea of how much might be gained from a complete edition of the Syriac apparatus which could be assembled from all the mss., can be had from the accompanying table (pp. 378-381) covering the relatively few Greek marginal notes in four manuscripts of the Harclean for the Gospel of Mark.

This table shows the incompleteness of the Greek marginal apparatus in these manuscripts; a similar amount of variation appeared in many of the other manuscripts examined. No one ms. is markedly superior to the others, and the evidence does not suggest that any one is derived directly from any other or even that any two have a near common ancestor. A cursory examination of the Syriac notes, including those which name the source of Old Testament quotations, gives the same result. In addition to White's edition, we have available a collation of the marginal apparatus of five mss. and photographs of two others.

The text also is not completely the same in the manuscripts examined. Aside from the transposition of variants as between text and margin, which occurs occasionally in all the manuscripts, there seems to be a real division of the text into two types represented by two groups of mss. Just what is the textual difference between them can be ascertained only by full collations, but it probably corresponds, at least partly, to the difference in the form of the colophon usually found at the end of the Gospel of John. The shorter form of the colophon is

found in the New College and Vatican manuscripts, and was published by White. The longer, published by Adler, has an extra sentence, and is found in the Paris ms., Syr. 55, as well as in Angelica, Syr. 3; Cambridge, Add. 1700; and others. It is noteworthy that the Angelica and Cambridge mss. have few or no traces of Syriac marginal notes, but this is not the case in one of the Paris manuscripts belonging to this group. It is not probable, therefore, that the loss of the margin corresponds to the variation in text; but little real light can be thrown on these questions until complete collations have been made.

From the available material, however, some points can be provisionally discussed, and we shall here consider (1) the interpretation of the colophon, (2) the nature of the manuscripts which Thomas of Harkel had before him, and (3) the relation of these to the text which he provided. The starting point must necessarily be the colophon.

(1) *The Colophon to the Gospels and its Interpretation*

What Thomas did seems to be this. A translator, whose name is not given but who according to the almost contemporary Moses of Aghel (perhaps ca. 550) was the chorepiscopus Polycarp, prepared for Philoxenus of Mabug a Syriac translation in the year 508. Then, in 616, 'Thomas' at the Enaton of Alexandria collated this version with Greek manuscripts. That this 'Thomas' was Thomas bishop of Harkel is nowhere stated in the colophon of the version, but the usual assumption that it was he is probably correct. The difficult and important question which arises is this: Did Thomas make a new translation, or did he merely copy out the text of Polycarp, adding variants known to him from Greek and Syriac?

The colophon runs as follows, the Latin version being based on White, with some corrections, partly drawn from Adler:

אלהים בם חלל אלה ואזחל
 אלהי תהיה מיתה ואזחל
 ממ חלה מהל חלה נא: א
 חלה חלה חלה חלה

Est autem liber hic quatuor
 evangelistarum sanctorum, qui
 translatus est e lingua Graeca
 in Syriacam cum accuratione
 multa et labore magno pri-
 mum quidem in urbe Mabug
 anno 819 Alexandri Macedonis
 [A.D. 508] diebus religiosi Mar
 Philoxeni confessoris, episcopi
 illius urbis.

Collatus est autem postea
 cum diligentia multa a me
 Thoma humili cum tribus ex-
 emplaribus Graecis valde pro-
 batis accuratisque in Enaton
 Alexandriae urbis magnae, in
 monasterio sancto Antoniano,
 quippe vel exaratio eius facit
 ad utilitatem animae meae
 aegrotae et omnium eorum qui
 cupiunt accurationem libro-
 rum sacrorum.

Item descriptus est autem
 et collatus loco praedicto anno
 927 ipsius Alexandri indictione
 quarta [A.D. 616]. Quanta au-
 tem opera et cura fuerit mihi
 in illo et sociis eius Dominus
 solus novit qui retribuet uni-
 cuique secundum opera sua in
 iudicio suo iusto et recto, in
 quo digni fiamus misericordiae
 ab eo. Amen.

Apart from minor variation and corruption, three important
 questions arise concerning the text of the colophon. (1) In the
 second paragraph there is variation between the readings

'duobus' and 'tribus exemplaribus.' The evidence of the marginal notes shows that 'tribus' is right. (2) In the second paragraph the last clause (beginning 'quippe vel exaratio') is omitted in White's manuscripts and in the two great Vatican codices. But it does not sound like an interpolation. Is the omission possibly an error of the eye in passing from **ܡܒܥܬܐ** **ܕܡܒܥܬܐ** to **ܡܒܥܬܐ**? It should be noted that in this sentence, not found in White, Adler translated **ܡܒܥܬܐ** by 'apex,' which gives no sense; but, as Professor Vaschalde informs me, it probably means 'exaratio,' the actual mechanical writing out of the codex. (3) In the last paragraph Adler translates **ܐܠܐ** by 'nimirum altera vice,' and White by 'deinde'; but both seem too strong, for **ܐܠܐ** is surely not much more than 'item,' and **ܡܐ** is no more equivalent to 'altera vice' than the Greek $\delta\epsilon$ would be.

Whatever text of this colophon be accepted, the meaning remains the same. A version or translation was made (**ܐܠܐ**) in A.D. 508 for Philoxenus. A copy of it was made by Thomas, and was collated by him (**ܐܠܐ**, $\acute{\alpha}\nu\tau\epsilon\beta\lambda\acute{\eta}\theta\eta$) with three (or two) Greek manuscripts. The date of this second writing out and collating (**ܐܠܐ** . . . **ܐܠܐ**) is given as A.D. 616. Inasmuch as the existing manuscripts contain a Syriac translation provided with a collation from at least three Greek and probably two Syriac codices, it would be reasonable to suppose that we have here the translation which the colophon assigns to the days of Philoxenus together with the fruits of the collation which it ascribes to Thomas.³

But soon after scholars began to study the Harclean version it was assumed, under the influence of statements made by late Syriac authorities, that the colophon meant more than this, and that Thomas had not only copied and collated, but had also revised, the version made in the time of Philoxenus. This view has become traditional and it has passed into the body of widely accepted critical beliefs that the Philoxenian version has been lost and that we possess only the revision of it by

³ This view is accepted by A. C. Clark, 'The Michigan Fragment of the Acts,' in *Journal of Theological Studies*, October 1927, p. 19.

Thomas. The custom, initiated by White and Adler, in pursuance of Thomas's own language, of calling the version 'Philoxenian' has been abandoned, and it is generally known as 'Harclean.'

Of recent years the distinction between Philoxenian and Harclean seemed to be confirmed by the work of the late Professor John Gwynn, of Trinity College, Dublin, whose view must be carefully stated.⁴

The earliest canon of the church of Edessa was probably the Diatessaron and the Pauline epistles. By the time of Rabbula (†435) this was no longer the case, and his revision (the Peshitto) contained the four gospels, the Pauline epistles, Acts, and the three major Catholic epistles. No early copies of the Peshitto include the four minor Catholic epistles or the Apocalypse, and the editio princeps of the Peshitto, published by Widmanstadt in 1555 from a manuscript brought from the East by the Syrian priest Moses of Mardin, contains only the books of this canon. Some late manuscripts of the Peshitto, however, do include the four minor Catholic epistles, and from these manuscripts the text of these epistles has been edited in all the later printed editions of the Peshitto.

In the Harclean version the manuscripts which contain Acts and the Catholic epistles include also the four minor epistles, and the relation between this Harclean text of the minor epistles and the text found in certain late Peshitto manuscripts is the problem which attracted Gwynn. He accepted as a datum the belief that Thomas of Harkel revised, and did not merely copy, the translation made in the time of Philoxenus. "Thomas of Harkel," he says,⁵ "who, in his colophon appended to the several divisions of his work, is himself the primary authority for all we know of his version of the New Testament, expressly and with exact detail of time and place describes it as being — not a fresh translation, but rather — a revision of a previous translation, modified by comparison with one or more Greek

⁴ John Gwynn, articles 'Polycarpus Chorepiscopus' and 'Thomas Harklensis' in the Dictionary of Christian Biography, vol. IV, 1887; Remnants of the Later Syriac Versions of the Bible, 1909; The Apocalypse of St. John, in a Syriac Version hitherto Unknown, 1897.

⁵ Gwynn, Remnants of the Later Syriac Versions, pp. xxiii ff.

texts." Therefore the situation, as Gwynn saw it, was as follows. Two versions of the minor Catholic epistles are extant, and the colophons of the Harclean version show that the minor Catholic epistles were included in the version made for Philoxenus. Since Gwynn was convinced that the translation in the Harclean manuscripts was the version of Thomas, it was obviously a natural hypothesis that the version bound up with the Peshitto was the Philoxenian. This view was confirmed by his observation that there is a close relationship between these two versions, and that in some cases the Harclean appears to be a revision, made in the interest of a literal rendering, of the more idiomatic Syriac of the other version.

Gwynn's investigations have undoubtedly proved that the version of the minor Catholic epistles in the Harclean manuscripts is based on that found in the later Peshitto manuscripts. His view, however, that the latter is the version made for Philoxenus is an hypothesis resting on the assumption that Thomas of Harkel made a revision, and that to him, and not to his predecessor, is due the peculiar Syriac style of the Harclean text. Doubtless, if this were so, the fact that the Harclean manuscripts contain a version of the minor Catholic epistles which is a revision of that found in the later Peshitto manuscripts would be almost mathematical proof that the version in the later Peshitto is the Philoxenian; but did Thomas of Harkel *revise* the Philoxenian version or did he merely *copy* it? Surely, the simplest interpretation of the colophon to the gospels is that Thomas copied the translation made in the time of Philoxenus and collated it with other authorities. The result of his collation is then to be found in the notes in the margin of the Harclean; the result of his copying is the text of the Harclean.

It is, indeed, possible that under some circumstances the phraseology of the colophon might be interpreted otherwise. *ἀντεγράφη καὶ ἀντεβλήθη* — the familiar Greek phrase — means 'was copied' from such and such an original, and then, after copying, 'was compared' with it again in order to see that the copy was correct. Any errors made in the process of 'copying' and found when it was 'compared' were corrected, and this correction constituted the usual *διόρθωσις* of a manuscript.

Such a result is chronicled by the colophon in the Codex Theodoraë (cod. 565), where, if Belsheim's collation can here be trusted, we read, 'Εγράφη καὶ ἀντεβλήθη ὁμοίως ἐκ τῶν Ἱεροσολόμων (sic) παλαιῶν ἀντιγράφων (sic). A similar, but not identical, case is that of a manuscript 'copied' from one exemplar and 'compared' with another. Thus the Codex Sinaiticus was copied from some manuscript of which we are told nothing, and many years later was collated, at least for parts of the Old Testament, with the 'codex Pamphili' or a copy of it, and the result was a series of marginal notes and actual corrections. But here the corrector, known as \aleph^c , was trying to change the text for the benefit of future scribes. In the Harclean version the situation is parallel to neither of those just mentioned; the scribe definitely says that he copied a Syriac text which he commends, and that he collated it with other manuscripts, especially Greek ones. Since the marginal notes mention variants for which they expressly refer to both Greek and Syriac copies, it would seem probable that they are, at least in large part, the product of the collation spoken of in the colophon. It is possible that the passages in the text included between asterisks and obeli may be revisions; but they may be passages in which the researches represented by the variants in the margin had made Thomas doubtful as to the right reading; usually they mark a non-ecclesiastical reading. This question cannot be fully treated until we have a critical edition of the Harclean, for at present it is clear that in some places the text and the margin have exchanged places, while in others asterisks or notes have been misplaced or have dropped out.

One further argument has to be considered. Gwynn draws attention to the fact that though we have no tradition that Polycarp translated any part of the Bible except the New Testament (and the Psalms?), there is a reference in the Syro-hexaplaric version of the Old Testament to a "version that was translated by the care of the holy Philoxenus."⁶ Using this as a clue, Ceriani took as Philoxenian certain fragments translated into Syriac from the LXX of Isaiah and found in Brit. Mus.

⁶ Gwynn, *Remnants*, p. xxxi; Field, *Hexapla*, II, p. 448. The note in the Syro-hexaplar codex at Milan stands at Is. lx. 6.

Add. 17106. Accepting this view, Gwynn argues that there is a similarity in style between these fragments and the minor epistles as found in later manuscripts of the Peshitto. The correctness of his judgment is one which only Syriac experts can discuss; but it is clear that the identification of the British Museum fragments with the translation made in the time of Philoxenus is somewhat problematical.

Therefore, with all respect for Gwynn's profound learning and penetrating scholarship, I submit that the most natural interpretation of the colophon does not support the theory that the Harclean text is essentially different from the Philoxenian, and that no evidence has hitherto been presented which forbids taking the colophon in its natural sense.

Thus far the discussion has been confined to the Harclean version of the gospels. The question of the Harclean Acts and epistles is different, and a single point must be added to the argument which has been urged with reference to the gospels. The notes in Acts differ from those in the gospels in one important respect; all of them are 'Western' in textual character (or, in the few cases in which they are not, the 'Western' reading is to be found in the text), whereas in the gospels they represent several types of text. A common interpretation of this has been that the text of Philoxenus in Acts was 'Western,' and that Thomas revised it to the Ecclesiastical standard, putting in the margin the 'Western' readings which he rejected from Philoxenus. If, however, the text of Philoxenus and that of Thomas are deemed substantially identical, another explanation must be found, for Thomas would hardly have adopted one method in the gospels and another in Acts. Again a colophon, in this case that appended to the Acts and Catholic epistles, furnishes our primary information:

Descriptus est (ܐܠܦܠܐ) autem ex exemplari accurato eorum qui versi sunt (ܐܦܠܐ) diebus (memoriae piae) Sancti Philoxeni confessoris, episcopi Mabug. Collatus est (ܡܠܦܠܐ) diligentia multa mea Thomae pauperis ad exemplar Graecum in Enaton (ܐܢܬܐܢ) Alexandriae, urbis magnae, in monasterio Antonianorum, sicut reliqui omnes libri, socii eius.

From this colophon it is clear that if we apply the same theory to Thomas's work on Acts that has already been applied in the case of the gospels, there is no difficulty. In the gospels Thomas says that he was using three Greek manuscripts; in Acts he says that he was using one. Therefore, in the gospels the margin, coming from three manuscripts of differing types, naturally has a mixed textual character; in Acts, being the result of a collation with one manuscript only, it has a homogeneous character.⁷

It is true that in some cases the readings of the minor epistles found in the later Peshitto manuscripts appear in the margin of the Harclean. But this is not always the case, and, in default of a complete investigation, the marginal readings in Acts and in the Catholic epistles seem quite as likely to represent the variants which Thomas found in his Greek manuscripts as in the case of the gospels.

(2) *The Marginal Notes*

At least three theories have been offered to explain the origin of the marginal notes in the Harclean version:

(1) That they were derived from those Greek manuscripts (doubtless from the library of the Enaton) which the colophon says that Thomas used.

(2) That they are 'Old Syriac,' at least in Acts. This was Zahn's belief. It gains support from the two facts that through the commentary of Ephrem we know of the existence of an Old Syriac version of 'Western' type and that the Harclean margin in Acts is 'Western.'

⁷ A third colophon, appended to the Harclean text of the Pauline epistles, was published (without translation) from the Mohl ms. at Cambridge, England, by R. L. Bensly, *The Harclean Version of the Epistle to the Hebrews*, Chap. xi. 28-xiii. 25, Cambridge, 1889. This Pauline colophon is longer than the others and deserves full critical investigation in conjunction with the other colophons and with those found in the Syro-hexaplaric Old Testament. It contains a statement (apparently about the codex from which the version made for Philoxenus was translated) which seems to have been drawn from the 'Euthalian' material (see J. H. Ropes, *The Text of Acts*, p. clii note 2). In the Pauline colophon it is a cause of suspicion that the writer refers to Thomas not as "me, miserable Thomas," but in the third person as "Thomas bishop of Mabog." The statement (J. H. Ropes, *The Text of Acts*, p. clxxvi note 1) with regard to varying use of *ethpacham* ('collatus est') in the Pauline colophon is subject to reëxamination.

(3) That they are readings of the Philoxenian text which Thomas rejected in revising that translation.

No one of these theories accounts for all the facts. The matter is more complicated. Luckily Thomas has given a few indications in the notes. He mentions, though unfortunately not very often, that a reading is or is not in one or more of three Greek manuscripts; why then should it be doubted that these three mentioned in the notes are identical with those referred to in the colophon?

Thomas also mentions an "old Syriac manuscript" and a manuscript "of Mar Xenaia [i.e., Philoxenus]." Probably these two are not the same, although the note on Mk. xi. 10 cited below seems to imply that the manuscript of Mar Xenaia was in Syriac. Can we identify the "old Syriac manuscript" from the few notes which mention it?

(1) On Matt. xxviii. 5:

In tribus exemplaribus Graecis et uno Syriaco, antiquo illo, non inventum est nomen 'Nazarenum'.

So far as is known, the insertion of 'Nazarenum' is a singular reading of the Harclean. From the evidence of this note, the 'antiquum' might be either the Peshitto or the version found in the Curetonian and Sinaitic Syriac.

(2) On Matt. xxvii. 35, and Mark viii. 17:

(Matt. xxvii. 35). Haec periocha prophetae non inventa est in duobus exemplaribus Graecis, neque in illo antiquo Syriaco.

(Mk. viii. 17). 'In cordibus vestris pusilli fide' non inventum est in duobus exemplaribus Graecis, neque in antiquo Syriaco.

In both these notes the bearing of 'antiquum' is again ambiguous, since the phrases stated to be absent from the "old Syriac" are found in neither the Peshitto nor the Evangelion da-Mepharreshe; but here the implication is that the reading was found only in the third Greek manuscript.

(3) On Luke xx. 34:

In exemplari antiquo est 'gignunt et gignuntur' sed in Graeco non est.

This sentence is found in the Evangelion da-Mepharreshe but not in the Peshitto. The Peshitto, therefore, is presumably not what Thomas refers to as "antiquum Syriacum."

(4) Finally, there is a note at Matt. xx. 28, not found in White's edition but quoted by Adler from the two manuscripts in the Vatican which he knew as 'Assemani I and II' (Vat. Syr. 267 and 268). Adler says that at the end of this verse they add:

Vos autem quaeritis, de pusillo crescere, et de maiore minoris esse. Introeuntes autem et rogati coenare, ne discubueritis in eminentibus locis, ne forte dignior te superveniat, et accedens coenae invitator dicat tibi, adhuc deorsum accede, et confundaris. Si autem discubueris in minimum locum, et superveniat minor te, dicet tibi invitator coenae, collige adhuc superius, et erit tibi hoc utile. Haec quidem in exemplis antiquis in Luca tantum leguntur (κεφαλαιῶ) LIII. Inveniuntur autem in exemplis graecis hoc loco, qua propter hic etiam a nobis adjecta sunt.

This reading is not found in this place in the Sinaitic Syriac or in the Peshitto, but is in the Curetonian. So far, therefore, as we can identify the 'antiquum,' it was similar to that which is extant in the Sinaitic Syriac.

(5) Finally, there is one reference by name to Philoxenus. On Mark xi. 10:

'Pax in caelo et gloria in excelsis' non in omnibus exemplaribus Graecis invenitur, neque in illo Mar Xenaiae.

It is generally assumed that this refers to the version made for Philoxenus: but it might with more probability mean a manuscript which had belonged to him, for the colophons never refer to 'the version of Mar Xenaia,' but to 'the version made in the time of Mar Philoxenus.' What version that manuscript represented we cannot tell from this single reference, but the Evangelion da-Mepharreshe reads 'pax in excelsis,' a variant cognate to that in the Harclean margin; and the Peshitto omits the phrase. Thus the codex of Mar Xenaia was probably not a copy of the Evangelion da-Mepharreshe, and may have been a copy of the Peshitto.

(3) *The Greek Manuscripts used by Thomas*

There seems to be no reason for not understanding the three Greek manuscripts mentioned in the colophon to the gospels to be the same as the three mentioned in various notes to the gospels.

What type of text did these manuscripts have? The only way to answer this question is to consider the notes in which the readings of Greek manuscripts are specifically mentioned.

(1) On Matt. xxv. 1:

'Sponsa' non in omnibus exemplaribus invenitur, et nominatim in Alexandrino.

This reading (*καὶ τῆς νύμφης*) is found in Greek manuscripts of the Caesarean group and in D etc. In Syriac it is found in the Evangelion da-Mepharreshe and the Peshitto. It is barely possible from the wording of the note that this reading was known to Thomas only in Syriac, but the natural sense is that he knew it in at least one Greek manuscript. He certainly had at least one Greek manuscript which omitted the reading. Such a manuscript might have been either Neutral, Alexandrian, or Ecclesiastical, that is any form of non-western and non-caesarean text. The Greek manuscript which contained it, if Thomas had one, was of the Caesarean type or else of that of Codex Bezae.

(2) On Matt. xxvii. 35:

Haec periocha prophetae non inventa est in duobus exemplaribus Graecis, neque in illo antiquo Syriaco.

The quotation from the Psalms is found in Greek only in Caesarean manuscripts and in Δ. It is present also in some Old Latin texts. Thomas had three Greek manuscripts, and says that two of them did not contain this reading. Again these two might have been of any character other than Caesarean.

(3) On Matt. xxviii. 5:

In tribus exemplaribus Graecis et uno Syriaco, illo antiquo, non inventum est nomen 'Nazarenum.'

This note gives us no information whatever on the point in question. Thomas found the reading in no one of his Greek manuscripts, and it is found to-day in no Greek manuscript, but is known only through the Harclean version. Its ultimate origin seems to be the usual text of Mk. xvi. 6.

(4) On Mark viii. 17:

'In cordibus vestris pusilli fide,' non inventum est in duobus exemplaribus Graecis, neque in illo antiquo Syriaco.

This reading is extant in Greek only in manuscripts of the Caesarean family, and again Thomas says that two of his three Greek manuscripts did not have it.

(5) On Mark x. 47 or 48:

In duobus exemplis Graecis 'filius qui filius est Davidis' inventum est.

The translation of this difficult variant is Adler's. His comment on the rendering 'filius, qui filius est Davidis' is: "nominativum his verbis indicare vult criticus." He continues: "hic est in duobus exemplis nominativus legitur ὁ υἱὸς Δαβὶδ. In tertio igitur suo exemplo legisse videtur Thomas vocativum υἱέ." In agreement with his two Assemani manuscripts Adler attaches this note to the phrase 'Jesu fili Davidis' in the text of verse 47. White, on the other hand, edits it with the point of reference attached to the phrase 'fili Davidis' in verse 48, and also renders the cited phrase, 'fili filii Davidis,' which, as Adler says, makes no sense. (White's 'tribus' for 'duobus' is an error.)

So far as Greek evidence is concerned, the question of reading is complicated in each verse. In verse 47 υἱέ is read by **SBCLΔ**, υἱός (ὁ υἱός) by **DKAΓΠ** fam¹³ Orig. In verse 48, υἱέ is the reading of **SBCLΔ**, υἱός (ὁ υἱός) that of **DF** 28 fam¹ fam¹³ Orig.

If, therefore, Adler's interpretation is correct, and if the attachment to verse 47 (with the Vatican manuscripts) is to be accepted, the note means that Thomas had one Greek manuscript of the Neutral or Alexandrian type and two of Caesarean or Ecclesiastical. If White's manuscript is right in fixing the note as belonging to verse 48, Thomas had one Neutral or Alexandrian manuscript and two either Caesarean or Western. A further collation of Hareclean manuscripts would probably settle the point.

(6) On Mark xi. 10:

'Pax in caelo et gloria in excelsis' non in omnibus exemplaribus Graecis invenitur neque in illo Mar Xenaiae; in nonnullis autem accuratis, ut putamus, invenimus illud. [Adler cites this in abbreviated form, ending with 'invenitur.']

This is still another reading which in Greek is extant only in Caesarean manuscripts. Note that here, as in (1), Thomas

states that he did not find it in "all" his Greek manuscripts. Apparently he found it in at least one.

(7) On Mark xii. 14:

'Dic nobis igitur' non invenimus in Graeco [Adler: 'Graecis'].

In Greek this reading is found only in DCMN. Therefore this note merely suggests that Thomas had no manuscript of the type of Codex Bezae in the gospels.

(8) On Luke xx. 34:

In exemplari antiquo est 'gignunt et gignuntur' sed in Graeco non est.

In Greek this is only extant in D and in Clement and Origen (so also in the Old Latin).

Besides the eight notes discussed above, seven others, all from the Gospel of Luke, will be found reprinted in J. H. Ropes, *The Text of Acts*, pp. clxiii-iv. In these Thomas states that the reading in question is not found in 'all' his manuscripts, but he does not distinguish between Greek and Syriac. It is therefore sufficient to observe that the character of the readings in these notes does not contradict the results already reached. In each the reading which Thomas did not find in 'all' — but by implication in 'some' — of his manuscripts is a Neutral or Caesarean reading. One further note (on Matt. ii. 17) points out that a reading different from that of the Harclean text is found in Thomas's Greek manuscripts; this is an Ecclesiastical reading.

Summarizing the evidence of these readings, it appears probable: (a) that Thomas had one Greek manuscript with a predominantly Caesarean text; (b) that neither of the other two Greek manuscripts which he had was of the type of Codex Bezae. They may have been both Neutral, or both Alexandrian, or one may have been of each type. The absence of Greek 'Western' readings in the margin of the Harclean in the gospels is as noticeable as is their presence in the margin of Acts. (c) He had an "old Syriac" copy akin to the Sinaitic Syriac; and (d) possibly he had a copy of the Peshitto which had belonged to Philoxenus.

It has not been possible to investigate completely the textual

character of each marginal note in the gospels; but a rapid survey indicates that the character of the readings is thoroughly in conformity with the evidence of the longer notes quoted in detail, that is to say there are Neutral, Alexandrian, and Caesarean variants, and it is certain that Thomas was influenced by texts of these types. The most striking point in studying the character of the short notes (which merely give variants, with no added comment) is that there are practically no Ecclesiastical readings in the margin; in the few cases where such do occur, a reading of a non-ecclesiastical type is to be found in the text. In these latter cases the suspicion arises of an exchange of text and note, such as has been described above as actually observable in Harclean manuscripts. The 'Western' variants, which are also found, all seem explicable as due either to a Caesarean source or to the 'antiquum Syriacum.'

EXCURSUS IV

THE RECONSTRUCTED CAESAREAN TEXT OF MARK,
CHAPTERS I, VI, AND XI

The following text, as we have reconstructed it, is not supposed to be identical with that of any manuscript which could at any period have been found in Caesarea; but we believe it to be closer to the general text in use in that city in the time of Origen and Eusebius than is any single extant witness. In constructing it account has been taken of all the manuscripts of this group which were used in the making of the Tables on pages 213 ff., of the quotations in the two Caesarean fathers, the fragments of the Palestinian Syriac, and the Berlin parchment fragment. No one of these has been habitually followed against the others of the group, and there are even a few cases in which a reading not found in the *Textus Receptus* is supported by Origen where nevertheless the reconstruction follows a third reading because of the support of other members of the family. The weight to be given in such cases to the evidence of Origen or Eusebius against the majority of Caesarean manuscripts is one of the points which need further study.

The apparatus here printed does not give the evidence on which we have based our decisions; that must be sought in the Tables, the quotations from Origen and Eusebius in the section on Patristic Evidence, and the collations in the pages dealing with the Syriac versions. The aim of our apparatus is different. (1) It includes variants which seem to deserve consideration as possibly Caesarean. (2) In a few cases the *Textus Receptus*, (Stephanus, 1550) contains a reading which is clearly not that of the Ecclesiastical Text, and in some of these the reading of the *Textus Receptus* is probably the Caesarean reading. When such Caesarean readings occur (supported by the *Textus Receptus*), we have given the Ecclesiastical reading in the apparatus, with indication of the members of the family which support it.

MARK I

1, 2 Αρχη του ευαγγελιου Ιησου Χριστου (καθως γεγραπται εν Ησαια
 τω προφητη· Ιδου αποστελλω τον αγγελον μου προ προσωπον
 3 σου, ος κατασκευασει την οδον σου· φωνη βοωντος εν τη ερημω,
 ετοιμασατε την οδον κυριου, ευθειας ποιειτε τας τριβους αυτου)
 4 εγενετο Ιωαννης εν τη ερημω βαπτιζων και κηρυσσων βαπτισμα
 5 μετανοιας εις αφεσιν αμαρτιων. και εξεπορευετο προς αυτον πασα
 η Ιουδαια χωρα και οι Ιεροσολυμιται παντες, και εβαπτιζοντο εις
 6 τον Ιορδανην υπ αυτου, εξομολογουμενοι τας αμαρτίας αυτων. και
 ην ο Ιωαννης ενδεδυμενος τριχας καμηλου και ζωνην δερματινην
 7 περι την οσφυν αυτου, και εσθιων ακριδας και μελι αγριον. και
 εκηρυσσε λεγων οτι Ερχεται ο ισχυροτερος μου οπισω μου, ου ουκ
 8 ειμι ικανος λυσαι τον ιμαντα των υποδηματων αυτου· εγω υμας
 9 βαπτιζω εν υδατι, αυτος υμας βαπτισει εν πνευματι αγιω. και
 εγενετο εν εκειναις ταις ημεραις, ηλθεν ο Ιησους απο Ναζαρετ της
 10 Γαλιλαιας, και εβαπτισθη εις τον Ιορδανην υπο Ιωαννου. και
 ευθεως αναβαινων εκ του υδατος ειδε σχιζομενους τους ουρανους και
 11 το πνευμα του θεου ως περιστεραν καταβαινον εις αυτον· και φωνη
 εκ των ουρανων ηκουσθη· Συ ει ο υιος μου ο αγαπητος, εν σοι ευδο-
 12, 13 κησα. και ευθυσ το πνευμα εκβαλλει αυτον εις την ερημον. και ην
 εκει επι ημερας τεσσαρακοντα και τεσσαρακοντα νυκτας πειραζο-
 μενος υπο του Σατανα, και ην μετα των θηριων, και οι αγγελοι
 14 διηκουνουν αυτω. μετα δε το παραδοθηναι τον Ιωαννην ηλθεν ο
 15 Ιησους εις την Γαλιλαιαν κηρυσσων το ευαγγελιον του θεου, και
 λεγων· Πεπληρωται ο καιρος και ηγγικεν η βασιλεια του θεου·
 16 μετανοειτε και πιστευετε εν τω ευαγγελιω. και παραγων ο Ιησους
 παρα την θαλασσαν της Γαλιλαιας ειδε τον Σιμωνα και Ανδρεαν

- αι ἀδελφαὶ αὐτοῦ ὡδὲ πρὸς ἡμᾶς; καὶ ἐσκανδαλιζόντο ἐν αὐτῷ. |
 4 καὶ ἐλέγεν ὁ Ἰησοῦς· Οὐκ ἐστὶ προφήτης αὐτίμος, εἰ μὴ ἐν τῇ πατ-
 ριδί τῇ ἑαυτοῦ καὶ ἐν τοῖς συγγενεῦσι αὐτοῦ καὶ ἐν τῇ οἰκίᾳ αὐτοῦ.
 5 καὶ οὐκ ἠδύνατο ἐκεῖ οὐδεμίαν ποιῆσαι δύναμιν, εἰ μὴ ὀλίγοις ἀρ-
 6 ρωστοῖς ἐπιθεὶς τὰς χεῖρας ἐθεράπευσεν. καὶ ἐθαύμασεν διὰ τὴν
 ἀπίστιαν αὐτῶν. καὶ περιήγεν ὁ Ἰησοῦς τὰς κυκλῶ κώμας διδασκῶν.
 7 καὶ προσκαλεσαμένους τοὺς δώδεκα ἀπέστειλεν αὐτοὺς ἀνα δύο,
 8 δούς αὐτοῖς ἐξούσιαν πνευματῶν ἀκαθάρτων. καὶ παρηγγείλεν
 αὐτοῖς ἵνα μὴδὲν ἄρῳσιν εἰς ὁδόν, μὴτε ραβδόν, μὴτε πῆραν, μὴτε
 9 ἄρτον, μὴτε εἰς τὴν ζῶνὴν χαλκόν, | μὴδὲ ὑποδεδεμένους σάνδαλια·
 10 καὶ μὴ ἐνδύσῃσθε δύο χιτῶνας. καὶ ἐλέγεν αὐτοῖς· Ὅπου ἂν εἰσελ-
 11 θῇτε εἰς οἰκίαν, ἐκεῖ μένετε ἕως ἂν ἐκείθεν ἐξέλθῃτε. καὶ ὅς ἂν τόπος
 μὴ δεξῇται ὑμᾶς μὴδὲ ἀκουσῇ τοὺς λόγους ὑμῶν, ἐκπορευόμενοι
 ἐκείθεν ἐκτιναξάτε τὸν χὸν τῶν ποδῶν ὑμῶν εἰς μαρτυρίον αὐτοῖς.
 12, 13 καὶ ἐξέλθοντες ἐκηρύσσον ἵνα μετανοήσιν, καὶ δαιμονία πολλὰ
 ἐξεβάλον, καὶ ἠλείφον ἐλαίῳ πολλοὺς ἀρρωστοὺς καὶ ἐθεράπευον
 14 αὐτοὺς. καὶ ἠκούσεν Ἡρώδης ὁ βασιλεὺς, φανερόν γὰρ ἐγένετο τὸ
 ὄνομα αὐτοῦ, καὶ ἐλέγον ὅτι Ἰωάννης ὁ βαπτιστὴς ἐγγηγερταὶ ἐκ
 15 νεκρῶν, καὶ διὰ τοῦτο αἱ δυνάμεις ἐνεργοῦσιν ἐν αὐτῷ. ἄλλοι δὲ
 ἐλέγον ὅτι Ἡλίας ἐστίν· ἄλλοι δὲ ὅτι Προφήτης, ὡς εἰς τῶν
 16 προφῆτῶν. ἀκούσας δὲ Ἡρώδης ἐλέγεν, Ὁν ἐγὼ ἀπεκεφάλισα
 17 οὗτος ἐστίν, Ἰωάννης· αὐτὸς ἐκ νεκρῶν ἠγερθῇ. αὐτὸς γὰρ Ἡρώδης
 ἀποστείλας ἐκρατήσῃ τὸν Ἰωάννην καὶ ἐδήσεν αὐτὸν καὶ ἐβάλεν εἰς
 φυλακὴν διὰ Ἡρώδιαδα τὴν γυναῖκα Φιλίππου τοῦ ἀδελφοῦ αὐτοῦ,
 18 ὅτι ἐγαμήσεν αὐτήν. ἐλέγε γὰρ Ἰωάννης τῷ Ἡρῳδῇ· Οὐκ ἐξεστὶ
 19 σοὶ τὴν γυναῖκα ἔχειν τοῦ ἀδελφοῦ σου. ἡ δὲ Ἡρώδιας ἐνεῖχεν
 20 αὐτῷ καὶ ἠθελὲν ἀποκτεῖναι αὐτόν· καὶ οὐκ ἠδύνατο· | ὁ γὰρ
 Ἡρώδης ἐφοβείτο τὸν Ἰωάννην, εἰδὼς αὐτὸν ἀνδρᾶ δικαίον καὶ
 ἀγίον, καὶ συνετήρει αὐτόν, καὶ ἀκούσας αὐτοῦ πολλὰ ἠπορεῖ,
 21 καὶ ἠδέως αὐτοῦ ἠκούε. γενομένης δὲ ἡμέρας εὐκαιροῦ, ὅτε Ἡρώδης
 τοῖς γενεσίῳ αὐτοῦ δειπνῶν ἐποίησεν τοῖς μεγίστασιν καὶ τοῖς

MARK XI

1 και οτε εγγιζουσιν εις Ιεροσολυμα, εις Βηθανιαν προς το ορος των
 2 Ελαιων, απεστειλε δυο των μαθητων αυτου | λεγων· Υπαγετε εις
 την κωμην την κατεναντι υμων· και ευθως εισπορευομενοι εις αυτην
 ευρησετε πωλον δεδεμενον εφ ον ουδεις ανθρωπων ουπω εκαθισεν·
 3 λυσате αυτον και αγαγετε. και εαν τις υμιν ειπη· Τι λυετε τον
 πωλον; ειπατε οτι Ο κυριος αυτου χρειαν εχει· και ευθως αυτον
 4 αποστελει ωδε. και απελθοντες ευρον πωλον δεδεμενον προς θυραν
 5 εξω επι του αμφοδου, και λουσιν αυτον. τινες δε των εκει εστη-
 6 κωτων λεγουσιν αυτοις· Τι ποιειτε λυνοντες τον πωλον; οι δε ειπον
 7 αυτοις καθως ειπεν αυτοις ο Ιησους· και αφηκαν αυτους. και
 αγουσιν τον πωλον προς τον Ιησουν, και επιβαλλουσιν αυτω ιμα-
 8 τια, και καθιζει επ αυτον. πολλοι δε τα ιματια εστρωννουν εν
 τη οδω· αλλοι δε στοιβαδας εκοπτον εκ δενδρων και εστρωννουν εν
 9 τη οδω. και οι προαγοντες και οι ακολουθουντες εκραζον λεγοντες·
 Ωσαννα τω υψιστω· ευλογημενος ο ερχομενος εν ονοματι κυριου·
 10 ευλογημενη η ερχομενη βασιλεια του πατρος ημων Δαβιδ· ειρηνη
 11 εν ουρανω και δοξα εν υψιστοις. και εισελθων εις Ιεροσολυμα εις
 το ιερον περιβλεψαμενος παντα, οφιας ηδη ουσης της ημερας, εξηλ-
 12 θεν εις Βηθανιαν μετα των δωδεκα. και τη επαυριον εξελθοντων
 13 απο Βηθανιας επεινασε, και ιδων συκην απο μακροθεν εχουσαν
 φυλλα ηλθεν εις αυτην ως ευρησων τι εν αυτη· ελθων δε επ αυτην
 και μηδεν ευρων ει μη φυλλα μονον, ου γαρ ην ο καιρος συκων, |
 14 ειπεν αυτη· Μηκετι εις τον αιωνα εκ σου μηδεις καρπον φαγη. και
 15 ηκουσαν οι μαθηται αυτου. | και ερχεται εις Ιεροσολυμα. και εισελ-
 θων εις το ιερον ηρξατο εκβαλλειν τους πωλουντας και αγοραζον-
 τας εν τω ιερω, και τας τραπεζας των κολλυβιστων εξεχεεν και

- 16 τας καθέδρας των πωλούντων τας περισσότερας κατέστρεψεν· και ουκ
 17 ηφien ινα τις διενεγκη σκευος δια του ιερου· | και εδιδασκε και ελε-
 γεν· Γεγραπται οτι Ο οικος μου οικος προσευχης κληθησεται πασι
 18 τοις εθνεσιν· υμεις δε αυτον εποιησατε σπηλαιον ληστων· και ηκου-
 σαν οι αρχιερεις και οι γραμματεις, και εξητουν πως αυτον απολε-
 σωσιν· εφοβουντο δε αυτον, πας γαρ ο λαος εξεπλησseto επι τη
 19 διδαχη αυτου· και οταν οψε εγενετο, εξω της πολεως εξεπορευοντο.
 20 παραπορευομενοι δε πρωι ειδον την συκην εξηραμμενην εκ ριζων·
 21 και αναμνησθεις ο Πετρος ειπεν αυτω· Ραββι, ιδε η συκη ην κατη-
 22 ρασω εξηρανθη· αποκριθεις ο Ιησους ειπεν αυτοις· Ει εχετε πιστιν
 23 θεου, | αμην λεγω υμιν, ος εαν ειπη τω ορει τουτω αρθηναι και βλη-
 θηναι εις την θαλασσαν, και μη διακριθη εν τη καρδια αυτου, αλλα
 24 πιστευη οτι α λαλει εσται, γενησεται αυτω οσα αν ειπη· δια τουτο
 λεγω υμιν, παντα οσα προσευχομενοι αιτησησθε, πιστευετε οτι
 25 ληψεσθε, και εσται υμιν· και οταν στηκητε προσευχομενοι, αφιετε
 ει τι εχετε κατα τινος, ινα και ο πατηρ υμων ο εν τοις ουρανοις
 27 αφησει τα παραπτωματα υμων· και ερχεται παλιν εις Ιεροσολυμα·
 και εν τω ιερω περιπατουντος αυτου ερχονται προς αυτον οι αρχι-
 28 ερεις και οι γραμματεις και οι πρεσβυτεροι, | και ελεγον αυτω· Εν
 ποια εξουσια ταυτα ποιεις; η τις σοι εδωκεν την εξουσιαν ταυτην; |
 29 ο δε Ιησους αποκριθεις ειπεν αυτοις· Επερωτησω καγω υμας λογον
 ενα· αποκριθητε μοι και ερω καγω υμιν εν ποια εξουσια ταυτα
 ποιω· το βαπτισμα το Ιωαννου απ ουρανου ην η εξ ανθρωπων;
 30, 31 αποκριθητε μοι· και διελογιζοντο προς εαυτους λεγοντες· Τι ειπω-
 μεν; εαν ειπωμεν οτι Εξ ουρανου, ερει ημιν Διατι ουκ επιστευσατε
 32 αυτω; εαν ειπωμεν Εξ ανθρωπων, φοβουμεθα τον λαον· παντες γαρ
 33 ηδεισαν τον Ιωαννην οτι προφητης ην· και αποκριθεντες τω Ιησου
 λεγουσι· Ουκ οίδαμεν· και αποκριθεις ο Ιησους λεγει αυτοις·
 Ουδε εγω λεγω υμιν εν ποια εξουσια ταυτα ποιω·
